Transistors were not available until 1947 and then not in production. High voltage breakdown silicon diodes such as the 1N5408 (3 A, 1 KV, plastic case) would not be available until around 1960. The "1Nxxxx" and "2Nxxxx" and (rare but there) "3Nxxxx" designations were done by the electronics industry, not by the military. During WWII the military had its own variation on vacuum tubes with labels of "VT-nnn" while the electronics industry used the civilian industry designations exsiting before USA's entry into WWII. The USA military stopped using the "VT-nnn" designator after WWII.

Many high-power vacuum tubes used manufacturer's own part designations which the electronics industry accepted so as to ease their own burden in the fantastic explosion of electronics parts that began with TV set production once the civilian 'radio' industry restarted after WWII.

> Of course a lot of these developments were done by private industry, not by military personnel. But the developments were a direct result of military needs and funding.

Almost ALL developments in electronics began as industry projects, even the IC. There is some controversy in the industry whether Intel or TI made the "first IC." Intel's first IC was for an Asian customer to use in a four-function calculator. Nearly all digital IC part numbers have number suffixes which follow the original TI line of "54" and "74" prefixes. Intel went on to gain a virtual monopoly on CPUs for PCs while there is just no stopping TI to date.

While RCA Corporation developed the first CMOS junctions (and ICs), the semiconductor industry here and in Europe developed the Advanced CMOS juntions having idle current nearly down to leakage current yet with clock speeds so high that power drain is specified by operating speed. TTL logic structures have specified idle time current drain; Advanced CMOS logic does not.

Major semiconductor corporations have their own part numbers for ICs, such as the one-"chip" PLL frequency source made by Analog Devices and favored by many QRP afficionados in amateur radio. Analog Devices grew out of the George Philbrick company which began with vacuum tube operational amplifier plug-ins (two tubes in a special holder which contained the circuitry).

Addenda: I've never seen any FT-243 holder quartz crystals in USA-made CB transceivers. There might be some among roughly a million CBs made in the USA (millions more born off-shore). This post was done on 6 May 2010.

73, Len K6LHA

Two things to differ: The USA Census has not yet been formally released
```

since the US Census Bureau is still requesting all to send in Census Forms and temporary Census workers are beginning to prepare to get ready to go to work to interview those who have not sent in forms.

The highest-ever number of USA amateur radio licensees occurred on midnight of 1 July 2003 at 737,938 total individual licensees.

A minor point to differ about was the scarcity of 'radio parts' for amateurs building at home and the overall home radio market size not being anywhere near as big as the consumer electronics market of now. I am somewhat familiar with the market scene since I was born in 1932.
:-)

In my previous post, I forgot to include the source of the various numbers not provided by W5ESE.

The current US population came from the "population clock" website:

http://www.census.gov/main/www/popclock.html

which is run by the US Census folks. I'm not sure how often it updates. Last time I looked it was 309,039,794

The license numbers came from the ARRL website, which is the source of all the ARS license numbers I've posted:

http://www.arrl.org/fcc/stats.html

As of April 9 2010, the number of current unexpired FCC-issued amateur licenses held by individuals was:

Novice	16,683
Tech	338,087
Tech Plus	15
General	152,796
Advanced	60,367
Extra	120,631
Total	688,579

which works out to about 1 ham for every 449 people in the USA.

73 de Jim, N2EY

Does anyone here done something like sending ASCII to a microcontroller which then emits morse code? I'm tinkering around with old telegraph sounders.

David-

I understand the old telegraph sounders made a clack-clack sound rather than a beep. They also used an earlier version of code than international Morse, where some characters had mini-spaces in addition to dots and dashes.

Either way, the solution may be similar. Use the ASCII code as an address for locating the timing required for each character, stored in a look-up table.

Use a basic timing subroutine. Call it once for a dot or a space. Call it three times for a dash. Before calling it, turn on the output keyer for Mark and off for Space.

If you didn't have an existing sounder, you could generate another timing interval that would repeat at an audio rate for the amount of time the Mark signal would be on.

Here's a webpage where a fellow has done something similar:

http://www.steampunkworkshop.com/

It's on the right hand side of the page, a link called "telegraph
sounder"

http://www.steampunkworkshop.com/telegraph.shtml

I'd note he should have used more and finer wire on his home made
sounder electromagnet. But technical issues aside, it's some gorgeous
handwork. Also he has a bit of software to convert a RSS feed to the
sounder, which is what you might be interested in.

I just think it's really cool to have a mix of 1840's technology
plugged into a computer.

Well that is basically how any CW radio software works David, Most digital programs (used for PSK, Olivia, RTTY and such now days) such as Digipan, Hamscope, DM-780 (Part of the Ham Radio Delux package) all these do CW..

Now with these programs you are sending from the keyboard so you are sending "Key-Code" not ASCII to the CPU. but if you re-direct the input to an RS-232 port using the DOS MODE command,,,, you can then send ASCII to the com-port selected for this job and the computer will send .- ... -.-. .. ..

That question was asked in another thread, sort of.. And I'd like to submit an answer

What makes a real ham, as opposed to something else, is a willingness to study and learn about the hobby, and to try new and different things.

For example.. After a whole lot of years doing the same thing.. I upgraded my license, and my radio, and then I discovered new modes.

Soem may say it's making your own hardwere... Well, at one time I do admit if you wanted to get on the air,, You had to home brew, but today that is only an option (I do make SOME of my own stuff)

Some say it's things like Morse code.. but in fact that makes a telegrapher, not a ham..And these days not even a telegrapher.

Some say it's ________ (you fill in the blank) but the fact is that there is so much about ham radio that I can not put it in a post, or even a series of posts.. It would take most of a book to list all the things you can do with ham radio.. The name of that book: Well.. Usually we ARRL members just call it "The Handbook" but the formal name is a bit longer.

That's certainly part of it.

I think the "real ham" is distinguished by a set of attitudes and actions that include what you wrote and a lot more.

For example, there's:

- friendliness to and support of other hams

- high standards of conduct, on and off the air

- setting a good example for both hams and non-hams

- technical and operational know-how

- fairness and true competitive spirit

- being a good neighbor and a good citizen

- respect for Amateur Radio traditions, history, and the contributions of the past, yet being open to real progress in the present and facing the challenges of the future.

I think the combination of all those things are what makes "a real ham".

A person can have lots of willingness to study and learn about the hobby, and to try new and different things, but if they lack those other things, I don't think they're "a real ham".

IMHO

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
    2.1 Netiquette guidelines
    2.2 Posting form requirements
    2.3 Guidelines on signature (.sig) files
    2.4 Guidelines on excessive quoting
    2.5 Guidelines on pointers to outside sources
    2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
    2.7 Guidelines regarding name-calling
    2.8 Guidelines regarding civility
    2.9 Other unacceptable topics

---

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are |
implied or derived guidelines for participation that are drawn from the |
above articles about overall Usenet culture and tradition. Two of these |
implied or derived guidelines are encapsulated in two basic rules that |
our moderation team uses to initially determine whether an article is |
appropriate for our newsgroup. They are restated explicitly here for |
clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A |

rule-of-thumb that our moderation team applies is whether the article mentions amateur radio, ham radio, some synonym for amateur or ham radio, some technique or practice of amateur or ham radio including closely related technical topics such as antennas or portable power, or regulatory politics that directly affect amateur radio. This rule-of-thumb is also applied to determine if an article in a thread has drifted too far off-topic. For example, articles that have drifted into general rants or monologues will probably be returned with a polite request to rewrite to include a reasonable amateur radio connection or angle.

Basic Rule #2: The article must not have excessive spelling, grammar, or logical argument errors affecting readability and understandability. The moderation team understands that clear, understandable, technical or expository writing is a skill that can only be perfected through a lifetime of focused training and practice. Because the moderation team does not want to hold submitters to a standard higher than what it can achieve itself, nor disrupt the newsgroup and discourage submitters by playing spelling or grammar police, it will only return for rewrite any article that cannot be reasonably understood by multiple moderators.

If it is necessary to return any article for a rewrite because the moderators have determined that it does not meet Basic Rule #1 or #2, please accept this constructive feedback in the manner in which it is intended. The moderation team offers its assistance to help rewrite any submitted article into a form that preserves its original intent and meaning, but is also on-topic, as well as readable and understandable by others.

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal

convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

  http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

Ever wonder what really goes on inside your radio and computer?
Has someone told you all sorts of nonsense about NPN and PNP "holes" in silicon, depletion zones, LC time constants, Millihenrys and so on???????

Here is what really happens!
There are a lot of little men running around inside, doingall the work.

For an example here is how a cursor works:

HTTP://2006.1-click.jp

Enjoy!

:)   ;)

That's one of the first places I looked and where I got the idea. However, what he did was have a circuit watch the keyboard LEDs. What I'm trying to do is make something that attaches to an RS232 port. That way, I can run a three or four wire cable from a server in a back room to wherever I decide to put my sounder. There are two ways I could do this. The first is cheap and dirty. It works by energizing the sounder coils whenever RTS is asserted. That would require special program -- not too tough, but won't be as flexible as in the second approach. The other is to buffer RS232 in a microcontroller, convert to morse code, then tap out the message. In effect, this creates a one-way serial-to-telegraph modem. That second approach is what has me most interested. Suppose you have a server writing logs to a serial port... See the sort of bizzare fun that can be had?

I have a couple vintage sounders. Hook a batter and key in serial with
a sounder. When the key is down, the sounder clicks down. Let go and
it clacks up. So, a dot is "click-clack" and a dash is
"click-wait-clack". I think the Mark and Space stuff has to do with the
fact that the line was always kept energized, thus, an idle line would
hold the sounder arm down. That way you'd know immediately if there was
a line fault. That would be a bit wasteful now, so I suppose I should
preceed each message with a very long dash to at least try to fake that
part.

Well.. if your license has expired.. Then you are NOT currently licensed.

So that is how it should be tabulated

Now. I will admit that when my ARRL membership expires I don't plan on renewing (What can I say.. I expect to move when my membership expires and I don't have the zip code for "That big hamshack in the sky" (At least I hope that's where I move to when my life membership expires)

Back to topic.. When it came time for me to renew.. I got a whole bunch of E-mails.. Many offered to take care of it no muss no fuss for $xx.yy.

The ARRL's said basically "CLICK HERE" to renew

Clicking took me to the proper page over at fcc.gov and ... A short time later a new document arrived in my mail box.

As I recall there is international Morse Code and American Morese code..
Two different codes, and one (American I think) is better suited to the
click/clackers and guess what.. That font of much knowledge

http://en.wikipedia.org/wiki/American_Morse_code

Has an article on it at the above link INCLUDING the code itself!!!!

Also called the Railroad code.. IT is not as suited to radio as International Morse code is.

As to the line running energized.. There are several reasons for this, Many countries the phone system keeps current flowing in the wires all the time, this is called "Sealing Current" and if you have the manual for an old 300 or 1200 baud modem lying about you can read all about it.

The reason for this is to PREVENT line faults, believe it or not. As well as instant detection of line faults.

Modern teletype (BAUDOT and later ASCII teletype machines) like the Type 15, 28 and 33 all used idle on MARK

One of the more interesting lengths of paper tape I used to have was punched by one of the national news wires one November back in what, 1963 (The 23th as I recall) You play the tape and it starts typing out routine items (I recall a farm report or some such but it's been many years since I played the tape) then suddenly the machine runs "OPEN" (Space) for a period and then the news flash.. Then it goes back to routine and again it runs open.. the operator intruppted sends "Go Ahead Dallas" and we read "The president is dead"

That's some tape.

The original Morse instrument was a device which used a scribe to
imprint a line on a paper tape which was moving past the scribe arm
under tension from a clockwork mechanism.

When the electromagnets were energized, the scribe would make a mark on
the tape. When they weren't, the tape would "space" past the scribe
point without being marked.

Ergo, "Mark" means current in the loop, "Space" means no current. The
early telegraphs were powered by batteries.

There is software available to do what you want to do: visit the Morse
Telegraph Club, http://www.mtc.org/ , for more information.

HTH.

73,

Bill W1AC

With most sounders, the sound of the armature going down is different from the sound going up, as you describe, so it's more than the time spacing.

> I think the Mark and Space stuff has to do with the
> fact that the line was always kept energized, thus, an idle line would

s
> a line fault.

Yes, but there were several reasons for the normally-energized series line systems.

1) The first systems were powered by wet primary batteries called "gravity" cells. (You can still make your own - all you need is copper, zinc, copper sulphate, water and a jar). Unlike most other kinds of cells, the gravity cells need a load for best results.

2) The primary cells required a lot of maintenance and care. With a normally-energized system, line batteries were needed only at the ends of a line; the telegraph offices in between would not need them (except a cell or two for local loops). A typical line battery would consist of 100 to 200 gravity cells (often half the cells would be at each end) and permit operation over lines of 100 to 400 miles, depending on the wire size and number of intermediate stations. (#9 or #6 iron wire was commonly used for telegraph lines). So you can see the advantage of not needing line batteries everywhere!

3) Besides making a line break obvious, operation up to a break could be had by grounding the line at the last convenient point before the break.

4) Normally energized circuits made duplexing, multiplexing and other systems easier to implement.

The wire telegraph was more sophisticated than some folks give it credit for being.

A telegraph story:

There was a railroad which had an important position open at the division office. Applicants were told to show up on a certain day in the outer waiting room, and wait to be called into the Superintendent's private office for an interview.

The outer waiting room was a busy place, with a telegraph sounder going continuously, various employees doing all sorts of tasks, and the Superintendent inside his private office with the door shut.

A number of applicants showed up, most with years of experience. Each handed their papers to the clerk, took a seat, and waited.

After all the chairs were occupied, a young man arrived - obviously not nearly so experienced as the others. He paused for a moment, papers in hand. Then he walked straight to the door of the Superintendent's private office, opened it, and walked right in, closing the door behind him!

The other applicants looked at each other in surprise and some amusement. Barging in on the Division Superintendent was the best guarantee of never getting any job! One waiting applicant said the word "greenhorn" and the others all nodded.

But a few moments later, the door of the Superintendent's office opened, and the Superintendent came out, followed by the young man. The Superintendent said: "Thank you all for coming, but the position has been filled." It was obvious that the young man had gotten the job they all wanted.

Some of the applicants started to protest, but the Superintendent just pointed to the telegraph sounder. It wasn't on an outside line. It was playing the same message over and over:

"If you can read this, come into my office"

Normally I do not do full back quotes but what you typed bears repeating.

I agree,, I kind of lumped a lot of that into the "Willingness to study"
but in another field I have often said that those truly blessed with the
ability have a need to "Pass it on" (Willingness to help)

The technicial ability is a result of the willingness to study

Respect.... Well.. We could discuss that some but yes, that should be
part of it too.

As to being open to real progress.. For many decades we have pushed the
progress forward.. to this day Hams still use better hardware than the
military in many cases... Why.. Because hams designed it, not military
engineers.

Though in fairness... Many of those military engineers are Hams.

My daughter's new beau works (or rather worked) for the Air Force.. In a
   manner of speaking he was a pilot.. He flew R/C planes.

==> COME EXPLORE THE NEW ARRL WEB SITE!

We'd like to welcome you to come and delve into the new ARRL Web site <http://www.arrl.org/>. After more than two years of work, the staff, officers and Board of Directors are excited to show you what's in store.

As you peruse the site, you'll notice it's set up a bit differently than the previous site. With the new site, we chose to focus on how you use Amateur Radio, instead of by departments here at HQ. For instance, in the "On the Air <http://www.arrl.org/on-the-air>" section, you'll find information on contesting, awards, Logbook of The World, international operating, special events, the QSL Bureau (both Incoming and Outgoing) and more. And in the "Public Service <http://www.arrl.org/public-service>" section, you will find information on emergency communication, as well as served agencies and involvement opportunities. We are aware that some parts of the site are not yet available. We ask that you be patient while we try to bring everything over to the new site.

<http://www.arrl.org> So go ahead -- take a look around! Make yourself at home on the Web site. We invite you to go ahead and set up your member profile while you're here. Once you log in, click on "Edit Your Profile <http://www.arrl.org/myarrl-account-management>" -- it's located right under the log-in area. Let us know what Amateur Radio activities you enjoy (and once you do, you'll see information about your chosen activities on our home page, personalized just for you). This is also the place where members can sign up to receive The ARRL Letter <http://www.arrl.org/arrlletter> and other e-newsletters, W1AW bulletins, license renewal notices, messages from your Section Manager and Director and more. You can join groups, add friends and even add a picture of yourself!

If you ever need help finding anything or if you encounter any problems, look for the "Having Trouble? <http://www.arrl.org/support>" link at the bottom of each page. Click it and report your problem; you will be contacted shortly with a solution. We hope you will enjoy this new Web site as much as we do here at ARRL Headquarters. Remember --

this is your Web site. Have some fun with it!

==> MIKE COREY, W5MPC, JOINS ARRL STAFF AS EMERGENCY PREPAREDNESS AND RESPONSE MANAGER

The ARRL is pleased to welcome Emergency Preparedness and Response Manager Mike Corey, W5MPC, to the Headquarters staff in Newington. Corey's major responsibilities include addressing the development and implementation of an organizational disaster response plan as well as an operational continuity plan, complete with supporting procedures and training. Corey also will play an integral part in the management of ARES�, and in future negotiations with served agencies with whom ARRL shares or creates Memoranda of Understanding. An Extra class licensee and an ARRL Life Member, Corey comes to the ARRL with almost 20 years of experience with emergency communications. Licensed since 1988, he has been involved with SKYWARN since 1991 and has attended basic and advanced SKYWARN training. He is the co-author of the ARRL Storm Spotter's Handbook, which is due out next month. Read more here <http://www.arrl.org/news/mike-corey-w5mpc-joins-arrl-staff-as-emergency-preparedness-and-response-manager>.

==> FCC NEWS: FCC LOOKS TO LOWER FEES FOR VANITY CALL SIGNS

The FCC released a Notice of Proposed Rulemaking and Order (NPRM) on April 13 seeking to lower the fee for Amateur Radio vanity call signs. Currently, a vanity call sign costs $13.40 and is good for 10 years; the new fee, if the FCC plan goes through, will go down to $13.30 for 10 years, an decrease of 10 cents. The FCC is authorized by the Communications Act of 1934 (as amended) to collect vanity call sign fees to recover the costs associated with that program. The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term. The vanity call sign fee has fluctuated over the 13 years of the current program -- from a low of $11.70 in 2007 to a high of $70 (as first proposed in the FCC's 1994 Report and Order). In 2007, the Commission lowered the fee from $20.80 to $11.70. The FCC said it anticipates some 14,800 Amateur Radio vanity call sign "payment units" or applications during the next fiscal year, collecting $196,840 in fees from the program. Read more here <http://www.arrl.org/news/fcc-looks-to-lower-fees-for-vanity-call-signs>.

==> SECTION NEWS: NOMINATIONS OPEN FOR KNIGHT DISTINGUISHED SERVICE AWARD

Each year, the ARRL offers an award to recognize someone who has served admirably as an ARRL Section Manager. The Knight Distinguished Service Award recognizes exceptionally notable contributions by a Section Manager to the health and vitality of the League. The first such award was presented to Joe T. Knight, W5PDY (now SK) in 2003 -- for whom the award was named -- in recognition of his exemplary service not only as the ARRL Section New Mexico Section Manager for more than a quarter century, but also for his willingness to share his knowledge and skills. For information on selection criteria and how to nominate a deserving Section Manager, click here <http://www.arrl.org/news/nominations-open-for-knight-distinguished-service-award>.

==> W1AW NEWS: HELP KEEP THE W1AW DREAM ALIVE

W1AW. It is the most famous call sign in the century-long history of Amateur Radio. To hundreds of thousands of radio amateurs, W1AW is synonymous with Hiram Percy Maxim -- the visionary who first recognized a need for a national network of Amateur Radio operators in North America, and who just a few years later saw a similar need for the worldwide federation that we now know as the International Amateur Radio Union (IARU). Amateur Radio without Hiram Percy Maxim would be like automobiles without Henry Ford or electricity without Thomas Edison. Without Mr Maxim, Amateur Radio probably would not exist today -- and if it did, it would be a pale shadow of the enriching endeavor we now enjoy.

The W1AW Endowment was established to provide a reliable source of funds for the operation and maintenance of the Maxim Memorial Station. "When we begin the budget cycle every year, it is a relief to know that some portion of the expenses related to W1AW will not have to compete for scarce budget dollars with other important ARRL programs," said ARRL Chief Executive Officer David Sumner, K1ZZ. "Thanks to generous members and supporters, the W1AW Endowment and the income it generates have grown." To help ensure that Hiram Percy Maxim's memory lives on to inspire future generations of radio amateurs, please consider making a donation to the W1AW Endowment. By doing so, you will help build a solid financial future for W1AW so that it can continue to fulfill its mission as Amateur Radio's flagship station. "When you visit ARRL and tour W1AW, you will see your generosity at work," Sumner said. "And every time you hear 'Whiskey-One-Alfa-Whiskey' on the air, you'll know that you had a part in keeping the dream alive." For information on how you can help keep the W1AW dream alive, click here <http://www.arrl.org/news/help-keep-the-w1aw-dream-alive>.

==> ARRL FIELD DAY : ARRL PUBLIC RELATIONS COMMITTEE TO HOST FIELD DAY WEBINAR

The ARRL Public Relations Committee -- in conjunction with the ARRL's Atlantic Division -- will host a "webinar" -- an interactive Web-based seminar, designed to facilitate communication between a small number of presenters and a large remote audience using the Internet. On Thursday, April 22 at 9 PM EDT, join ARRL Media and Public Relations Manager Allen Pitts, W1AGP, along with ARRL Field Day Manager and members of the League's Public Relations Committee as they explain how to use ARRL Field Day to bring attention to Amateur Radio in your area. Learn how to set up a Field Day publicity calendar, invite elected officials and dignitaries, get proclamations issued, post your Field Day event on local media outlets and community bulletin boards, get audio and video PSAs on local radio and TV stations, how to use newer social networks like Facebook and Twitter and more to draw people to your Field Day event. Click here

<https://www1.gotomeeting.com/register/932645064> to register for this informative, interactive Internet meeting.

==> ON THE AIR: MOONBOUNCE FOR EVERYONE -- COURTESY OF THE ARECIBO RADIO TELESCOPE!

Sending Amateur Radio signals to the Moon and back has never been easy. After roundtrip journeys of nearly half a million miles, even the most powerful signals generated by hams are exquisitely weak on arrival. Because of the equipment and expertise necessary for successful "moonbounce" operating, this facet of Amateur Radio generally has been confined to a small audience. But this coming weekend, even hams with very modest stations will have the opportunity to experience the thrill of moonbounce, thanks to the giant radio telescope at the Arecibo Observatory in Puerto Rico. Read more here <http://www.arrl.org/news/moonbounce-for-everyone-courtesy-of-the-arecibo-radio-telescope>.

==> SOLAR UPDATE

Tad "Though the Earth was cold and wet, the sky was clear and the Sun rose bright, placid and beautiful <http://www.literature.org/authors/dickens-charles/two-cities/book-01/chapter-03.html>"
Cook, K7RA, reports: Weakened sunspots faded away this week and we were buffeted with more geomagnetic instability, but without the dramatic geomagnetic storms of the previous week. The average daily sunspot numbers fell more than 20 points to 12.1, and the average solar flux dropped nearly three points to 75.1. April 11 saw no sunspots -- with group 1061 appearing April 5-10 -- and sunspot group 1062 showing April 12-14. By today, group 1062 should be gone and we may still see more days without sunspots. The predicted solar flux for April 15-18 is 75, 77, 78 and 79, then hitting 80 on April 19-24. The predicted planetary A index for April 15-19 is 5, 5, 12, 8 and 5. Look for more information on the ARRL Web site on Friday, April 16. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by Charles Dickens' A Tale of Two Cities <http://www.literature.org/authors/dickens-charles/two-cities/index.html> (Chapter 3).

==> THIS WEEK ON THE RADIO

This week, the ARRL Rookie Roundup (SSB) <http://www.arrl.org/rookie-roundup> is April 18. The TARA Skirmish Digital Prefix Contest, the Holyland DX Contest and the EU Spring Sprint are April 17. The Michigan QSO Party, the Ontario QSO Party and the YU DX Contest are April 17-18. The Run for the Bacon QRP Contest is April 19. Next week, the 10-10 International Spring Contest, the SP DX RTTY Contest, QRP to the Field, the Florida QSO Party and the Nebraska QSO Party are April 24-25. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the

ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/courses-training> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Xref: g2news2.google.com rec.radio.amateur.moderated:1869

The post earlier today in RRAM about the new address on the ARRL website for AR licensees piqued my interest.

I clicked -on the ARRL web page to look at the numbers.

One thing led to another, and I pulled up some state population numbers of states with roughly the same populations and compared their per-capita numbers.

Some quick numbers:

State	# of hams	State population	Ham/resident ratio
Alaska	3466	698473	1/201
Wyoming	1696	544270	1/320
Vermont	2137	621760	1/290
Guam	487	178430	1/366
Wake Island	1	300	1/300
DC	407	599607	1/437

What I found is that there is a significant problem in Washington,DC.

There seems to be a very low number of hams in DC for the size of its
population, both absolutely and per capita.
There are less hams per capita than any other state.
Even tiny Wake Island, way out there in the Pacific Ocean, has a
higher ratio.

There are all sorts of people with professional degrees in DC,
(lawyers, accountants,journalists,etc.)i.e. all of the chattering
classes.
Why do so few of the people in DC have any interest in technical
matters that would cause them to be hams?

This led me to look at the FCC Website and the Commissioners and
their personal staffs' biographies.
It seems they are all lawyers of one type or another.
Not a one who has any technical or operational electronics
experience.

Even the Chief of Amateur Radio Enforcement does NOT have an Amateur
license.

Could this have been a significant factor in the BPL fiasco of the
last few years?

This lack of technical experience or knowledge to me is a serious
problem.

How can the Commissioners their staff's at the FCC ,NTIA, and other
federal agencies adequately manage the nations telecommunications
infrastructure if they don't have any technical experience?

What is it about DC that causes a lack of interest in technical
matters?

What can be done about this problem?
Require the FCC Commisioners to hire Engineers on their staffs like
one congressman is proposing?
Require FCC commissioners to have some technical experience?

WHAT????

Agreed. But there's more to it than studying, A lot of things require practice in order to do well.

> The technicial ability is a result of the willingness to study

Partly - but it also is a result of doing. "Book learning" is great but it must be matched by practical know-how to do a radio amateur any good.

> Respect.... Well.. We could discuss that

Might as well discuss it.

I think that depends on how you define "better hardware".

Military stuff has to be as rugged and dependable as possible, in all sorts of environments including hot, cold, humid, vibration, shock, high altitude, EMP, etc. Most ham gear doesn't have to be able to withstand anything like the environment the military demands.

Military stuff also has to be capable of things a lot of ham gear doesn't, such as encryption, operation from 24-28 volts DC, remote control, ALE, spread spectrum, interconnection with other military systems, automatic operation, etc. Often the "radio" is simply part of a much larger system.

There's also the military requirements of documentation, training, domestic sourcing, etc.

The one place where ham gear is probably "better" is in price. But that's to be expected because the requirements are so different.

Many hams know that the WW2 BC-610 transmitter was really a repackaged Hallicrafters HT-4 amateur transmitter. Ham gear went to war!

But what's sometimes not emphasized is that they didn't just change the label on the HT-4 and make it the BC-610. What really happened is that the transmitter went through a considerable amount of testing and rework before it could meet military specifications. For example, things like vibration and shock were big issues; the original HT-4 final plate tuning capacitor simply fell apart in field tests.

And those were WW2-era requirements - modern military specifications are even tougher!

I've been to DC many times (it's only 135 miles from Philly).

Here's what I've noticed about the place:

1) Many of the movers-and-shakers don't actually live in DC. They live in VA and MD, and commute.

2) Many of those who live in DC are students, foreign nationals, etc.

3) Many of those who live in DC permanently are very poor. Crime is high and conditions are terrible.

4) DC is essentially an urban area from border to border. Even in the nicer parts it's not that ham-friendly compared to suburbs, small towns and rural areas. Urban areas tend to have a lower ham population. (How many hams actually live in Manhattan or downtown SF?

5) Regulatory agencies are usually headed by political appointees. That's the nature of the game since Andrew Jackson described the "spoils system." The FAA isn't run by all pilots; the FRA isn't run by all train drivers, etc. (In fact, if the FCC were run by hams, some

might claim they had a conflict of interest).

6) There are statistical variations all over the place in the license-counts table. The difference is 2 to 1 in the numbers you cited between the highest and lowest hams-per-capita areas. Look at the table other ways and you'll see other variations.

For example, compute the percentage of hams in each state that are in each license class, and you'll see wide variations from state to state. Last time I looked, CT had the highest percentage of Extras, and CA had the highest percentage of Technicians. Other variations are all over the place.

I agree that those who make the rules should have a background in what they are making the rules for. But that sort of thing is usually left to "staff" in my limited experience.

> See the sort of bizzare fun that can be had?

Absolutely!

I would think something like this would be fairly easily done in an
Arduino or basicStamp.

The hardware would be near trivial -- get the thing some power, provide
a RS-232 driver, and a open-collector transistor to drive the sounder.
(what kind of voltage/current does a sounder want?)

You'd have plenty of spare output lines (since you only need one to
drive the sounder!) so you could generate a keyed tone on another
output for driving a speaker, useful once you find out why they
dropped sounders like a hot rock once someone invented the BFO(grin)!

> (lawyers, accountants,journalists,etc.)i.e. all of the chattering
> classes.
> Why do so few of the people in DC have any interest in technical
> matters that would cause them to be hams?

How many of the DC professionals actually live in the District? How
many DC professionals interested in amateur radio choose to live in the
city when it might (might!) be a lot easier to put up a decent antenna
in an outlying suburb?

If you ran the numbers including both the District and ZIP codes in
adjoining Maryland and Virginia, would you get something similar to the
other states?

If you ran the numbers for not the entire state of Illinois, but just
within the city limits of Chicago, would you get something similar to
what you get for DC?

Amateur Radio Newsline(tm) Report 1705 - April 16 2010

Amateur Radio Newsline report number 1705 with a release date of Friday, April 16th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds to a devastating earthquake in China, more on the ham radio activation following the Mexicali earthquake, the FCC headquarters in Washington is evacuated due to an alleged bomb scare, GAREC 2010 to be held in Curacao and s mid-West radio club receives accolades for its work in public service and emergency response work Find out which club it is on Amateur Radio Newsline(tm) report number 1705 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS RESPOND TO CHINA EARTHQUAKE

Ham radio is responding to the China's Qinghai province earthquake. The Chinese Radio Sports Association has asked that the frequencies of 7.050 and 7.060 MHz on 40 meters be kept clear for emergency ham radio communications following a devastating shaker that hit the provinces Yu Shudistrict.

The earthquake measuring 7.1 on the Ritcher scale occurred on the morning of Tuesday, April 13th. It left 589 people dead, nearly 10,000 injured and 10,000 families needing to be resettled due to 99% of houses in the area having sustained severe structural damage.

A number of radio amateurs are already active in supporting the rescue and recovery efforts including BG9UA, BG9UP and BG9UO. The emergency communication team of Anhui Amateur Radio Society, led by BG6CEV was flying to Qinghai on April 15th to bring in much needed communication equipment.

The Yu Shu diastrict is located in a plateau with temperatures fall to -5 degrees Celcius making conditions bad for those without shelter as well as hampering rescue efforts.

(BA1RB - CRSA Coordinator of the IARU Region 3 Disaster Communications Conmmittee via Jim Linton VK3PC)

**

RESCUE RADIO: HAM RESPONSE TO MEXICALI QUAKE FOLLOW-UP

A follow-up to last weeks story regarding ham radio involvement in the Easter Sunday earthquake that rattled the city of Mexicali as well as the Imperial County, California, area. Bill Pasternak, WA6ITF, is in the newsroom with the latest:

--

According to Dennis Ambrose, WB6CGJ, hams in Imperial County immediately activated an emergency net on the San Diego Amateur Radio Association's 147.15 Mhz Mt. Laguna repeater. Ambrose, who is ARRL Assistant Section Manager for Imperial County says that landline and cellular telephone phone communications were not dependable and that electrical power was out in many locations.

Ambrose says that ARES and RACES members were among the first to arrive at the Imperial Emergency Operations Center. They handeled traffic regarding damage to buildings, bridges, roads, water treatment plants, and businesses. All of this was passed via amateur radio to the county Fire Chief and the director of the county's Office of Emergency Services.

SATERN, the Salvation Army Team Emergency Network, sent in operators from the San Diego, San Bernardino and Riverside counties to assist in communications for the shelter and mobile feeding units. It activated its SATERN Net using generator power and operated from one emergency shelter were twenty seven people stayed Sunday evening. This, due to extensive earthquake damage to their apartment complex.

Ambrose says that ham radio operators remained at their duty stations through Wednesday, April 7th when the county shifted to recovery status.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom, in Los Angeles.

--

Amateur radio operators, from ARES, RACES, SATERN, the American Red Cross, the Imperial County Irrigation District as well as individual hams not affiliated with any group took part over the three and a half days of emergency activation. There's s till no word from south of the border as to whether hams in Mexico were called out in response to this quake. (AD6VI, ARNewsline(tm))

**

RADIO THREAT: FCC EVACUATED DUE TO BOMB THREAT

A threat leads to the evacuation of the FCC's Washington headquarters. Norm Seeley, KI7UP, has the details:

--

The Federal Communications Commission was evacuated Wednesday, April 7th. This after what news sources report as an apparent bomb threat that forced staffers to outside the building in 90 degree heat for over two hours.

The building known as The Portals is located in Southwest Washington. It was evacuated around 9:30 a.m., according to FCC spokesman David Fiske. He said employees returned to the building around 11:30 a.m.

Throughout the afternoon, speculation in the media mounted that the FCC headquarters was evacuated because of a bomb threat. Details about the nature and timing of the threat were unavailable, though one source said staff was out for about two hours and that bomb-sniffing dogs were dispatched.

Fiske did not confirm that a bomb threat was the cause of the evacuation and referred inquiries to the Federal Protective Service. E-mail releases from the commission resumed mid-afternoon.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

According to the newsletter T V Business, bomb threats in Washington, D.C. are something of a regular occurrence. It notes a WTOP report that the Pentagon City Metro station was shut down briefly April 3rd for such a threat. Another was reported at World Bank headquarters in January. (RW, The Hill)

**

RESCUE RADIO: GAREC-2010 DATES ANNOUNCED

The Global Amateur Radio Emergency Communications Conference, or GAREC, will be held in Curacao, in the Netherlands Antilles on the 11th and 12th of October. The annual conference is for those engaged in providing emergency communications with this years theme being "Learning Through Practicing.".

The overall purpose of Global Amateur Radio Emergency Communications Conference is to exchange information and experiences between radio amateurs and groups interested in emergency communications. This years is gathering is being organized by the Dutch Amateur Radio Emergency Service and the IARU Netherlands Antilles national radio society VERONA.

The program is yet to be finalized however the organizers are keen to include first-hand accounts of emergency communications following the devastating Haiti and Chile earthquakes. More is on line at www.garec.net (VK3PC)

**

RADIO HONORS: LINCOLN CLUB HONORED

The Lincoln Amateur Radio Club has received the Nebraska Volunteer Group of the Year Award. This, at the Nebraska Impact Awards Luncheon in Omaha on, Friday, April 9th.

The award to the Lincoln Amateur Radio Club comes only about two weeks after it responded to a major telephone outage that affected south east Nebraska. That story also was well covered by local, statewide and national press as wel as here on Amateur Radio Newsline.

The Lincoln Amateur Radio Club's Jeff Bennet, W�WKP, and ARRL Lancaster County Emergency Coordinator, Reynolds Davis, K�GND, were present to accept the award. (K0AIZ)

**

RADIO LAW: FCC WANTS AUTHORITY TO LOWER VANITY FEE BY 10 CENTS

Still with FCC news, word that the regulatory agency has released a Notice of Proposed Rulemaking and Order seeking to lower the fee for Amateur Radio vanity call signs by 10 cents. Currently, a vanity call sign costs $13.40

and is good for 10 years. If the FCC's new fee structure is approved the new fee will go down to $13.30 for 10 years.

According to the ARRL, over the 13 years of the current program, the vanity call sign fee has fluctuated from a low of $11.70 in 2007 to a high of $70. The latter as first proposed in the FCC's 1994 Report and Order. In 2007, the Commission lowered the fee from $20.80 to $11.70 but its slowly been creeping upward ever since

The vanity call sign fee is payable both when applying for a new vanity call and also when renewing it for a new term. The FCC said it expects to receive some 14,800 amateur radio vanity call sign applications during the next fiscal year and collecting $196,840 in fees under the program.

MD Docket 10 dash 87 carries a commentary cutoff date of May 4th. Reply comments are due no later than May 11th. Instructions on how to comment on this or any other FCC action is available on the FCC Web site at http://www.fcc.gov/cgb/consumerfacts/howtocomment.html (FCC, ARRL)

**

RADIO LAW: FCC GRANTS DALLAS TEXAS AREA 97.113 WAIVER REQUEST

The Federal Communications Commission has granted a Part 97.113 waiver request by Mark Fulmer, KE5PHU, who is Preparedness Coordinator the Tarrant County Public Health Department in Dallas, Texas. This, to use hams employed by the agency in several upcoming bio-terrorism preparedness drills.

Scot Stone is the Deputy Chief, of the Mobility Division of the FCC's Wireless Telecommunications Bureau. In granting the request Stone wrote that the public interest is served in facilitating the April 16, May 21, June 18, July 16, August 20, September 17, October 15, November 19, and December 17 public safety exercises and thus warrants this limited waiver of Section 97.113(a)(3). The waiver permits Fulmer and a dozen other named hams to take part in these monthly drills. (FCC)

THE BPL WAR: MANASSAS VA TO END BPL SERVICE JULY 1

It's a big victory over QRN. This with word that the once highly touted

Broadband over Powerline experimental project in Manassas. Virginia, will soon be no more as the Manassas City Council votes to discontinue the service as of July 1st. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

The Manassas City Council's action came soon after the Manassas Utilities Commission recommended it do so. Even with all of the pre-publicity it had received, BPL in Manassas proved to be what is best described as a flawed business plan. While the basic concept of using existing utility lines to also transmit broadband data seemed good at the outset, it never really gained a favorable level of subscribership. By the time the vote to discontinue the service came, BPL in Manassas was only serving about 560 residents and businesses.

In its report to the City Council, the Manassas Utilities Commission said that the total revenue brought in by BPL for the current Fiscal Year was only about $186,000. On the other hand, the expense of keeping up the city owned system was costing the ratepayers more than $351,000. This resulted in a net loss of almost $166,000 to keep the system in operation.

The July 1st termination date was chosen to give current BPL subscribers about three months to switch to other Internet Service Providers. Since its inception, the BPL system has been a thorn in the side of hams and SWL's in Manassas by raising the overall noise floor of most of the high frequency bands, and making all but the strongest radio signals impossible to hear.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.

--

The Manassas decision to shut down its BPL system tends to prove once again what critics in the financial world have been saying for years. That being Broadband Over Powerline may look good on paper but in the world of finance it really is a flawed business plan. (ARRL)

**

RADIO POLICY: FCC CITES IPAD AS ANOTHER REASON FOR BROADBAND SPECTRUM

The FCC is using the high level public response over the release of Apple's iPad to put in a plug for finding more spectrum for wireless broadband use. In a blog posting on April 2nd, the FCC's chief spectrum policy analyst, Phil Bellaria teamed with deputy Wireless Bureau Chief John Leibovitz to pointed to the long lines at Apple stores as evidence that broadband is going mobile fast and in a big way.

According to Belllaria and Leibovitz, more and more Americans seemingly do not want to be tethered to a desktop computer or even a laptop. They want a light mobile device they with which they can curl up on the sofa with to watch an online movie, stow in a backpack for subway reading, or pass around the office with the latest vacation pictures. Belllaria and Leibovitz say that the broadband connections that enable this flexibility are wireless and points out the need for more spectrum for mobile broadband that the FCC has identified in the National Broadband Plan.

They point out that many of the iPads currently rely solely on WiFi to connect to the Internet. They said that the FCC should know before long what the impact of the iPad will have on spectrum use. (Published Reports)

**

RADIO LAW: RAC FILES FOR 60 METER CANADIAN ALLOCATION

Radio Amateurs of Canada has filed a request with telecommunications regulator Industry Canada for some 60 meter spot frequency assignments. The formal request was sent to the Director, Spectrum and Radio Policy, for consideration in authorizing for the Canadian Amateur Service the same five 5 MHz frequencies that are now authorized in the United States. In addition, two spot frequencies are also requested for exclusive Canadian amateur use.

The ground work for this was established at previous meetings of the Canadian Amateur Radio Advisory Board Radio Amateurs of Canada anticipates this request will go through a lengthy due process of analysis and review at Industry Canada before being published as a Canada Gazette Notice for public comment. If all goes well, Canadian hams could see an authorization to this spectrum within a year. (VE3LC)

**

ON-LINE EDUCATION: TYCO OFFERS FREE ELECTRONICS COURSES

Tyco Electronics has launched a free web-based training program aimed at designers of electronic and electrical equipment. From electrical basics to detailed descriptions of circuit protection strategies, Circuit Protection University provides a suite of practical, self-paced tutorials.

The site launch has been nick-named CPU and includes an overview of circuit protection devices and tutorials on overcurrent and overvoltage protection techniques. Additional courses in coordinated circuit protection and I/O port protection are now also available. Most important the training program also includes real world examples of circuit protection solutions for consumer electronic devices. More can be found at http://go.bluevolt.com/CoBrandTemplate/home.aspx?brand�co (PSD)

**

ON THE NET: ARRL LAUNCHES NEW WEBSITE

The newly redesigned ARRL website is up and running and those visiting it have given it a big thumbs up. Still located in cyberspace at www.arrl.org, the new look makes navigating the site a breeze while at the same time striking what appears to be an almost perfect balance between content and advertising.

Among the most welcome changes are the click-to buttons at the very top of the page. A single mouse click navigates the user to such topics as Licensing, Technology, a Membership area and much more. In all there are eleven instant access buttons including one to bring you back to the suites home page.

A welcome carry over from the old ARRL web design was the decision to keep the latest news right on the home page as headlines. To read more you just click on the story and the full text appears almost instantly.

The new website was more than two years in the masking. Rather than our trying to describe it, you really need to visit it yourself. Just take your web browser to www.arrl.org and then click around. (ARRL)

**

ON THE NET: APRIL EME NEWSLETTER NOW AVAILABLE FOR DOWNLOAD

The latest issue of the 144 MHz EME Newsletter is now available for download. Articles in this edition include coverage of operations from the Maldives, upcoming and current DXpeditions including Earth-Moon-Earth communications and the April Moon Graph. It and past issues are available on line at www dot df2zc dot de slash newsletter. (VHF Reflector)

**

HAM RADIO ON THE NET: UPDATED ARECUIBO INFO NOW ON LINE

And Russ Pillsbury, K2TXB reports over the VHF Reflector that he has now finished upgrading the Arecibo E-M-E coverage web pages. Russ says that the added information will hopefully answer most questions abut the upcoming operation using the 1000 foot dish on April 16, 17, and 18. The information is on line at www dot k2txb dot com. (K2TXB)

**

HAM HAPPENINGS: INTERNATIONAL MUSEUMS WEEKENDS IN JUNE

The 2010 International Museums Weekend special event will again be split between two weekends. The first half of the event is slated for the 19th and 20th June while part two takes place on June 26th and 27th. M1BYT, who is organizing this world-wide event is asking that all those intending to take part should register their museum via e-mail to harry.m1byt (at) tiscali (dot co (dot) uk. Full details of the event can be found on the International Museums Weekend can be found on-line at www.ukradioamateur.co.uk/imw.
(GB2RS)

**

THE SOCIAL SCENE: OH-KY-IN ARS CELEBRATES ITS 50th YEAR

And a happy 50th anniversary to one of Newsline's long time support groups. The OH-KY-IN Amateur Radio Society celebrates its 50th year of existence in 2010. We know that you join with us in congratulating them on reaching this very important milestone. The name OH-KY-IN is an acronym derived from the sates of Ohio, Kentucky and Indiana which are the served by this group. (ARNewsline(tm))

**

THE SOCIAL SCENE: EMCOMMWEST PRE REGISTRATION CLOSES APRIL 23

And there's only a few days left to pre-register for the west's annual ham radio emergency communications event. Don Carlson, KQ6FM, is in Reno Nevada with the details:

--

Advance registration for EmcommWest in Reno is now in the final days, closing on April 23. The ARRL Emergency Communications specialty convention will be held at the Grand Sierra Resort Hotel in Reno Friday April 30 through Sunday May 2.

Some of the topics this year will include Simplex exercises, VOIP, Digital networks, effective communications between CERT and ARES, incident responses, public relations and setting up training classes. There will also be a full day devoted to classroom teaching of the latest ICS courses in addition to the Saturday night banquet, featuring ARRL CEO Dave Sumner, K1ZZ.

All of the information and registration is available online at www.emcommwest.org.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

Again, that website is www.emcommwest.org. (EmcommWest)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: FIRST SOLAR ONLY POWERED D-STAR SYSTEM ON THE AIR

What's believed to be the worlds first and only D-Star solar powered repeater has come on the air from Belgium. According to the Royal Union of Belgian Radio Amateurs the ON0CPS system was recently put into operation by ON4BK and is designed to operate entirely on solar energy.

The new D-Star repeater operates with an input channel of 431.9625 MHz with its output on 439.5625 MHz. According to the society, during the day there is usually enough sunlight to keep the machine in operation while simultaneously charging its two 120 Amp Hour batteries which power it at night. So far the repeater has been running over a month on this solar power alone with no failures or complaints.

More is at the ON4BK website located at http://tinyurl.com/yyajoxx (UBA)

**

WORLDBEAT: VK AND ZL ANZAC DAY

Hams in Australian and New Zealand will be operating on ANZAC Day on Sunday April 25. This is an amateur radio salute to the servicemen and women in the many conflicts worldwide. Several museum ships, including the H-M-A-S Whyalla will be taking part in this event. More about ANZAC Day can be found at
http://www.wia.org.au/newsevents/news/2010/20100406-1/documents/WARC_%20ANZAC%20DAY_7.pdf
or http://tinyurl.com/y4z28kq (WIA News)

**

WORLDBEAT: AUSTRALIA ANNOUNCES DTV REPEATER WITH STEREO AUDIO

Australia now has a Digital Amateur Television repeater that has full stereo audio. The VK3RTV repeater on Mt Dandenong which services the Melbourne and Geelong areas now has dual channel sound on both its digital and analog inputs. About seven stations transmitting digital DVB-S uplink have the capability to transmit stereo sound through the machine. Peter Cossins VK3BFG advises that experiments are also being conducted with Internet streaming with the British Amateur TV Club in the UK. (VK3BFG)

**

WORLDBEAT: SECOND AFRICAN WSPR BEACON TAKES TOM THE AIR

The second beacon using the new WSPR mode has gone on the air in Africa. Using the callsign 5X7JD the system is located in Masaka, Uganda and outputs 1 watt while cycling through 80, 40, 30, 20, 17, 15, 12 and 10 meters. This gives an overall cycle between WSPR transmissions returning every 16 minutes to a given band.

The beacon is composed of an embedded system based on a PIC microprocessor, a Direct Digital Synthesis chip and a MOSFET Power Amplifier with selectable filters all feeding a HyGain Av 18VS multi-band vertical antenna. Time and location information are derived from an attached GPS receiver. You can read more about the station at www.hamradiosafari.com. (GB2RS)

**

HAM RADIO IN SPACE: AO-51 GOES SEMI-CTCSS

In ham radio space related news, Amsat Oscar 51's transmitter on 435.150 has been turned off and the 435.300 transmitter power output has been raised to near 2 watts output. Also, on Saturday, April, 10th the new continuous tone access routine was turned on. This cycle will turn the downlink on with an unsquelched uplink when it hears a 67 hz tone. The plan is to leave a squelch tail of several minutes, so the transmitter will stay on without hearing a tone for an interval of several minutes.

What does this mean for the average satellite user? First, if would be advisable to program in a 67 hz CTCSS tone if your radio supports tone access, but not absolutely required as long as someone else in the footprint does. It also means if you are the first person in the footprint you might not hear the satellite until after it hears 67hz for a few seconds. Reports from when the downlink turns on or off would be appreciated and go to ko4ma@amsat.org. (KO4MA)

**

HAM RADIO IN SPACE: ESTONIA TO LAUNCH HAM RADIO CUBE-SAT

The University of Tartu, in Estonia, has submitted a frequency coordination application to the IARU for an Amateur Radio CubeSat. Called ESTCube-1, the tiny bird would be a Low Earth Orbit satellite with UHF downlinks and a VHF telecommand uplink. It would also carry a camera to acquire images of Estonia for and will deploy a 10 meter conductive tether as a part of the development work of an electric solar wind sail. The projected launch for ESTCube-1 would be in 2012 although no launch opportunity has yet been confirmed. More on this Estonian ham radio in space project is on-line at http://tinyurl.com/yk66s2o. (ANS)

**

ON THE AIR: WIA CENTERIARY QRP CONTEST

Turning to the world of radiosports, the VK QRP Club will sponsoring a low power contest during May, This, to commemorate the Centenary of organized amateur radio in Australia.

All three grades of Australian license holders can join this one, provided they limit their output power to five watts CW and 10 Watts for AM and SSB. The contest will be on the 80 and 40 meter bands.

More details and the contest rules can be found on the Wireless Institute of Australia's website. Its in cyberspace at www.wia.org.au. (WIA)

**

ON THE AIR: CELEBRATING MORSE ARGENTINA

And members of the Grupo Argentina de CW will be active from Morse in Buenos Aires Province to commemorate the town's foundation birthday. The operation will take place from 1500 UTC on May 7th to 2000 UTC on May 9th. More details are on line at gacw.no-ip.org (LU1DZ)

**

DX

In DX, word that F5UOW, will stay on Reunion island through May 2nd. He will be active only on 20 meters signing portable FR until April 17th. He will then change his location and will show up as TO2R mostly in CW on 80 through 10 meters. QSL cards should be sent direct or via bureau to his home callsign.

ND9M is active as VQ9JC from Diego Garcia for the next four months. He reportedly prefers CW but also works in SSB and some of the digital modes. He also hopes to get the special call VQ90JC by the end of May in time for the CW portion of the WPX Contest. QSLs go to ND9M either direct or via the bureau.

SP2JMB is reportedly on Maritius signing 3B8SC. His operation is Morse only and he's expected to be operational through April 21st. QSLs via SP2JMB.

UA9YAB says that he plans to arrive in Mongolia on May 25th and will be operating all band mobile until June 2nd as JT9YAB using simple antennas and an emphasis on 50 MHz. If all works out as planned he will be find a location for a second trip for this fall focused 160 and 80 meter operation. QSL via UA9YAB direct only.

Lastly, here's one of those of you who hunt DX only on the bands above 50 MHz. I-2-S-V-A says that he will be active in late April and early May portable I-S-0 from Sardinia's grid square J N 40 U U using 2 meter weak signal modes. Hi operation will focus Meteor Scatter on April 24th and 25th. SSB and CW will take place on May 1st and 2nd. QSL I2SVA at his call book address.

(Above from various DX news sources)

**

THAT FINAL ITEM: PRODUCER DAVE BELL W6AQ LOOKING FOR FILM COPY OF "THE HAMS WIDE WORLD"

If you are old enough to remember back to when movies in school classrooms and on television were shown on film, then you also may remember that most non theatrical movies were shot and distributed on 16 millimeter film. Almost all of the early movies about ham radio were photographed on 16 millimeter including the 1969 Dave Bell, W6AQ, classic titled "The Hams Wide World."

Well Dave would like to restore that move and several others but so far no really decent prints of "The Hams Wide World" have been found. The only projectable one located so far is very faded. A video transfer done some 25 years ago used a film print that was severely scratched. A few months ago the ARRL was contacted to see if they might have a viewable print but none could be found.

Well, when "The Hams Wide World" went into distribution back about 40 years ago, it was a loan out program from what was then the ARRL Film Library. Its estimated that there were two to three dozen copies of "The Hams Wide World" in circulation, and in the off chance that one or two never got returned to League headquarters, we are turning to all of you. Especially any old timers who were responsible for getting programs for radio club meetings back in the early to mid 1970's. .

Perhaps you borrowed a copy of "The Hams Wide World" and forgot to send it back. Maybe its still sitting in your attic, closet or basement. If you do happen to have such a film print, Dave would love to borrow it for the restoration process.

You can contact Dave Bell, W6AQ, by e-mail to dbamovies@aol.com. He says that he would sincerely appreciate your help. (ARNewsline(tm))

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

I suppose the next thing to do is look for a good simulator that runs on
Linux.

The power requirements of sounders depend on the ohm ratings of the
coils, which is usually stamped somewhere on the sounder. The lower the
ohms, the lower the voltage requirements. Some modern things need to be
done like adding more resistance so it won't be too sluggish. Also a
pair of zeners back-to-back is recommended to prevent something (I

forget what).

Another thing I'll need to use a few lines for would be some means of varying the output speed. Yes, an alternate output could ride along for free. Perhaps also a relay to go to the key input of a radio.

Another thing is that telegraph "lines" might indeed be a single wire..
Using the Ground as the "Return" for the loop

This was often done both for telegraph and for mains electrical at one
time due to a shortage of metal for the wires... This is very likely why
house systems have a ground bonded to the neutral at the service
entrance AND AT THE POLE.. At one time they simply forgot to use a neutral.

Plus I"ve seen several "Loop" systems today where a single wire is
looped from the "Central office" out to each "node" or station and all
the way back.. One such was made by Phillips back in 1980.. I used to be
one of the operators (This was a telephone system) the finished product,
I used to joke, had one part that NEVER FAILED... That was a reset
button... The original failed and the replacement came from Radio Shack.

Correct. While Washington DC is a district, for all intents and purposes, it is a city, just like Philadelphia or New York.

And in line with what Jim had said, I'm actually surprised that there are some many hams per non-hams.

I can under stand that there are relatively many hams in places like Alaska. They live a lot closer to the edge of disaster than most of us, and there's only so much infrastructure you can put in in some of the more remote areas.

Wake Island might think about recruiting another Ham or two! 8^)

That is what I get for being a Science Major.. I consider "Doing" (LAB) to be part of the "Studying" (Lecture hall) process. (IN short agreed)

>> The technicial ability is a result of the willingness to study
>
> Partly - but it also is a result of doing. "Book learning" is great
> but it must be matched by practical know-how to do a radio amateur any
> good.

There is a story... And you are looking at the end result of it as you read this.

The story is a Professor had a bright idea.. How to make analog devices (Vacuum tubes) work in a DIGITAL fashion (Could this be the first computer circuit... Yes, it was.. I told you you were looking at the end result)

Well, he put his A+ Lab assistants on the job and they quickly hit a wall

Then his A, A-, B+, B, B-

Well to make a long story short he got down to a "C" student.. Now this student knew the book forward, backward, and sideways, but he also knew what worked (A fiction note follows) and thus he tended to answer test questions with what worked, rather than what the book wanted.

You see. He was a Ham Radio Operator and he had tested the theory.

He also had a working digital gate within six months.

The fiction note

In the world of Star Trek there is a book, If I don't mangle the title too much It is Kobashi Maru (The "No win" test at the academy) And I believe it's written by the lovely and talented Julia Ecklar (Yes, I know her)

If you can snag a copy read Scotty's chapter where he talks about his time in command school.. Normally engineers do not go to command school but... Scotty .... Is different.

Depending on how and what the statistics are used for. If you are the F.C.C., you have to count the grace period licenses. You might want to separate them out, but the policy is that they don't reassign them for two years. There's good reasons for that, how many of us have forgotten to get our cars inspected once in a while. Any rate, they aren't in the business of punishing a mistake with having to go through the licensing process again.

When we keep a count, the important thing is that we are consistent. Then we see trends, and to me, the trend is the important thing.

The trend is after the expected drop-off in the early years of this century, (note 1) there was an increase in the number of Hams in recent years. There was a shift in which a lot of Hams upgraded to Extra. We also got a lot of new Hams via interest in emergency Ops. These were largely, but not all, Technicians.

That's pretty much the trends I see.

note 1. The expected drop-off was most likely the result of a large group of inactive Technicians declining to renew their licenses. This was a group who were licensed in the early 1990's who used Ham radio as a sort of communications line home to figure out if they needed to stop off at the grocery store to get bread or pick up the kids after soccer practice.

After the ascendency of Cell phones, these people by and large migrated over to cells, because it served their purpose better. At that point, they became inactive. When I first became a Ham in the late 1990's, there were a few local Hams left who still did this. But over the next couple years, they all disappeared. And at least in my area, the Hams who didn't renew their Technician license were the ones who used Ham radio for that purpose.

Jeff,

I started with the <$20 MFJ brass straight key. Good adjustment span. Set the contact space with a business card. Make sure you remove the telegraph short bar or set it right. Office friends pitched in and got me a Bencher RJ2 for retirement. It's all I use now. Retail $155...discounted <$130.

Probably the reason you never got the answers is there probably are only opinions. Straight vs. bug. vs paddles? Reality does have top speed capable is with the iambic paddles, but is top speed best means of communication? I've known straight key users to send consistently >35 wpm. They use those speeds with others of like ability. Remember, you have to copy at/near the speed you send, so being able to blaze away with an iambic paddle at 60-70 wpm means you expect to copy from the lone ham out there at the same rate.

90% of my CW contacts are <20 wpm; most around 15. That seems to be about average copy ability for information QSOs.

Our CW group of 6 has 5 paddlers and 1 straight. My now-SK CW Elmer could move between paddle and straight for SKNs (straight key nights). He expressed that it is easier to learn on paddle and move later to straight keys -- but that was his opinion. Most contests pass rudimentary information and you develop a pattern of copying and sending based on the contest info. Often you are copying a recorded 'macro'.

Carl

It is my understanding that many of them were. Besides the savings in wire and insulators, a ground-return system could actually be lower resistance than a double-wire system if the "made grounds" at the ends of the lines were very good.

Of course such a line is more vulnerable to noise, but since the wire telegraph was a digital system the nouse would have to be considerable to have any effect.

Ham radio is a lot closer to engineering than science, however.

Who was the Professor and where was he?

(here follows a digression)

The reason I ask is that I've seen and put my paws on parts of ENIAC -
the world's first fully operational high speed, general purpose,
Turing-complete, electronic digital computer. All modern computers are
descended from ENIAC.

Yes, there were other machines that try to claim the title. But they
all lack one or more of the characteristics of ENIAC.

For example, some early machines were part mechanical and part
electronic. Some were never fully operational, or only became fully
operational long after ENIAC. Many were special-purpose machines,
built to do one thing rather than being general-purpose programmable
systems that were Turing-complete. Many were not high-speed, using
line frequency for the clock.

About the only serious competition ENIAC has is the British Colossus
machine. But because of extreme secrecy, Colossus did not have any
direct descendants, while ENIAC did, leading to the first UNIVAC. I'm
not sure if Colossus was Turing-complete, either.

> You see. He was a Ham Radio Operator and he had tested the theory.

Another story:

Some years back there was a documentary about the development of the
proximity fuze during WW2. The challenge was to build a small radar
set - with tubes, antenna, battery, etc. - into an artillery shell.

The problems involved were immense, considering that the fuze would have to survive the shock of being fired, the spinning of the flight, and still work when it got to the target. It would also have to not detonate falsely, and work without maintenance after months or years of storage and transport.

One of the managers of the project said that what worked best in the development was to pair a theoretical scientist, usually a physicist, with a ham. The physicist would do the theoretical; the ham would do the practical. The proximity fuze was developed and manufactured in the millions during the war.

I will look for the book. Kobiashi Maru IIRC.

I don't think that all the High muckey-mucks have to be all Pilots or
Train drivers, but in the FCC's case there should be one or two that
have day to day operational expererience in electronics.
Even the commisioners' staffs do not have practical experience
according to their biographies on the FCC website.

It's even more urbanized than Philadelphia, IMHO. (I've spend considerable time in both cities).

> And in line with what Jim had said, I'm actually surprised that there
> are some many hams per non-hams.

I think you meant "so many hams...". I suspect that many of them are temporary transplants (students, for example).

> I can under stand that there are relatively many hams in places like
> Alaska. They live a lot closer to the edge of disaster than most of

I don't think Alaskans are "much closer" to the edge of disaster than most of us. However, I bet they do have fewer restrictions on antennas.

And for longer than I've been a ham, there's been the special Alaskan emergency frequency. Might be more than a few folks who got ham licenses just to use it.

There are probably a lot of factors that influence the number of hams per-capita, and what they do. For example, Florida has lots of hams - and lots of retirees.

You got it.. If, every time, they only count ACTIVE (or valid) licenses,
and do not count "Grace Period" licenses... Then it matters not that
they don't count them.

But if they count them one time and not the next (Or the other way
around) that would throw things off big time.

What bothers me is the small numbers.. I'd like to see bigger numbers

I have no idea,, In fact it's been long enough I can't even tell you
where I read the story (May have been QST, may have been another Radio mag)

I do know it's been a long time since I read the story.

Speaking of QST, and Thread drift,, Did you see the article in the April
QST on Digital Antennas.

At least they were UP Front about it.

(If anyone wonders about that article... IT's the April edition)

I'm not surprised to find that there are many hams in DC

Many of the folks who list DC addresses are folks who have worked hard
to get there, They are wise and they are interested in public service.

Does this not describe ham radio operators? (Well many of us)

The qualities overlap nicely

> might claim they had a conflict of interest).

Actually it is amazing the number of agencies that ARE run by hams.. Or perhaps not so amazing when you consider a few things about Hams.

But the fact is many CEO's in many companies are hams.. Because the kind of dedication it takes to study, not all that long ago code, plus the law, and technical questions, these days even rocket science. The kind of dedication it takes to pass that EXTRA CLASS license test.

Is the very kind of dedication that they look for when they hire a new CEO or appoint a new department head.

And hams have that kind of dedication.> Otherwise they'd be CBers or SWL's or... Mundanes (A term we use in another of my hobbies)

Now.. I can tell you one origination you may wish to look at, IN fact I'll describe two The American Diabetes Assn, and the Juvenile Diabetes Research Foundation.

ADA is run mostly by Doctors, Nurses and other medical professionals.. They spend the majority of their funds on diabetes education teaching diabetics (Such as myself) how to better manage our condition. This is good work.

But when Diabetes is ever cured.. They will be out of work

JDRF is run by either Type 1 Diabetics or by parents of Type 1 Diabetics.. Now, when diabetes is ever cured they too are going to be out of work.

But where the ADA folks will be "Woe is me, I'm out of work" the JDRF folks won't have time for Woe cause they are going to be planing and putting on the party to end all parties.. Cause the Dragon Mellitus (DM, get it) has been well and truly slain!

The moral.. Some outfits are indeed run by the right people,, People who have a very strong interest in seeing the company meet it's goals.

I heard the story on New Hampshire Public Radio, I thought it was good.
It looks like the reporter actually did her research and got the facts
correct.

Agreed.

I jes turned 62 and am studying like crazy for my element 2 and 3 license. Got a Kent key and practicing that, too. DZkit told me I was lucky to get a piece of the new shipment of Kent keys cuz there's been an unexpected run on them. Since the discontinuation of cw requirement, they say interest is WAY up. Go figure.

That thing about noise reminded me of a story about a severe magnetic storm that happened in the 1880s or thereabouts. Currents induced into telegraph lines were so strong that things caught fire in telegraph offices as well as simply knocking them offline.

This is SPAM.
I don't know how newsline got the idea these courses are free.

I went to the URL go.bluevolt.com/CoBrandTemplate/home.aspx?brand�co
that was cited.

These courses are NOT free.
They seem to individually cost about what a Community College would
charge for continuing education courses.

Another advantage of Ham Radio.... I have spoken to folks in places
where FaceBook, Twitter and Cell phones...... Well, they never heard of
them at least not in their town. And that is under "Routine" conditions.

Now when things go south.... Well.... As my T-Shirt says "When all else
fails... HAM RADIO"

I suspect you folks know where to buy the shirt (ARRL Store)

Friend of mine hooked a very high impedance volt meter to his long wire
antenna one storm and got some very interesting voltmeter readings

Several volts (As in 3 digits) as I recall.. Of course it did not take
much current to ground it out but it was amazing the amount of voltage
on that wire.

My Long wire is DC-Grounded so I don't see that.

I don't know who is working on such a project but if I'm not mistaken
the "Channel 1" on a standard out of the box 802.11 router is in a ham
band (Right at the edge, channel 2 is not)

Channel one is...... 2412 per the software I have here (The McDonalds
I'm sitting in... Chan-1 of course, Makes it easy to read the frequency)

> I passed!

Well.. Congrats on Passing... I kind of recall how you feel..

You see,, I got my first license (novice) back about 1968, Then my second (Fall same year Tech class, and remained stuck there for what, 38 years... Finally I broke tradition and visited Dayton, walked into the testing session and did the paper upgrade to General, bought a TS-2000 and quickly found that unlike the hand held I used as a Tech.. It was able to transmit on frequencies not allowed a General class licensee.

So.. I took a class, well 2/3 of it as I was leaving town, and the Saturday before thanksgiving.. I fixed that TS-2000 so it would not transmit out of band.. I fixed it using a #2 lead pencil and a dollar store calculator.... (I got 2 wrong on the Extra Class Test)

Congrats on joining the ranks of the licensed.. May good fortune follow you all of your days.

Congratulations!

I still remember how nice it felt to say "Temporary AE" for the first time.

Thank you LEN... I have long forgotten when the internet became public, 1991, good to know.. I first logged on to Compuserve as 73455,43 in 1983 using a VIC-20 and a VIC 1011A modem. 300 baud (well you could push it to 450 for the same price) and folks we paid by the minute for connect time back then so I used a modified "Fast-Doc" to download messages fast as the modem could stream them to memory, then print 'em out and compose replies off line as a script file and upload 'em later. Not easy on a VIC-20, even with full memory expansion (Which I had)

I'm still on what's left of Compuserve under my call (WA8YXM) though the Ham Radio forum is long gone... There are still some good groups left there.. However it's now an AOL-Web Property and farmed out to some folks who have no concept of how a forum should be hosted so many of the features that made classic Compuserve the single greatest service in the world... History. But many of the good people who also helped to make it great... Still there.

But it's nice to know the internet became "live" in 1991 (Public)

Well,, I kind of never did that.. Cause when I did the upgrade to General, I also got the TS-2000 same day, but rather than end up with one arm considerably longer than the other from lugging it all over Dayton Convention center.. I had 'em ship it (I'm serious, that WAS the reason) and by the time I got back home.. Well.. The license was waiting and the radio arrived a couple of days later.. No no "Temp" there.

And when I did the upgrade to Extra.. ... Well,, I don't often stray out of the General bands anyway.. So again, I never needed to sign "Temp" as... Well.. I just don't use those frequencies much

Usually it's like 2973 or 3995 or x.070 (Many different X's)

Changes followed by "|".

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group every month. You are now reading the first article, which explains what rec.radio.info is, and answers some Frequently Asked Questions. The second article is titled Posting Guidelines, and you only need to read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:

- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit chat about radio. Rec.radio.info will contain informational, factual articles only. Follow-ups are redirected to an appropriate other group, and further discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

```
/Newsgroups:.*[ ,]rec\.radio\.info/h:j
```

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

```
rec.radio.info:!s/:^
```

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

```
sequence
rec.radio.info
rec.radio.
```

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

In slrn, according to the srln FAQ, the following scoring rule will |
allow you to see rec.radio.info-crossposted bulletins, while still |
filtering out most SPAM or "Velveeta" crossposted to more than 2 |
newsgroups (as such articles usually do not contain a 'Followup-To:' |
header): |

```
Score: -9999                                                       |
        Newsgroups: ,.*,                                           |
        ~Followup-To: .                                            |
```

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

   rec.radio.swap may be more deserving of the posting in any matter.

   Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

 -- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

 -- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

 -- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc	Amateur (ham) radio and related matters
rec.radio.amateur.packet	Amateur Packet Radio discussions
rec.radio.amateur.policy	Amateur Radio practices, rules, etc.
rec.radio.noncomm	Non commercial radio discussions
rec.radio.shortwave	International broadcasting on the 'HF' bands
rec.radio.cb	Citizens Band (27 MHz) discussion
rec.radio.scanner	Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated	Amateur radio practices, rules, etc.
rec.radio.broadcasting	Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of

Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

```
 Message-ID: <$opa.55.1994@ampr.org>                                    |
```

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Before the Federal Communications Commission Washington, D.C. 20554

In the Matter of

Amendment of Part 97 of the Commission's Rules Regarding Amateur Radio Service Communications During Government Disaster Drills))))))

WP Docket No. 10-72

NOTICE OF PROPOSED RULEMAKING

Adopted: March 18, 2010 Released: March 24, 2010

Comment Date: (30 days after publication in the Federal Register).
Reply Comment Date: (45 days after publication in the Federal Register).

By the Commission:

I. INTRODUCTION

1. In this Notice of Proposed Rulemaking, we propose to amend the Commission's amateur radio service rules with respect to amateur radio operations during government-sponsored emergency preparedness and disaster readiness drills and tests. Although public safety land mobile radio systems are the primary means of radio-based communications for emergency responders, experience has shown that amateur radio has played an important role in preparation for, during, and in the aftermath of, natural and man-made emergencies and disasters. Current rules provide for amateur radio use during emergencies. At the same time, the rules prohibit communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. While there are some exceptions to this prohibition, there is none that would permit amateur station control operators who are employees of public safety agencies and other entities, such as hospitals, to participate in drills and tests in preparation for such emergency situations and transmit messages on behalf of their employers during such drills and tests. Accordingly, we propose to amend the rules to provide that, under certain limited conditions, amateur radio operators may transmit messages during emergency and disaster preparedness drills, regardless of whether the operators are employees of entities participating in the drill.

II. BACKGROUND

2. One of the fundamental principles underlying the amateur radio service is the "[r]ecognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications." Further, the rules state that "[n]o provision of these rules prevents the use by an amateur station of any means of radio communication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available." Indeed, amateur radio operators provide essential communications links and facilitate relief actions in disaster situations. While land mobile radio services are the primary means of conducting emergency communications, amateur radio plays a unique and critical role when these primary facilities are damaged, overloaded, or destroyed. For example, during Hurricane Katrina, amateur radio operators volunteered to support many agencies, such as the Federal Emergency Management Agency, the National Weather Service, and the American Red Cross. Amateur radio stations provided urgently needed wireless communications in many locations where there was no other means of communicating and also provided other technical aid to the communities affected by Hurricane Katrina.

3. Since amateur radio is often an essential element of emergency preparedness and response, many state and local governments and public safety agencies incorporate amateur radio operators and the communication capabilities of the amateur service into their emergency planning. In this regard, some entities, such as hospitals, emergency operations centers, and police, fire, and emergency medical service stations, have emphasized the participation of their employees who are amateur station operators in emergency and disaster drills and tests. For example, a representative of the New Orleans Urban Area Security Initiative recently emphasized the importance of conducting emergency drills and the need for amateur participation.

4. The Commission's rules expressly permit operation of amateur stations for public service communications during emergencies, and on a voluntary basis during drills and exercises in preparation for such emergencies. Given, however, that the Amateur Radio Service is primarily designated for "amateurs, that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest," the rules expressly prohibit amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." Accordingly, public safety entities seeking to have employees operate amateur stations during government-sponsored emergency preparedness and disaster drills presently must request a waiver.

III. DISCUSSION

5. We seek comment on whether to amend the rules to permit amateur radio operators to participate in government-sponsored emergency and disaster preparedness drills and tests, regardless of whether the operators are employees of the entities participating in the drill or test. The rules already recognize the importance of amateur radio in emergencies, and permit participation in such drills and tests by volunteers (i.e., non-employees of participating entities). As noted above, experience has shown that amateur operations can and have played an essential role in protecting the safety of life and property during emergency situations and disasters. And as evidenced by recent waiver requests, state and local government public safety agencies and other entities often conduct disaster and emergency preparedness drills to be best-prepared for such eventualities. The proposed rule would obviate the need for a waiver in such instances by allowing employees of public safety agencies and other entities to operate amateur stations for testing and drilling of emergency communications preparedness. We thus tentatively conclude that employee status should not preclude or prevent participation in government-sponsored emergency and disaster tests and drills. Further, we tentatively conclude that extending authority to operate amateur stations during such drills will enhance emergency preparedness and thus serve the public interest.

6. In reaching these tentative conclusions, we do not disturb the core principle of the amateur radio service as a voluntary, non-commercial communication service carried out by duly authorized persons interested in radio technique with a personal aim and without pecuniary interest. Rather, we believe that the public interest will be served by a narrow exception to the prohibition on transmitting amateur communications in which the station control operator has a pecuniary interest or employment relationship, and that such an exception is consistent with the intent of the amateur radio service rules. Accordingly, we propose that amateur operations in connection with emergency drills be limited to the duration and scope of the drill, test or exercise being conducted, and operational testing immediately prior to the drill, test or exercise. 7. Furthermore, we propose that the emergency tests and drills must be sponsored by Federal, state, or local governments or agencies, in order to limit the narrow exception to ensure that drills further public safety. We note, however, that there may be circumstances where conducting emergency drills for disaster planning purposes, even if not government-sponsored, would serve the public interest. Accordingly, we seek comment on whether we should permit employee operation of amateur stations during non-government-sponsored emergency drills, if the purpose of the drill is to assess communications capabilities, including amateur radio, in order to improve emergency preparedness and response.

8. A large number of agencies and organizations at the state and local levels coordinate with their local volunteer amateur radio operators to conduct drills and exercises in concert with other modes of communication. This joint activity is essential to allow for a practiced response on the part of the first responder community.

Because some of those drills and exercises include transmission of amateur communications by employees of participating entities, we believe the proposed rule changes would be in the public interest, consistent with ongoing national emergency preparedness and response priorities. We therefore seek comment on the tentative conclusions contained herein.

III. PROCEDURAL MATTERS

9. Initial Regulatory Flexibility Certification. The Regulatory Flexibility Act (RFA) requires an initial regulatory flexibility analysis to be prepared for notice and comment rulemaking proceedings, unless the agency certifies that "the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities." The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction." In addition, the term "small business" has the same meaning as the term "small business concern" under the Small Business Act. A "small business concern" is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).

10. Because "small entities," as defined in the RFA, are not persons eligible for licensing in the amateur service, this proposed rule does not apply to "small entities." Rather, it applies exclusively to individuals who are the control operators of amateur radio stations. Therefore, we certify that the proposals in this Notice of Proposed Rulemaking, if adopted, will not have a significant economic impact on a substantial number of small entities. The Commission will send a copy of the Notice of Proposed Rulemaking, including a copy of this Initial Regulatory Flexibility Certification, to the Chief Counsel for Advocacy of the SBA. This initial certification will also be published in the Federal Register.

11. The rulemaking shall be treated as a "permit-but-disclose" proceeding in accordance with the Commission's ex parte rules. Persons making oral ex parte presentations are reminded that memoranda summarizing the presentations must contain summaries of the substance of the presentations and not merely a listing of the subjects discussed. More than a one or two sentence description of the views and arguments presented generally is required. Other requirements pertaining to oral and written presentations are set forth in Section 1.1206(b) of the Commission's rules.

12. Comment and Reply Comment Filing Instructions. Pursuant to sections 1.415 and 1.419 of the Commission's Rules, 47 C.F.R. �� 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the front page of this document. Comments may be filed using: (1) the Commission's Electronic Comment Filing System (ECFS), (2) the Federal Government's eRulemaking

Portal, or (3) by filing paper copies. See Electronic Filing of Documents in Rulemaking Proceedings, 63 Fed. Reg. 24121 (1998).

� Electronic Filers: Comments may be filed electronically using the Internet by accessing the ECFS: http://www.fcc.gov/cgb/ecfs/ or the Federal eRulemaking Portal: http://www.regulations.gov. Filers should follow the instructions provided on the website for submitting comments. � For ECFS filers, if multiple docket or rulemaking numbers appear in the caption of this proceeding, filers must transmit one electronic copy of the comments for each docket or rulemaking number referenced in the caption. In completing the transmittal screen, filers should include their full name, U.S. Postal Service mailing address, and the applicable docket or rulemaking number. Parties may also submit an electronic comment by Internet e-mail. To get filing instructions, filers should send an e-mail to ecfs@fcc.gov, and include the following words in the body of the message "get form." A sample form and directions will be sent in response.

� Paper Filers: Parties who choose to file by paper must file an original and four copies of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number. Filings can be sent by hand or messenger delivery, by commercial courier, or by first-class or overnight U.S. Postal Service mail (although we continue to experience delays in receiving U.S. Postal Service mail). All filings must be addressed to the Commission's Secretary, Federal Communications Commission. � The Commission's contractor will receive hand-delivered or messenger-delivered paper filings for the Commission's Secretary at 236 Massachusetts Avenue, NE, Suite 110, Washington DC 20002. The filing hours at this location are 8:00 am to 7:00 pm. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes must be disposed of before entering the building. � Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743. � U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street, SW, Washington DC 20554. People with Disabilities: To request materials in alternative formats for people with disabilities (Braille, large print, electronic files, audio format), send an e-mail to fcc504@fcc.gov or call the Consumer and Government Affairs Bureau at (202) 418-0530 (voice), (202) 418-0432 (tty).

13. Interested parties may view documents filed in this proceeding on the Commission's Electronic Comment Filing System (ECFS) using the following steps: (1) Access ECFS at http://www.fcc.gov/cgb/ecfs. (2) In the introductory screen, click on "Search for Filed Comments." (3) In the "Proceeding" box, enter the numerals in the docket number. (4) Click on the box marked "Retrieve Document List." A link to each document is provided in the document list. Filings and comments are also available for public inspection and copying during regular

business hours at the FCC Reference Information Center, 445 12th Street, SW, Room CY-A257, Washington, DC 20554. Filings and comments also may be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., Portals II, 445 12th Street, SW, Room CY-B402, Washington, DC 20554, telephone 1-800-378-3160, or via e-mail to fcc@bcpiweb.com. This Notice of Proposed Rulemaking also may be downloaded from the Commission's web site at http://www.fcc.gov/.

14. Congressional Review Act. The Commission will send a copy of this Notice of Proposed Rulemaking to Congress and the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. � 801(a)(1)(4).

15. Paperwork Reduction Act Analysis. This Notice of Proposed Rulemaking does not contain proposed information collection(s), subject to the Paperwork Reduction Act of 1995, Public Law 104-13. In addition, therefore, the Notice of Proposed Rulemaking does not contain any proposed new or modified "information collection burden for small business concerns with fewer than 25 employees," pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, see 44 U.S.C. � 3506(c)(4).

16. Federal Rules that May Duplicate, Overlap, or Conflict with the Proposed Rules. None.

17. For further information, contact Jeffrey Cohen, Senior Legal Counsel, Public Safety and Homeland Security Bureau, (202) 418-0799, or via e-mail at Jeff.Cohen@fcc.gov.

IV. ORDERING CLAUSES

18. Accordingly, IT IS ORDERED, pursuant to sections 4(i), 303(r), and 403 of the Communications Act of 1934, 47 U.S.C. �� 154(i), 303(r), and 403, that this Notice of Proposed Rulemaking is HEREBY ADOPTED.

19. IT IS FURTHER ORDERED that the Commission's Consumer and Governmental Affairs Bureau, Reference Center, SHALL SEND a copy of this Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analyses, to the Chief Counsel for Advocacy of the Small Business Administration.

Federal Communications Commission Marlene H. DortchSecretary

APPENDIX

Proposed Rules

Part 97 of Chapter 1 of Title 47 of the Code of Federal Regulations is amended as follows:

The authority citation for part 97 continues to read as follows:

AUTHORITY: 48 Stat. 1066, 1082, as amended; 47 U.S.C. 154, 303. Interpret or apply 48 Stat. 1064-1068, 1081-1105, as amended; 47 U.S.C. 151-155, 301-609, unless otherwise noted.

1. Section 97.113 is amended by revising paragraph (a)(3), adding new paragraphs (a)(3)(i) and (a)(3)(ii), redesignating paragraphs (c) and (d) as new paragraphs (a)(3)(iii) and (a)(3)(iv) respectively, and redesignating paragraphs (e) and (f) as (c) and (d) respectively, to read as follows:

� 97.113 Prohibited transmissions.

(a) ***

(3) Communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer, with the following exceptions:

(i) A control station operator may participate on behalf of an employer in a government-sponsored emergency preparedness or disaster readiness test or drill, limited to the duration and scope of such test or drill, and operational testing immediately prior to such test or drill.

(ii) An amateur operator may notify other amateur operators of the availability for sale or trade of apparatus normally used in an amateur station, provided that such activity is not conducted on a regular basis.

I have been expecting this. Apparently the FCC is being deluged with waiver requests.

But they are not going far enough. The NPRM (and the waiver system) only deals with hams who work for government entities. It also should apply to hams who work for other disaster relief organizations, like the Red Cross and the Salvation Army.

Dick AC7EL

==> ARRL EXECUTIVE COMMITTEE EXAMINES PROPOSED VANITY CALL SIGN CHANGES, LEGISLATIVE, REGULATORY ISSUES, MORE

The ARRL Executive Committee (EC) held its first 2010 meeting Saturday, March 13 in Denver. The EC worked through a lengthy agenda that for the first time had been shared in advance with ARRL members -- the result of an ARRL Board action at its January meeting intended to increase transparency in the governance of the organization.

The EC administers the League's affairs in between Board meetings. It consists of the President (Kay Craigie, N3KN), five Directors elected annually by the Board, and - without vote - the First Vice President (Rick Roderick, K5UR) and Executive Vice President (David Sumner, K1ZZ). For 2010 the Director members are Tom Frenaye, K1KI (New England), George R. Isely, W9GIG (Central), Brian Mileshosky, N5ZGT

(Rocky Mountain), Bob Vallio, W6RGG (Pacific) and Dr David Woolweaver, K5RAV (West Gulf). Also in attendance at the meeting were General Counsel Chris Imlay, W3KD; Vice President Bruce Frahm, K0BJ, and International Affairs Vice President Jay Bellows, K0QB. Read more here <http://www.arrl.org/news/stories/2010/03/25/11404/?nc=1>.

==> FCC NEWS: FCC ISSUES NOTICE OF PROPOSED RULE MAKING ON GOVERNMENT DISASTER DRILLS AND AMATEUR RADIO

On March 24, the FCC released a Notice of Proposed Rule Making (NPRM) proposing to amend the Commission's Amateur Radio Service rules "with respect to Amateur Radio operations during government-sponsored emergency preparedness and disaster readiness drills and tests." While current rules provide for Amateur Radio use during emergencies, the rules prohibit communications where the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. In October 2009, the FCC released a Public Notice clarifying the Commission's rules relating to the use of Amateur Radio by licensed amateurs participating in drills and exercises on behalf of their employers. To date, the FCC has granted several dozen waivers under this new policy.

The FCC notes that while there are some exceptions to this prohibition, "there is none that would permit amateur station control operators who are employees of public safety agencies and other entities, such as hospitals, to participate in drills and tests in preparation for such emergency situations and transmit messages on behalf of their employers during such drills and tests." Based on that, the Commission proposes to amend the rules to provide that, under certain limited conditions, Amateur Radio operators may transmit messages during emergency and disaster preparedness drills, regardless of whether the operators are employees of entities participating in the drill. Read more here <http://www.arrl.org/news/stories/2010/03/25/11405/?nc=1>.

==> GLITCH DELAYS LAUNCH OF NEW ARRL WEB SITE

The ARRL's launch of a new Web site has been delayed following problems that appeared as the huge computer programs were being transferred to their main Web server. Normally the Web site connects ham radio operators around the world, dynamically presenting the services that ARRL offers the ham radio community at www.arrl.org. "When we tried to switch over to the new Web site on Wednesday, we encountered unanticipated technical issues during the process of transferring to the new Web site," said ARRL Chief Operating Officer Harold Kramer, WJ1B. "It appears that with all of the new technology and vast simultaneous hits to the site, the code had problems keeping up. We are working to fix the issues and should be online very soon. We have temporarily switched back to the old Web site until these issues are resolved. Obviously, we are trying to complete this transfer as quickly as possible and we will keep you informed of our progress."

==> DAYTON HAMVENTION(R): ANNOUNCING THE 2010 DAYTON HAMVENTION AWARD WINNERS

Three Amateur Radio operators who have made significant contributions to the Amateur Radio Service will be honored guests when the 2010 Dayton Hamvention(R) opens in Hara Arena on May 14. In addition, Hamvention organizers will recognize a Club of the Year in keeping with the 2010 Hamvention theme: Amateur Radio Clubs Worldwide: The Lifeline. "Choosing the finalists was a difficult process due to the number of fine nominations," said Hamvention Awards Committee Chairman Frank Beafore, WS8B. Click here <http://www.arrl.org/news/stories/2010/03/25/11403/?nc=1> to read more about these three deserving individuals and a club that personifies what Amateur Radio is all about.

==> LEGISLATIVE AFFAIRS: ARRL REQUESTS SUPPORT FOR S 1755

Senate Bill 1755 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 introduced in October 2009 by Senators Joe Lieberman (ID-CT) and Susan Collins (R-ME) -- has unanimously passed the US Senate and has been sent to the US House of Representatives for consideration and now sits in the House Committee on Energy and Commerce. The ARRL is asking its membership to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee. S 1755 accomplishes the same things as HR 2160; HR 2160 was introduced in April 2009 by Rep Sheila Jackson Lee (D-TX-18). Since S 1755 has already been approved by the Senate, moving it forward in the House will simplify the process. Click here <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more information, including instructions on how to encourage the committee's leadership to support S 1755.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- to be held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan.

The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Be sure to get your comments in by Monday, April 5. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> SOLAR UPDATE

Tad "We are too much like oysters observing the Sun through the water, and thinking that thick water the thinnest of air

<http://www.classicreader.com/book/309/7/>" Cook, K7RA, reports: The average daily sunspot numbers were down nearly 5 points this week from last week -- 24.6. A new sunspot group 1057 appeared on March 23, and by March 24, it was 25 times its original size. It covered 10 one-millionths of the solar hemisphere on Tuesday; on Wednesday, it grew to 25 one millionths. This is the largest area seen since February 11. Just past the Northern Hemisphere's spring equinox, radio conditions are good and geomagnetic indices are still quiet. In fact, the mid-latitude A index for March 21-23 was 0 for all days. Look for more information on the ARRL Web site on Friday, March 26. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Herman Melville's Moby Dick <http://www.classicreader.com/book/309/7/> (Chapter 7, "The Chapel").

==> THIS WEEK ON THE RADIO

This week, the CQ WW WPX Contest (SSB) is March 27- 28. Next week, look for the Lighthouse Spring Lites QSO Party on April 1-11. The QRP ARCI Spring QSO Party, the SP DX Contest and the EA RTTY Contest are April 3-4. The Missouri QSO Party is April 3-5 and the Low Power Spring Sprint is April 5. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1702 - March 26, 2010

(Please note that this newscast contains 3 station identification breaks: The first at 7 minutes, the second at 12 minute and the third at 22 minutes.)

Amateur Radio Newsline report number 1702 with a release date of Friday, March 26th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Dayton Hamvention names its 2010 award winners, the FCC issues its long expected Notice of Proposed Rule Making on government paid employee volunteers taking part in emergency drills and the European Conference of Postal and Telecommunications Administrations to meet in Istanbul. What might this mean to you? Find out on Amateur Radio Newsline(tm) report number 1702 coming your way right now.

HAMVENTION 2010: DAYTON AWARD WINNERS ANNOUNCED - PART 1

The Emmy, Oscar and Tony awards of amateur radio have been announced, and this year there's a ham radio Grammy as well. But its not for music. Rather its for being for what the Dayton Hamvention Awards Committee considers the club most representative of the hobby.

Bruce
Tennant, K6PZW, is here with the story of this years Dayton award winners:

--

W4QO: "Well it was a total shock. In fact I almost got weak in the knees and fell to the floor because I didn't think they got the right guy. So it was a big shock to me."

**

That's 2010 Dayton Radio Amateur of the Year Jim Stafford, W4QO, telling Amateur Radio Newsline how he felt when he received the call from the Hamvention Awards Committee. A call telling him that he had been selected as this years top honoree.

According to the Hamvention Awards Committee, W4QO was selected for this honor based on his half century of dedication to the hobby during which he has accomplished so much that we have no time to list them all, but here ate some of them.

Stafford is a founding member of the North Georgia QRP Club, he is the past president of the North Fulton Amateur Radio League, the past president of the Metro Atlanta Telephone Pioneer Amateur Radio Club, and is a member of several other ham radio organizations. And back in 1993 he was named as the recipient the prestigious Herb Brier Instructor of the Year award by the American Radio Relay League. . He tells Amateur Radio Newsline that he enjoys just about all aspects of ham radio from DXing to home-brewing to working with youngsters who want to get to know the thrill of ham radio. He also says that it all began when he himself was just a kid:

--

W4QO: "I grew up on a farm as farm-boy in Indiana and I discovered amateur radio when I was about 15 and got my license when I was 16. And that really shaped my entire life because that lead me into looking into things like Electrical Engineering and colleges and universities that taught that. So I feel as though ham radio has played a big role in my life and anything I have done to help other people has been kind of motivated by saying '-hey it worked for me and maybe it will work for you.' "

--

The Hamvention says that it is honoring Stafford for his 50 years of service to amateur radio, his support for public service and unending efforts to recruit and develop new hams of all ages. Among his other accomplishments the Awards Committee noted was his service to the 14000 member QRP Amateur Radio Club International. Better known as QRP ARCI this group is the world-wode organization promoting the construction and operation of low powered amateur radio gear.

--

W4QO: "QRP is kind of misunderstood in a way. Most QRP'ers are tinkerers. They like to build things. And its easier to build a 5 watt radio or transceiver than it is to build a 100 watt or a 1000 watt transceiver and it costs a lot less and you can do a lot more of them if you build small transceivers. And so most people who are QRP'ers are really -- I would say -- first into construction -- build things -- build kits -- make kits -- and so on. So the organization is promoting -- as their magazine says -- it's the QRP construction and operating sourcebook."

--

The recognition of Jim Stafford, W4QO, has been greeted with enthusiasm by the Georgia ham radio community. In a posting to Q-R-Zed dot com, Bob Ross,WA2EXZ, of Roswell says that this is most deserving recognition to a great amateur radio operator as well as a wonderful man. He says that Jim Stafford gives so much of his time and energy to the hobby and service of amateur radio. He adds that Stafford has a tremendous passion for teaching others and especially the younger crowd. A group that W4QO seeks out to learn about and enjoy amateur radio.

And in a related item, the first ever Hamvention Radio Club of the Year Award will be presented to the North Fulton Amateur Radio League of Atlanta Georgia. This for both its resurgence as a major as a major provider of emergency communications as well as its work in public service and training. Wes Lamboley,W3WL, is a club spokesman. He tells Newsline that the success of the rebirth of the club is really about its members:

--

W3WL: "Its about a whole bunch of people that are really inspired to pass the word about what a great hobby amateur radio is. And our leader in getting all of this going is the ham of the year. So we are very pleased with his being the awardee this year and we are very pleased about our club being recognized as well. But we couldn't have done it without Jim Stafford's leadership".

--

By way of background, in 2006 the North Fulton Amateur Radio League was on the verge of extinction. It had only 6 to 12 people attending its regular low budget dinner and rag chew. Today, the club has grown to 260 very active members. 81% of the membership belong to the ARRL and 15% are youth. As a result, the North Fulton Amateur Radio League is now considered a truly exciting and dynamic organization, and one that proves that amateur radio clubs can change to meet the times.

HAMVENTION 2010: DAYTON AWARD WINNERS ANNOUNCED - PART 2

The 2010 Hamvention Special Achievement Award winner is Richard Ross, K2MGA. He is being honored for his half century career dedicated to serving ham radio through CQ Magazine. Better known as Dick Ross to his many friends world-wide, K2MGA began his career at CQ in 1960. He became Editor of CQ in July, 1964, when the magazine's then owner, Cowan Publishing, moved its offices from New York City to Long Island. By 1979, he was General Manager and Controller for all of Cowan Publications, which back then consisted of seven magazines. CQ was not the strongest of them, and Publisher Richard Cowan, WA2LRO, was considering shutting it down. Sensing an opportunity, K2MGA and his successor as CQ Editor, the late Alan Dorhoffer, K2EEK, bought the magazine from the Cowan family and set out to build it into a totally new publication that would instill a new vitality to the ham radio hobby.   And it did.

Dick and Al quickly got the new CQ on a solid footing and within three years, they were ready to start expanding. Popular Communications was introduced in 1982. In the years since then, CQ has published a variety of magazines and books. In 1992, the company added videos to its product line, followed by CDs, DVD's calendars and more. Today, CQ Communications publishes CQ, Popular Communications, CQ VHF and WorldRadio Online. The latter, acquired in late 2008, is the first major on-line-only ham radio magazine.

But that's not where the K2MGA story ends. Over the course of the past 50 years, Dick Ross has also become a respected leader in the ham radio community. He works closely with the many businesses that make up the ham industry, as well as with contesters, DXers and other active hams through oversight of the CQ contest and award programs. He is also responsible for starting the CQ DX, CQ Contest and CQ Amateur Radio Halls of Fame. Each of these honors outstanding amateurs in various areas of the hobby.

Dick Ross is keenly aware that the real future of amateur radio lies in the next generation of hams. As such he is a fervent supporter of bringing more youth to our hobby. He dedicates space in CQ and Worldradio Online to the achievements in ham radio by its youngest members through the "Kids Korner" column in CQ written by teenager Brittany Decker,
KB1OGL. Worldradio OnLine features the longtime popular "Youth Column" penned by 1987 Hamvention Radio Amateur of the Year, Carole Perry, WB2MGP.

In yet another youth oriented undertaking, since 1996, Dick and CQ have been one of two key corporate underwriters -- the other being Vertex-Standard / Yaesu -- of the "Amateur Radio Newsline Young Ham of the Year Award." As a result, beginning in 1996 everyone selected to be a Young Ham of the Year Award recipient has been offered the opportunity to attend Spacecamp-Huntsville and take the course of his or her choice.

Last but by no means least, this years Technical Achievement Award winner is Simon Brown, HB9DRV. Brown is being honored for his for the development of Ham Radio Deluxe. Ham Radio Deluxe or H-R-D is a suite of free Windows-based programs providing computer control for commonly used transceivers and receivers. It also includes the mapping, satellite tracking and the digital mode program called Digital Master 780.

Simon Brown was first licensed GD8IQM in February 1974. He became GD4ELI in September 1975. He now resides in what he describes as the beauty of the Swiss Alps, near Laax, Switzerland. After taking a break of 17 years from amateur radio he became licensed as HB9DRV and his interest in applying digital technology to amateur radio lead to the creation of Ham Radio Deluxe.

For the Amateur Radio Newsline, I'm .Bruce Tennant, K6PZW, in Los Angeles.

--

This years Hamvention Awards winners will be honored at Hamvention 2010 slated for the weekend of May 14th to the 16th at the Hara Arena in suburban Dayton, Ohio. In the meantime we at Amateur Radio Newsline join with the Hamvention Awards Committee and the world wide amateur radio community in congratulating this years honorees. (ARNewsline(tm) with some information provided by Hamvention 2010)

RESCUE RADIO: FCC ISSUES NPRM TO PERMIT HAM EMPLOYEES TO TAKE ART IN DRILLS

The FCC has issued a Notice of Proposed Rule Making to permit limited use of hams in their employ to take part in emergency and disaster preparedness drills. Bill Pasternak, WA6ITF, is in the newsroom with the details:

--

The FCC is proposing a limited amendment the amateur radio service rules. This, with respect to operations during government-sponsored emergency preparedness and disaster readiness drills and tests.

Current rules provide for amateur radio use during emergencies. At the same time, the rules -- specifically section 97.113 (a)(3) -- prohibits communications in which the station licensee or control operator has a pecuniary interest. This includes any communications on behalf of an employer, whether direct or indirect. Translated it means that even if a ham employee is off the clock he or she cannot take part in emergency training exercises.

The FCC says that while there are some exceptions to this prohibition, there is currently none that would permit amateur station control operators who are employees of public safety agencies and other entities, such as hospitals, to participate in drills and tests in preparation for emergency situations. Nor may they transmit messages on behalf of their employers during such drills and tests.

The FCC notes that public safety land mobile radio systems are the primary means of radio-based communications for emergency responders. But it goes on to add that experience has shown that amateur radio has played an important role in preparation for, during, and in the aftermath of natural and man-made emergencies and disasters.

The FCC says that amateur radio is often an essential element of emergency preparedness and response. Because of this, many state and local governments and public safety agencies incorporate amateur radio operators and their communication capabilities into their emergency planning. In this regard, some entities, such as hospitals, emergency operations centers, and police, fire, and emergency medical service stations, have emphasized the participation of their employees who are amateur station operators in emergency and disaster drills and tests.

Based on what it terms as a public need, the FCC is proposing to amend Section 97.113 of the Amateur Service rules to provide that, under certain limited conditions, amateur radio operators may transmit messages during emergency and disaster preparedness drills.

This, regardless of whether the operators are employees of government entities participating in the drill. It also seeks comments on whether certain other drills that are not sponsored by government agencies -- such as those conducted by hospitals -- should be included in the proposed exemption as well.

WP Docket No. 10-72 will carry a commentary cutoff date of 30 days after publication its publication in the Federal Register. Reply comments will be due no later than 45 days after publication in the Federal Register. As we go to air those dates have not yet been announced.

In the Newsroom in Los Angeles, I'm Bill Pasternak, WA6ITF.

RESCUE RADIO: CHILIAN HAMS DRAW PRAISE FOR RESPONSE TO QUAKE

There has been high praise for the Radio Club of Chile and its members following the recent earthquake and its aftershocks. At least one television news report describes the Chilean radio amateurs as a group of dedicated operators scattered across the country, proving to be an information lifeline during recent events.

According to news reports, while telephones and the internet largely failed, many of the radio operators had back-up power and were able to provide vital lines of communication. These were picked up by National Radio Chile and rebroadcast, giving status information of the various affected areas. The report went further to say that claims that ham radio is dying were put to rest as these operators provided some truly vital communication links.

For its part, the Radio Club of Chile has expressed its thanks to the world's radio amateurs for keeping emergency frequencies free during their nation's time of need. (GB2RS)

**

RADIO LAW: CEPT TO MEET IN ISTANBUL

The International Amateur Radio Union Region 1 website reports that LZ1US will represent ham radio interests at the annual European Conference of Postal and Telecommunications Administrations or C-E-P-T Civil/Military meeting of the Frequency Management Working Group. That gathering takes place over the 30th and 31st of March. It will be followed by a meeting of the CEPT WRC 12 Conference Preparatory Group Project Team C running from April 6th to the 9th.

While there are no immediate matters to concern the amateur services during the Civil/Military meeting the IARU believes that it is always a good opportunity to have a presence. This, just in case matters arise that could affect amateur radio.

But the second meeting could affect amateur radio interests. The Project Team C meeting will discuss, among other things, WRC 12 Agenda Item 1 point 23. This is the International Amateur Radio Union proposal for a secondary frequency ham radio allocation around 500 kHz. (GB2RS)

**

NAMES IN THE NEWS: VE4JS RETURNED TO MANATOBA SM OF RAC

Some names in the news. First a word of congratulations to Jan Schippers, VE4JS, who was recently returned as Section Manager for Manitoba, Canada. This, for a two year term of office that will begin on July 1, 2010. Schippers was unopposed eliminating the need for a balloted election. (RAC)

**

HAMVENTION 2010: YOUTH FORUM ADDS PRIZE FOR ADULT ATTENDEES

Carole Perry, WB2MGP, reports that Icom has offered to donate a radio as a prize for the adults attending her three hour extended Youth Forum at Hamvention 2010. This, in addition to the gear it donates to reward the young speakers taking part in the session.

According to WB2MGP, this is the first time the adults can have a chance for a prize at the Youth Forum. She adds that Ray Novak, N9JA, of Icom America has been just terrific in supporting the session through the donation of prizes for the kids and now one for the adults as well.

This years Hamvention Youth Form will be on Saturday, May 15th, 9:15 a.m. to 12:15 p.m.. The session will be held in Meeting Room 1 at the Hara Arena in suburban Dayton, Ohio. (WB2MGP)

**

NAMES IN THE NEWS: THE YOUNG IN DXCC

And congratulations also to 8 year-old William Ferguson, KJ4EYZ. This after formally being presented his DXCC certificate at a Virginia DX Century Club meeting on March 16th.by the club's Vice President, Ron Young, W8RJL.

Bill Moore, NC1L, is the ARRL's Awards Branch Manager. He says that William's achievement makes him the youngest full member of the Virginia DXCC, and one of the youngest members of the DX Century Club.

William is the son of Rich Ferguson,, N2XQM. His 10-year old sister Carissa, KJ4EZA, already has 82 countries worked. (Southgate)

**

NAMES IN THE NEWS: KF4KWW REDESIGNS 2010 YHOTY NOMINATING FPRM

And a big thank-you to Dave Crawford, KF4KWW, who maintains the Dayton Hamvention website. Dave recently offered to redesigned our 2010 YHOTY nominating form. Thanks to his effort, the form in Microsoft Word is now a download, fill in the blanks, and mail or e-mail back. Go to our website, www.arnewsline.org -- scroll down to the words "2010 Young Ham Of The Year Nominations Now Being Accepted," right click on the word "Here" and have a look at Dave's creativity. Then print it out, fill it in and nominate a worthy youngster in your area. (ARNewsline(tm))

EMERGING TECHNOLOGY: NEW FORMAT OF HARD DRIVE STORAGE COMING IN 2011

Hard drives are about to undergo one of the biggest format shifts in 30 years. Amateur Radio Newslines Norm Seeley, KI7UP, has more:

--

By early 2011 all magnetic hard drives will use an advanced format that changes how they go about saving the data people store on them. The move to the advanced format will make it easier for hard drive makers to produce bigger drives that use less power and are more reliable. However, it might also mean problems for Windows XP users who swap an old drive for one using the changed format.

According to Science On-Line, since the days of the original DOS operating system, the space on a hard drive has been formatted into blocks 512 bytes in size based on the floppy disks of that era. Each 512 byte sector has a marker showing where it begins and an area dedicated to storing error correction codes. In addition a tiny gap has to be left between each sector.

While 512 bytes made sense hard drives were only a few megabytes in size, its of less significance when drives can hold a terabyte or more of data. As a result, in large drives this wasted space where data cannot be stored can take up a significant proportion of the drive.

Drive makers say that moving to an advanced format of 4 kilobyte sectors means about eight times less wasted space. This will allow drives to devote twice as much space per block to error correction technology.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

Through the International Disk Drive Equipment and Materials Association all hard drive makers have committed to adopting the 4 Kilobyte advanced format by the end of January 2011. These manufacturers same have begun an education and awareness campaign to let people know about the introduction of the news advanced format. Also, to warn about the problems it could cause for users of older operating systems such as Windows XP or ME. This is because Windows XP, ME, 2000 and the like were all released well before the new 4 kilobyte format was decided on. (Science OnLine)

HAM RADIO IN SPACE: AO-51 FM REPEATER TO BE DEDICATED TO SCOUT JAMBOREE

AMSAT North America will be supporting the Boy Scouts of America 100th Anniversary Jamboree. This, by dedicating an AO-51 VHF UHF FM repeater in space for the event.

From Friday April 16th, at 15:00 UTC until Sunday April 18th at 19:00 UTC, an AO-51 repeater will be allocated for Jamboree use. The frequencies used will be 145.880 MHz uplink, and 435.150 MHz downlink. The mode will be narrowband FM and no tone access will be required.

All regular AO-51 users are requested to give priority to Jamboree stations or QSO's with Jamboree stations.

AMSAT adds that it wishes the Scouts good luck operating via the AO-51 satellite for this milestone event and so do we. (AMSAT)

**

HAM HAPPENINGS: INTERNATIONAL LIGHTHOUSE AND LIGHTSHIP WEEKEND NOW PLANNING

A total of 100 registrations have been received so far at the website collecting entries for the 2010 International Lighthouse and Lightship weekend. The event is slated for the weekend of August 21st and the 22nd.

This will be the 11th annual outing of this event sponsored by Scotland's Ayr Radio Group and its station GM0AYR. The registrations to date are from 19 countries with nearly half of them from Germany and Australia who always strongly support this fun event. Other countries taking part include Argentina, Belgium, Chile, Denmark and England to name only a few.

To register or check out the lighthouses already registered, visit the official website at illw dot net on the World-Wide-Web (ILLW)

**

DX

In DX, two operations from Mauritius make the news this week. The first is by DL6UAA and operating as 3B8MM beginning on April 4th, The duration of his stay will be 3 weeks operating 160 through 10 meters mostly CW with some SSB and digital possible. QSL via DL6UAA, either direct or via the bureau.

And SP2JMB, will be active from Mauritius between April 7th through the 14th as 3B8SC/ His operation will be on all of thr High Frequency bands operating C-W only. QSL via his home callsign.

The Mongolian Radio Sport Federation has opened a QSL Bureau. Its address is MRSF QSL Bureau, PO Box 573, Ulaanbaatar 16092, Mongolia.

DL3OCH will be active from the Maldives as 8Q7QX through April 4th. Operation will be mainly on
40 through 12 meters mostly on CW and possibly some RTTY and PSK31, QSL via his home callsign.

Lastly, G0SGB will be active from Malta portable 9H3 between June 12th and the 25th. He will also be active from Gozo through no specific dates for this part of the operation has been announced. His activity will focus on lighthouse activation's. QSL via his home callsign, direct only.

(Above from various DX news sources)

**

THAT FINAL ITEM: 600 METERS ALIVE DOWN UNDER

And finally this week, an old Very Low Frequency transmitter has come back to life down-under thanks to the dedication of a group of ham radio operators. Jim Meachen, ZL2BHF, has the rest of the story:

--

The General User Radio Licence for Amateur Radio Operators detailed in the New Zealand Gazette of 18th February, and effective from the 1st of March, included the additional frequency range 505 - 515 KHz for New Zealand Amateur Radio Operators.

This new allocation was great news to the Suburban Amateur Radio Club Branch 86 NZART which is based at the Musick Memorial Radio Station at Bucklands Beach in Auckland. Established in 1942 the Musick Point radio station with the callsign ZLD was formerly a base for the New Zealand Post Office aeronautical and maritime communications. Over the past decade or so members of the Suburban Amateur Radio Club have worked tirelessly restoring equipment associated with the 600 metre band to operating condition. I asked Ian Walker ZL1BFB the Chairman of Suburban Club what the new allocation would mean for the Club:

--

Actuality audio here: Hear it by downloading this weeks MP3 audio file at www.arnewsline.org

--

On Saturday 13th March the Suburban Amateur Radio Club held a special event to commemorate the introduction of 600 metres to the NZ Amateur Radio Bands. At zero hundred hours gmt former operator Ramon Chandler ZL1ARY threw the switch and ZL1ZLD was on the air on 512 KHz.

--

Actuality audio here: Hear it by downloading this weeks MP3 audio file at www.arnewsline.org

--

Since at this time not many New Zealand Amateurs have transmitting capability on 600 metres a call back frequency to ZL1ZLD was established 3686KHz. Operators said that it was rewarding to get a few call backs with acknowledged reception of ZL1ZLD's signal on 512KHz. Club Chairman Ian Walker ZL1BFB reflects on the occasion:

--

Actuality audio here: Hear it by downloading this weeks MP3 audio file at www.arnewsline.org

--

Indeed, restoration work at the station has been a project over many years and how rewarding it is for the Suburban Amateur Radio Club team to see the Dansk transmitter in service once again on 600 metres.

You can find more information on the Suburban Amateur Radio Club and the Music Memorial Radio Station ZL1ZLD under Northern Branches on the NZART Web page.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF.

--

You can find more details on the Suburban Amateur Radio Club and the Musick Memorial Radio Station ZL1ZLD at http://www.nzart.org.nz/branches/sarc/index.htm) (ZL2BHF)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

And less we forget, a speedy recovery to RAIN producer Hap Holly following back surgery and to Newsline's own Don Wilbanks AE5DW, and his wife Dawn on their recent weight loss surgery. We know that you join in wishing all three the very best.

For now, with Bill Pasternak, WA6ITF, at the editors desk -- who is also planning weight loss surgery, -- I'm Fred Vobbe, W8HDU, saying 73 and we thank you for listening.

The current Administration operates on the worldview that Government
knows best. You may ultimately get your wish by means of the Federal
Government subsuming private relief organizations like RC and SA.

Another widely held misconception. While lead melts around 650 F, it doesn't boil (vaporize) until at least 1400 F.

What you're smelling is the rosin flux. And yes, that stuff ain't healthy for you. (See UK Safety bulletin:)

Another widely held misconception. While lead melts around
650 F, it doesn't boil (vaporize) until at least 1400 F.

What you're smelling is the rosin flux. And yes, that stuff
ain't healthy for you. (See UK Safety bulletin:)

http://www.hse.gov.uk/pubns/indg248.pdf

What you do have to look out for, with regard to the lead, is
washing your hands before you eat after working with solder.

SB QST @ ARL $ARLB012 ARLB012 ARRL, Red Cross Sign Memorandum of Understanding

ZCZC AG12 QST de W1AW   ARRL Bulletin 12 ARLB012
>From ARRL Headquarters
Newington CT March 30, 2010 To all radio amateurs

SB QST ARL ARLB012 ARLB012 ARRL, Red Cross Sign Memorandum of Understanding

On Thursday, March 25, ARRL President Kay Craigie, N3KN, signed a new Memorandum of Understanding (MoU) with the American Red Cross (ARC) at ARC National Headquarters in Washington, DC. The MoU, which replaces an earlier Statement of Understanding that expired in 2007, provides a "broad framework for cooperation" between the ARRL and the ARC "in preparing for and responding to disaster relief situations at all levels in rendering assistance and service to victims of disaster, as well as other services for which cooperation may be mutually beneficial."

The ARRL Board of Directors approved the signing of the MoU at its January 2010 meeting following the completion of negotiations. The Red Cross requires the completion of a criminal background check to participate in Red Cross activities and provides a process by which a volunteer may have a criminal background check performed at no cost to the volunteer.

In the case of ARRL volunteers, the Red Cross has agreed to accept an alternative process: ARRL volunteers may arrange, at their own initiative and expense, to have the criminal background check performed by a state or local law enforcement agency.

The Red Cross also has agreed that ARRL volunteers shall not be asked or required to consent to credit checks, mode of living investigations or investigative consumer reports in order to provide a communications function.

The ARRL and the Red Cross encourage interested volunteers in their respective organizations to become members and to participate in the activities of the other organization. ARRL volunteers should be aware that if they wish to become Red Cross volunteers, they may be required to consent to additional background checks in accordance with Red Cross policy that may include credit checks, mode of living investigations or investigative consumer reports.

Per the MoU, "both ARRL volunteers and ARC workers will work cooperatively at the scene of a disaster and in the disaster recovery, within the scope of their respective roles and duties as recommended."

During a Red Cross Disaster Relief Operation (DRO) and depending on their training and qualifications, ARRL volunteers may perform in one or more of several roles, including Amateur Radio Liaison, Communication Equipment Operator, Communication Equipment Installation/Repair and Disaster Assessment. ARRL volunteers who are assigned roles by the Red Cross during a DRO will be provided with Red Cross credentials as required by the role, consistent with Red Cross policy.

"Because of the importance of emergency communications, we are happy to be able to continue the League's long-standing relationship with the American Red Cross," said ARRL President Kay Craigie, N3KN. "The ARC and other served agencies give Amateur Radio operators the worthwhile missions in our communities that allow us to thank America for the privilege of being hams."NNNN/EX

==> PUBLIC SERVICE: ARRL SIGNS MEMORANDUM OF UNDERSTANDING WITH AMERICAN RED CROSS

On Thursday, March 25 ARRL President Kay Craigie, N3KN, signed a new Memorandum of Understanding (MoU <http://www.arrl.org/news/files/ARRL-ARC_MoU.pdf>) with the American Red Cross (ARC <http://www.redcross.org/>) at ARC National Headquarters in Washington, DC. The MoU, which replaces an earlier Statement of Understanding that expired in 2007, provides a "broad framework for cooperation" between the ARRL and the ARC "in preparing for and responding to disaster relief situations at all levels in rendering assistance and service to victims of disaster, as well as other services for which cooperation may be mutually beneficial." Read more here <http://www.arrl.org/news/stories/2010/03/30/11412/?nc=1>.

==> PUBLIC SERVICE: AMATEUR RADIO ASSISTS WITH RESCUE IN GREAT SMOKY MOUNTAINS

On Sunday, March 28 -- a day with a lot of rain, wind, sleet and, fog -- John Oakberg, NK4N, of Sevierville, Tennessee, went out hiking in the Great Smoky Mountains National Park near Mt LeConte. When he was about 1 mile up from Alum Cave Bluff, he came across Judy Potter, 57, of Atlanta who had broken her ankle while on the trail. Oakberg reached for his cell phone to call 911, but there was no coverage available. He then reached for his handheld transceiver and put out a call to any Amateur Radio operators who may be listening via some nearby VHF 2 meter repeaters. Read more here <http://www.arrl.org/news/stories/2010/03/30/11411/?nc=1>.

==> NEW ARRL WEB SITE UNDERGOES FURTHER TESTING BEFORE LAUNCH

According to ARRL Chief Operating Officer, Harold Kramer, WJ1B, we are currently finishing the final pre-launch adjustments and testing the new ARRL Web site and plan to launch it by April 12. "This launch has been a longer than anticipated process for all of us," Kramer said, "but we have learned a lot during the past two years as we conducted research about what people want from the ARRL Web site. We created a new architecture and navigation scheme to meet those needs and we implemented a contemporary new design. After that, we updated our current Web content and created lots of brand new content, including multimedia. We then began integrating the incredibly complicated functionality, e-commerce, advertising and database connections from the current Web to the new Web site. It has been a lot of work, and while it is disappointing that we are not out the door quite yet, we are now in the home stretch. When the new ARRL Web site debuts, we just want to be sure that it looks great, works well in meeting the needs of our members and that it is something that we can all be proud of."

==> AMATEUR RADIO IN THE CLASSROOM : 2010 ARRL TEACHERS INSTITUTE BEGINS WITH A BANG IN TUCSON

The ARRL Teachers Institute on Wireless Technology (TI) began its 2010 sessions in February with a TI course designed specifically for teachers in the Tucson (Arizona) Unified School District (TUSD). Taught at Jefferson Park Elementary School, 21 educators -- including the school principal, school counselor and three resource personnel -- took part in five Saturday sessions, working through an expanded 45 hour Teachers Institute (TIs usually are done in about 32 hours). The teachers completed homework assignments that included building the clock kit, building a flashing LED Santa and reading the first two chapters of What's a Microcontroller? In addition, five parents attended the TI as observers. The course was taught by TI Instructor Miguel Enriquez, KD7RPP, who teaches in the TUSD. Read more here <http://www.arrl.org/news/stories/2010/03/31/11413/?nc=1>.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, including signing a new Memorandum of Understanding with the American Red Cross, preparing for WRC-12, legislative actions, holding workshops to help teachers introduce wireless technology in their classrooms, promoting on-the-air events, investigating power line noise and more. This installment covers the month of March. Read more here <http://www.arrl.org/news/features/2010/04/01/11415/?nc=1>.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- to be held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan. The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Be sure to get your comments in by Monday, April 5. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> SOLAR UPDATE

Tad "The uncertain glory of an April day, which now shows all the beauty of the Sun <http://shakespeare.mit.edu/two_gentlemen/two_gentlemen.1.3.html>" Cook, K7RA, reports: Last week's bulletin <http://www.arrl.org/news/stories/2010/03/26/11408/?nc=1> said new sunspot group 1057 appeared March 23, but it was actually short-lived group 1056 according to summaries <http://www.swpc.noaa.gov/ftpmenu/forecasts/SRS.html>. Group 1057 emerged on March 24, and on March 25 1056 became a plage <http://en.wikipedia.org/wiki/Plage_29> without spots.
Sunspot group 1058 arrived March 26, but was gone two days later when 1059 emerged. Group 1059 has not become as large as 1057. From March 28-April 1, the size in millionths of the Sun's surface was 120, 100, 150, 130 and 70. But the size of 1057 from March 24-April 1 was 5, 240, 400, 320, 380, 410, 290, 260 and 250. Group 1059 is surely fading, but 1057 may be holding steady, even though it is down from peaks of 400 and 410 on March 26 and 29. The average daily sunspot numbers for the week were up more than 4 points to 28.9, and the average daily solar flux changed from 84.2 to 84.9. The renewed sunspot activity seems constant and steady. We have new 3-month moving averages of daily sunspot numbers through the end of March, which is centered on February, and the number has increased a few points from last time. The 3-month moving average of daily sunspot numbers centered on July 2009-February 2010 was 4, 4, 4.6, 7.1, 10.2, 15.2, 22.4 and 25.7. The rate of increase has slackened, but it steadily moves higher. Look for more information on the ARRL Web site on Friday, April 2, where Tad will have a bit more about the numbers, a visit to NWRA -- the home of the Effective Sunspot Numbers -- and reports on recent conditions. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by William Shakespeare's Two Gentlemen of Verona <http://shakespeare.mit.edu/two_gentlemen/two_gentlemen.1.3.html> (Act I, Scene 3).

==> THIS WEEK ON THE RADIO

This week, the Lighthouse Spring Lites QSO Party is April 1-11. The QRP

ARCI Spring QSO Party, the SP DX Contest and the EA RTTY Contest are April 3-4. The Missouri QSO Party is April 3-5 and the Low Power Spring Sprint is April 5. Next week, look for the Montana QSO Party on April 9-11. The Japan International DX Contest, the QCWA Spring QSO and the Georgia QSO Party are April 10-11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL RECOGNIZES: RUDY SEVERNS, N6LF, WINS MARCH QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for March is Rudy Severns, N6LF, for his article "An Experimental Look at Ground Systems for HF Verticals." Congratulations Rudy! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the April issue by Friday, April 30.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/courses-training> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

I'm a retired geezer studying for my technical license. I fully intend to learn morse code and not at a mere 5wpm. I figure one is not truly a ham until one can cw, so I'm hot on it, listening to the Koch method to learn code. I'm also looking for a GOOD straight key.

I want to invest in quality, but am not wealthy. I was gonna buy a Vibroplex Know Code key, but the reviews are less than heartening.
So, I talked to Al at Milestone Technologies and he said something that

kinda set me back on my heels. He claimed a straight key is not much good for anything over 15 wpm. Yikes!

Am I unnecessarily knocking myself out trying to learn code at Just Learn Code's default 20wpm? Dropping down to 15wpm sure would speed up the learning curve. If I want to eventually make 20wpm and faster, would I be better off with a less expensive straight key in the beginning and later investing the money in a quality bug? I want to go bug before paddles and keyers. I guess the bottom line is, do I want to graduate to a bug as soon as possible and maybe lower my initial goals for a straight key. IOW, just get on the air? ;)

Any advice is appreciated.

Amateur Radio Newsline(tm) Report 1703 - April 1 2010

Amateur Radio Newsline report number 1703 with a release date of Thursday, April 1st, 2010 to follow in 5-4-3-2-1.

The following is a QST. The ARRL and the American Red Cross finally sign a new Memorandum of Understanding. What might this mean to those of you involved in rescue radio? Also, a crossband repeater will be launched into space in November, a bill to have engineers as advisors to the FCC Commissioners moves forward and a message to families with a member who is a ham: There is hope! Find out the details on Amateur Radio Newsline(tm) report number 1703 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: ARRL AND RED CROSS SIGN NEW MOU

Its going to be business as usual between the American Red Cross and the American Radio Relay League. This as the two sign a new Memorandum of Understanding to continue their joint public service and humanitarian work. Mark Abramowicz, NT3V, is at our North-East Bureau with the details:

--

The signing of this new Memorandum of Understanding by the ARRL's President Kay Craigie, N3KN, completes a process whose intent was to preserve the role of amateur radio in Red Cross operations without ARRL volunteers being subjected to what some felt were intrusive background checks by an independent company.

In a statement accompanying the March 25 signature on the document, Craigie noted: "Because of the importance of emergency communications, we are happy to be able to continue the League's long-standing relationship with the American Red Cross."

But nearly four years ago, when this issue rose to a boil among amateurs who worked with the Red Cross, it was anything but assured that the ARRL would be seeing an easy resolution to this situation.

In 2006, the American Red Cross began requiring all of its volunteers to submit to a criminal background check by an independent organization it had hired called MyBackgroundCheck.com.

Those who went to the company's website also found that MBC was requiring consent for a credit check and mode-of-living investigation.

Essentially, the company wanted to gather a broad range of personal information that would go to "character, general reputation (and) personal characteristics."

MBC clearly stated on its website at the time that the background check would be "all-encompassing."

In an October 2006 advisory, ARRL President Joel Harrison W5ZN, suggested ARRL members become aware of what they were allowing MBC to gather.

And, while the American Red Cross assured ARRL at the time that it was strictly interested only in the criminal background check, its contractor - MBC - still had the right to gather the other information on an applicant's background.

That sparked invasion of privacy concerns and a whole host of other issues and some communications volunteers walked away.

The compromise hammered out in the new Memorandum of Understanding allows ARRL radio volunteers to arrange at their own expense a criminal background check performed by a state or local police agency.

The Red Cross also agrees under the memorandum that ARRL volunteers won't be asked or required to submit to credit checks or any kind of investigative consumer reports or lifestyle investigations.

The memorandum stipulates that ARRL and Red Cross volunteers will cooperate at disaster scenes and allows for ARRL volunteers to perform such roles as amateur radio liaison, communication equipment operator, communication equipment installation and repair technician and even take part in disaster assessment.

And, the Red Cross agreed that during a Red Cross Disaster Relief Operation, Red Cross credentials will be provided to ARRL volunteers as required and consistent with Red Cross policy.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Hopefully, this new Memorandum of Understanding will allay the fears of those hams who objected to the Red Cross using an outside contractor to do background checks on those who want to volunteer. (ARRL)

**

RESCUE RADIO: HAMS BECOME THE EARS OF 911 IN LINCOLN NB. AS TELECOM SWITCHING FAILS

I'm Bill Pasternak, WA6ITF, with breaking news:

--

K0NEB: "I'm at 48th and Cornhusker right now in Lincoln, Nebraska, and we are on the major intersections in Lincoln in case somebody needs to call 911 for any kind of emergency."

--

That's Joe Eisenberg, K0NEB, who is just one of a large number of Lincoln, Nebraska area hams who are stationed all across the city. This, after a major failure of telecommunications provider Windstream's switching system wreaked havoc on phone service in Lincoln and across much of Southeast Nebraska on Thursday, April 1st. The outage that began at about 7 a.m. Central time disabled 911 from both dial up and cellular service in several communities including the city of Lincoln.

According to the latest news reports, by early afternoon, landline service in Lancaster County had been restored but cellular service into 911 still was not operating. As a result, an unknown number of hams are still at major area intersections. They are primarily using the Lincoln 146.76 MHz repeater to relay emergency messages to authorities. How long they will be out there as 911 back-up is not known as we go to air.

More on this next week. Jim. (ARNewsline(tm))

**

HAM RADIO IN SPACE: CROSSBAND REPEATER IN SPACE TO LAUNCH IN NOVEMBER

A true crossband repeater should be on-orbit by years end. This with word that three small research satellites with amateur radio educational payloads are scheduled for launch in late November with one being billed as a true crossband relay device.

The new CubeSats come from Montana State University, the University of Colorado and Kentucky Space as part of NASA's Educational Launch of Nanosatellite mission. And it's the one from Kentucky that's of interest to the ham in the street.

KySat-1 is believed to be the first ever CubeSat to carry a 2 meter-to-70 cm FM transponder. This will make it a true crossband repeater in space and one that should be accessible by most radio amateurs within its flight path.

For those not aware, CubeSats are in a class of small research spacecraft called pico-satellites. They have a volume of about one quart and weigh no more than 2.2 pounds. The University of Florida was selected as an alternate in case one of the three primary spacecraft cannot fly. (ANS)

**

RADIO POLITICS: IARU REGION TO MEET IN EL SALVADOR

The 17th session of the International Amateur Radio Union Region 2 General Assembly will take place from October 4th to the 8th in El Salvador. This meeting will be hosted by the Club de Radio Aficionados de El Salvador. Matters to be discussed include the promotion and defense of amateur radio, High Frequency band plans along with other issues of importance to member societies within the region. More information is available on line at http://elsalvador2010.org/en/ (Southgate)

**

RESCUE RADIO: FCC GRANTS 97.113 WAIVER TO LA SHERIFF DEPT FOR TWO EXERCISES

The waivers to section 97 dot 113 of the Amateur Service Rules to permit various entities to use employee hams in emergency training exercises continue to be granted. The latest is to the Los Angeles County Sheriff's Department in California that requested a permit for certain amateur radio licensees to transmit communications on behalf of their employer during upcoming government emergency drills.

The venue for this drill are two medical centers operated by Providence Little Company of Mary. The purpose of the exercises is to demonstrate reliable equipment operation and operator proficiency as a means of back-up communications between and among hospital facilities, law enforcement agencies, and emergency operations centers. This, in the event that normal communications channels are unavailable.

An exercise with emphasis on Providence's Torrance, California, facility will take place on April 22nd. Another with emphasis on Providence's San Pedro facility will take place on June 17th. In total the drills involve 17 hams employed at the two facilities. Participants for the Sheriff's Department will be non-employee volunteers, who do not require a waiver.

In granting the request, the FCC says that the waiver to Section 97 dot 113 of the Amateur Service Rules is warranted in the public interest under the circumstances requested. (FCC)

**

RESCUE RADIO: FCC GRANTS KC 97.113 WAIVER REQUEST IN KANSAS CITY

The FCC has also issued a Part 97.113 waiver to Wyandotte County KCK Emergency Management of Kansas City, Kansas. This also to permit certain Amateur Radio Service licensees to transmit communications on behalf of their employer during an upcoming government emergency drill.

In his March 23 request, Larry Eker who is the Program Coordinator of Homeland Security for Wyandotte County Emergency Management told the FCC that the County will be participating in a Kansas City Metro Mass Causality Incident Exercise titled Perfect Storm. That it is to take place on April 7th from 8:00 a.m. to 5:00 p.m. at several locations in Platte County, Missouri, and Wyandotte and Johnson Counties, Kansas.

Scot Stone is the Deputy Chief of the Mobility Division of the FCC's Wireless Telecommunications Bureau. He said that in granting the waiver for the dozen requested government employed hams to take part, that granting of the waiver request is appropriate under the circumstances presented. This because the public interest is served in facilitating the April 7th public safety exercise and by permitting the amateur licensees to take part. (FCC)

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA6TWF Super System serving the world from Los Angeles California.

(5 sec pause here)

**

RESCUE RADIO: HIKING HAM BECOMES FIRST RESPONDER

A ham radio operator truly became a first responder on Sunday morning March 28th. It happened when John Oakberg, NK4N, was hiking in the Great Smokey Mountains National Park near Mount LaConte. That's where he came across a 57 year old female hiker who has sprained or broken her left ankle and leaving her unable to walk back down off the hill.

Oakberg and several others in the woman's hiking party first tried cellular phones to summon assistance but there was no service available where they were. But NK4N had with him a hand held transceiver with which he was able to put out a call for assistance over several local repeaters. As Oakberg's signal was noisy into all of the repeaters but two other hams identified as Dean Webb, N4NLT, operating mobile and Cleve Hayes, KB4UAL, at his home who could hear NK4N direct. They assisted in relaying data to Scott Wyrick, KD4CWB. After obtaining the necessary information KD4CWB called the National Park Service dispatcher, relayed the facts and requested a rescue team to be dispatched.

It took a few hours but rescuers were finally able to reach the victim and successfully carry her to safety. Paramedics treated her on the scene but she refused transport via ambulance and left the area in a private vehicle. Reportedly her hiking group took her to the Sevier County Medical Center for additional treatment. (KD4CWB)

**

RESCUE RADIO: HAMS TAKE PART IN SIMULATED TSUNAMI DRILL

Amateur radio was part of an simulated tsunami emergency training exercise along the Northern California coastline held on March 24th. Timothy Hanna, WB9JNS, a member of the Mendocino County Amateur Radio Communications Service, was one of over a dozen hams that participated in a portion of the test involving the use of amateur radio.

Through the use of ham radio channels, the Mendocino County Amateur Radio Communications Service was able to have contact with an emergency operations center in Eureka. The message Hanna and his associates sent was a simulated report of conditions in Mendocino County.

Hanna told the Ukiah Daily Journal that in all, hams demonstrated at least four separate methods of getting in contact with Humboldt County. A total of 13 licensed Ham radio operators involved in the training exercise. (Ukiah Daily Journal)

**

RADIO LAW: BILL TO ADD ENGINEERS TO COMMISSION MOVES ON

A bill that would allow each FCC commissioner to add an electrical engineer or computer scientist to his or her staff has been approved by the Senate Commerce Committee.

Called the FCC Commissioners' Technical Resource Enhancement Act, the proposed legislation says that the new technical staffers would provide the commissioners with technical consultation when appropriate. They would also interface with the Office of Engineering and Technology, commission bureaus, and other technical staff of the commission for additional technical input and resources.

As previously reported, the bi-partisan bill was co-sponsored by Senators Olympia Snowe and Mark Warner. A similar was introduced in the House by Representative Jerry McNerney earlier and has been referred to the House Commerce Committee. (Adapted from Radio Ink)

**

ELECTRONICS DISPOSAL: CEA SETS UP RECYCLING WEBSITE

With the digital television transition now almost a year old and new flat panel sets selling as fast as they can be manufactured, the Consumer Electronics Association has commented on an aspect of the transition that hasn't been too widely discussed. That being what to do with all those old analog television receivers.

In its well publicized remarks, the Association is urging consumers to take advantage of the many ways to safely dispose of used analog TV sets. It noted that it offers a list of manufacturer and retailer electronics recycling programs as well as a searchable database of electronics recyclers by Zip code on its web site.

The Association also says that many consumers are unaware of other local options for recycling unused consumer electronics products. It emphasizes that its website site lets consumers access ways to find electronics recycling opportunities in their area and other information as well. The Consumer Electronics Association's electronics recycling website is located in cyberspace at www.mygreenelectronics.org. (RW)

**

HAM HAPPENINGS: RAIN DROPS TELEPHONE DIAL IN SERVICE

RAIN, the Radio Amateur Information Network produced by Hap Holly, KC9RP, has discontinued its dial-up outgoing programming service effective April 1st and will only be available over the World Wide Web. This, due to a lack of activity on the phone line that has been provided to Hap by Uddle Systems.

As with most ham radio audio providers, RAIN has found that the majority of its listeners prefer the quality of downloadable audio over the Internet to the relatively constricted trait obtainable over a normal telephone. So it is shifting its entire emphasis to digital distribution from its website at www.therainreport.com. There you can find the latest programming provided by KC9RP along with files and podcasts from the last three years.

And less we forget, Hap had his back surgery and his recovery is progressing well. Once out of the hospital he will be in rehab for several weeks. During this period, RAIN listeners will be treated to highlights of shows from the past. Get well wishes can be sent by e-mail to hap at the rainreport dot com or by regular mail to his callbook address. (RAIN)

THE SOCIAL SCENE: CROATION TELEGRAPHY CLUB OFFERS FREE MEMBERSHIP

If you like CW, the Croatian Telegraphy Club invites you to become a member. Joining by E-mail is free and every member is also inducted into the European CW Association as well. More is on-line at www.hamradio.he/ctc. (Croatian Telegraphy Club)

**

THE SOCIAL SCENE: SOUTHEASTERN VHF SOCIETY CONFERENCE APRIL 23 - 24

Registration is still open and available for this years Southeastern VHF Society Conference to be held at Morehead State University in Morehead, Kentucky from April 23rd to the 24th. You can download more information about the conference and a registration form at www.svhfs.org/conference.html (WA4KXY via VHF Reflector)

**

HAMVENTION 2010: K4SV TO SPEAK AT SWODXA DAYTON DX DINNER

The SouthWest Ohio DX Association has announced that their speaker for their 25th annual DX Dinner on May 14th, will be Dave Anderson, K4SV. The DX Dinner is held annually in conjunction with the Dayton Hamvention, this year at the Crowne Plaza Hotel, Dayton, Ohio. Door prizes include an Icom IC7600 transceiver and an Alpha 8410 amplifier. More is on-line at www.swodxa.org (SWODXA)

**

HAMVENTION 2010: PANEL ALMOST COMPLETE FOR 2010 HAM RADIO TOWN MEETING

The panel is now almost complete for this years Amateur Radio Town Meeting to be held on Saturday, May 15th at the 2010 Dayton Hamvention. This years Town Meeting is titled "Amateur Radio As A Way To Find Or Keep A Job In Today's Shrinking Job Market", and in reality it will be a job advisory fair of sorts. One where people who have built their careers in part or in total because of being radio amateurs will share their experiences with you.

This year brings some new names to the long running Town Meeting panel. Among them is Diana Eng, KA2UHB. Diana is a New York City based fashion designer who integrates electronics into many of her of her designs. A former Project Runway contestant, KA2UHB also produces and hosts on-line videos explaining the various aspects of electronics, communications and ham radio.

From the ARRL comes Allen Pitts, W1AGP who is the League's Media Realizations specialist. Simply said, his job background will amaze and astound you. Allen has truly been there and done that. Now he will share his knowledge with all of you.

And we will also have a presenter who can answer the question of what to do when you are nearing retirement and the company you have spent most of your lifetime working for suddenly folds. So there you are without a job or a pension to fall back on. That's what happened to Bob Sherman, K2SJP, but thanks to being a ham radio operator since his teen years a new career in the same industry was not that far away.

They, along with returning speakers that include Heil Sound's Bob Heil, K9EID, ABC television's Steve Mendelsohn, W2ML, and Rich Moseson, W2VU of CQ Magazine will make up the panel of experts.

As usual we will be in Meting Room 2 from 11:45 a.m. to 2 p.m. at the Hara Arena on Saturday, May 15th. If you are at Hamvention 2010, please join us. We will not have all the answers, but hopefully we will at least be able to give you some general guidance in gaining employment or keeping a job you now have. (ARNewsline(tm))

EMERGING TECHNOLOGY: WORLDS SMALLEST SUPERCONDUCTOR REVEALED

Science Daily reports that researchers have discovered the world's smallest superconductor. This, in a sheet of four pairs of molecules less than one nanometer wide. On March 29th, the Ohio University led study, published as an advance online of its findings in the journal Nature Nanotechnology. It provides the first evidence that nanoscale molecular superconducting wires can be fabricated. These it says could be used for nanoscale electronic devices and energy applications. The study also is noteworthy for providing evidence that superconducting organic salts can grow on a substrate material. You can find out more at www.sciencedaily.com/releases/2010/03/100329112151.htm (Science Daily)

**

WORLDBEAT: RADIO SWEDEN TO END MW AND SW BROADCASTS

Radio Sweden will end its medium and short wave broadcasts on October 31st. This, in favor of web services that the broadcaster believes to be the best use of resources and in line with international trends.

According to a news release the English-language service is to continue on the web and on national over the air broadcasts. The Russian transmissions will be available only on the web, as is the German service is now. (Worldwire)

**

WORLDBEAT: NEW VIDEO OF THE RADIO DOCUMENTATION CENTER IN VIENNA

A visit to radios golden past is now available on-line. Amateur Radio Newsline's Fred Vobbe, W8HDU, has the story of the journey:

--

Jonathan Marks, G8WGN, the former host of Radio Netherlands Media Network has made available a video of his visit to the Radio Documentation Center in Vienna, Austria. That's the home to millions of QSL cards, magazines and other radio related documents.

Marks says that he was there in September of 2009 that his colleague and friend Wolf Harranth, OE1WHC. Harranth showed Marks around the world's largest collection of radio related documents that contains artifacts from both from the broadcast and amateur radio world. OE1WHC also shared a bit of his own philosophy as to the reason for the archive:

--

OE1WHC: "Its always great fun to listen to the radio and to transmit yourself . To listen to amateur radio. Communications is fun; sometimes its sad but its sad fun at that time."

--

Marks notes that there are millions of QSL cards, magazines, books and unique government records that tell the story of communication across international borders. He adds that the center survives on help from volunteers and he hope that his video will help to explain why they are so passionate about preserving the golden age of international radio.

For the Amateur Radio Newsline. Im Fred Vobbe, W8HDU.

--

The video that was shot in High Definition. Part 1 of this is on line at http://vimeo.com/10320815. Marks says that Part 2 will follow shortly. More information in both English and German at http://dokufunk.org.   (Southgate)

WORLDBEAT: NEW MORE ISLAND IS NO MORE ISLAND

If you are thinking of sponsoring a DXpedition to New Moore Island in the Sunderbans you might as well forget it. This is because the disputed island in Bay of Bengal has disappeared into sea.

For nearly 30 years Bangladesh and India have argued over ownership of a tiny rock island in the Bay of Bengal. Now Mother Nature has resolved the dispute for them. Due to rising sea levels, as of March 24th the island's gone.

According to news reports, its disappearance below the waves has been confirmed by satellite imagery and sea patrols and one might now say that New Moore Island is, no more. (Published news reports)

**

DX

In other D-X, the long hoped for Jan Mayen DXpedition is now set for July 4th to the 16th of 2011 and will be lead by SQ8X. He and his group of operators plan to be on the air for 10 to 12 days with 2 to 3 stations. More details will be forthcoming later this year.

F4EGZ, is active portable FR from Reunion Island. He will be there through April 19th operating 20 through 6 meters. He will accept 6 meter skeds via E-mail at f4egz (at) yahoo (dot) fr. Please QSL via his home callsign.

Six female operators will be on the air as OX6YL from the western edge of Greenland between September 16 and the 20th. Activity will be on the HF bands using CW and SSB. A Web site for this operation is currently under construction at www.qsl.net/la6rha/greenland

According to a report from the South African Radio League, its again been noticed that some operators in IARU Region 1 have been operating outside the allocation of the 160 meter band. The low frequency limit in Region 1 is 1810 kHz. This makes it illegal to work stations in IARU Regions 2 and 3 who are operating below that frequency.

A DXpedition to Mozambique is now slated for October which will include a scouting Jamboree on the Air or JOTA operation from the capital Maputu. The group also plans to operate the CQ World Wide SSB contest from the city of Xai Xai. For more information on the DXpedition check out the web pages at www.3da0ss.net

Lastly, V73NS who is just finishing up his operation from Kwajalein will be deploying to Afghanistan
at the end of April. Neil told the OPDX newsletter that once there, he will have his radio sent to him. He says that he plans to operate QRP CW only. QSLs for his V73NS operation should be sent direct via W3HNK.

(Above from various DX news sources)

THAT FINAL ITEM: STUDY INDICATES HAMS CAN BE SAVED FROM HAM RADIO

And finally this week, some good news from the world of science for the families of hams. There is hope for recovery! Recovery from what you ask? Newsline roving correspondent Pierre Pullinmyleg is here with the answer in his annual, April 1st report:

--

Researchers at zee American Museum of Natural History have found evidence zat evolutionary adaptations of cave-dwelling scorpions in Mexico are reversible as zee creatures move closer to sunlit areas. Writing in zee April issue of the science journal Cladistics, the museum's Lorenzo Prendini, Associate Curator for Invertebrate Zoology, says zat "three more generalized scorpion species living closer to za surface evolved from specialized ancestors living in caves deep below zee surface."

Zis discovery gives new hope to zee families of hams who spend most of zeir lives in dimly-lit basements and attics, and who have developed adaptations to survive in zeese environments, such as extra stores of body fat for sustenance during lengthy periods of confinement and reduced olfactory function.

Zee only potential problem, according to scientists, is zat zeese changes may not be reversible in a single generation. In za scorpions zat were studied, for example, it is believed xat ze reverse evolution has occurred over a period of some 65 million years.

From a cave somewhere in eastern Mexico, zis is Pierre Pullinmyleg reporting for Newsline.

--

Thanks Pierre. You may have made the relatives of ham radio operators feel truly good. Then again, maybe not. (Source: The Pierre Pullinmyleg Foundation for April 1st Reportage')

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73, we thank you for listening and a truly happy April Fools Day 2010 to all.

Amateur Radio Newsline(tm) is Copyright 2010. All rights reserved.

There are lots of good straight keys out there. I've used a WW2 surplus J-37 since before I became a Novice in 1967. For my first 7 years as a ham it was the only key I had.

> He claimed a straight key is not much
> good for anything over 15 wpm. Yikes!

I can do more than 20 wpm on one, even today. That's about top speed for most people.

What a straight key did for me was to help me learn timing. When I got a bug in 1974 it was an easy transition.

> Am I unnecessarily knocking myself out trying to
> learn code at Just
> Learn Code's default 20wpm?
> Dropping down to 15wpm sure would speed
> up the learning curve.

Most people learn best using a combination of the Koch and Farnsworth methods.

Koch is studying two letters until you know them 90-95%, adding a third, studying those three until you know them, adding a fourth, etc.

Farnsworth is having the code sent with the characters fast but exaggerated spaces between letters so you have more reaction time - then reducing the exaggerated spaces.

> If I want to eventually
> make 20wpm and faster,
> would I be better off with a less
> expensive straight key in the
> beginning and later investing
> the money in a quality bug?

Yes. A decent straight key need not cost the earth.

> I want
> to go bug before paddles and keyers.

Then you need to get really good on a straight key (IMHO) because a bug is not as forgiving as an electronic keyer.

> I guess the bottom line is, do I
> want to graduate to a bug as soon as possible
> and maybe lower my
> initial goals for a straight key. IOW, just get on the air? ;)

Yes.

Speed is not the only Morse Code skill, in fact it's not even the most important.

> Any advice is appreciated.

Here are 12 steps to learning Morse Code:

1) Realize that Morse Code is a whole set of skills and they take a while to learn. They cannot be learned by reading a book, watching a video, or participating in online forums. They can only be learned by doing.

2) Set up a place to study code. A good solid desk or table with no distractions, lots of room to write, good lighting, good chair. Source(s) of code (computer, HF receiver, tapes, etc.), key and oscillator. Headphones are a good idea. I recommend starting out with a straight key. It needs a good solid base and needs to be adjusted properly.

3) Stay away from gimmicks like CodeQuick. Stay away from printed charts with dots and dashes on them. Morse Code is sounds, not printing on a chart or little phrases. Learning to receive consists of nothing more than learning to associate a certain sound pattern with a certain letter or number. There are only about 41 of them to learn.

4) Set aside at least a half-hour EVERY DAY for code practice. Can be a couple of ten- or fifteen minute sessions, but they should add up to at least a half hour every day. That means every single day, not just weekends, holidays, etc. If you can do more than a half-hour some days, great! Do it! But more on one day does not give you an excuse for the next day.

5) If you can enlist a buddy to learn the code with, or find a class, do it! But do NOT use the class or the buddy as an excuse to miss practice or slow down your learning.

6) Download and read "The Art And Skill of Radiotelegraphy". It's free and available from several websites. Search out other code-oriented websites, articles, etc. and read what they have to say. But always remember they're not a substitute for practice.

7) Practice both sending and receiving each and every day. A few minutes sending is plenty, most of the time should be spent receiving, but the two help each other. Practice receiving by writing it down. Copying "in your head" comes later. I find a pencil and block printing works best for me.

8) A combination of the Koch method and Farnsworth spacing is probably optimum for most people. Read up on them, understand and use them � but remember they are tools, not magic.

9) Discontinue ANYTHING that impairs your ability to concentrate, focus, and learn new stuff. Only doctor-prescribed medications are exempt from this rule. Eat right, get enough sleep and enough physical exercise.

10) Put away your microphones, stay off the voice radios - all of them. Besides the automated code generators, listen to hams actually using code on the air. Copy down what they send. Learn how hams actually use code. When you get to the point where you can send and receive code, even slowly, get on the air and start making QSOs. Remember that you are learning code to be an operator, not pass a test, and that means you need the whole skill set..

11) If your HF rig doesn't have a sharp filter (400-500 Hz), get one and install it. Read the manual about how to use the rig on CW. Best operation usually requires turning off the AGC, turning the RF gain down and the AF gain up. The S-meter and AGC won't work under those conditions but that's no big loss; they�re not essentials.

12) Keep at it. There may be times when it seems as if you are making no progress, and times when you make rapid progress. What matters is that you keep practicing every day.

A bit of work, but well worth it IMHO, because all those steps make learning the code easier. And the work is trivial compared to what you can do with the skills once they're learned.

First, I recommend the Farnsworth method. In Farnsworth, the individual characters are sent at high speed but are spaced out to slow down the overall speed. I learned with the characters being sent at 28 WPM but the overall speed at 15 WPM. That way, I learned to recognize the characters at 26 and was able to speed up without difficulty.

Regardless of the method you use, you are to be congratulated for committing to learn the code at a decent speed.

Listen to code on the air in addition to your practice. There's lots of CW on 40. Don't worry if it's too fast for you -- listen and copy, even though you may get only 1 out of 5 characters -- it'll come to you.

Don't get too cranked up about speed. I can copy around 26 WPM but most of my CW is ragchewing on 40 at 18 WPM; rarely up to 20. In fact, I recall reading somewhere recently that most CW operation is around 18 WPM.

I use a keyer but from time to time switch to my straight key. I can rattle off 20 WPM on a straight key and may be able to go higher than that. I have never heard that 15 WPM was about all you can get out of a straight key.

Listen on 40 -- at the low end you'll find DX and speed demons. Above about 7030 you'll find normal people who work between 15 and 20 WPM.

If you really want to operate CW, you'll want a keyer with paddle, and, a straight key.

The bug is a fine device, lots of people still use them, but a bug is difficult to adjust and it has a steep learning curve. Get a straight key and learn the code. That way, you are learning only one thing at a time -- the code -- then, you can switch to a bug later on if you really want to.

Another option is to get a keyer that has built-in code practice. The better keyers will have practice routines that allow you to set the character speed and the overall speed. You can then use the keyer after you get on the air.

For many years, the old military J-38 was pretty much the standard straight key. If you can find one, go for it.
http://k6ix.net/J38Keys.html

Check out the Bencher RJ-1.
http://www.morsex.com/bencher/index.htm

The Nye Classic Oval Speed-X is a fine key. It's a copy of the J-38.
http://www.morsex.com/nye/index.htm

Friend of mine has one of these and loves it:
http://www.kent-engineers.com/HANDkeyINFO.htm

Some folks swear by the Russian Cherkassy keys. Note this guy's comment that he sends 25 WPM on a Cherkassy
http://www.aa5tb.com/keys.html

Whatever key you get, you'll want to mount it on a thin piece of something -- wood, plexiglas, etc. I have a Nye Classic Oval that I mounted on a 10-inch x 10-inch piece of plexiglass -- mount the key along the center of one edge so your wrist and forearm are resting on the plexiglas when you are sending.

If you look at the photos of the J-38 you'll see that the key has a small base. When you press down on the key, it wants to tip up --

that's why you want to mount it on a long base so the key remains stable.

Go to this website and scroll down to the photos of the J-37 -- note the long base that extends beyond the knob -- this keeps the key from tipping toward you when you are really pounding brass.
http://www.k5prt.com/equipment_keys.html

Here's one guy's collection:
http://sites.google.com/site/wb9lpu/straightkeynight

I recommend the Nye Oval Speed-X -- order it with the "Navy knob."

This one? http://vibroplex.com/know_code.html

I own the Standard version and I haven't had any issues with it. What exactly were the faults with this?

> He claimed a straight key is not much good for anything over
> 15 wpm.

Well, yeah, although there are people that can do quite well with a straight key at more than 20 wpm.

> If I want to eventually make 20wpm and faster, would I be

> and later investing the money in a quality bug?

My opinion: Learn to send proficiently and accurately with a hand key first. There's a learning curve for a bug that takes a bit of getting used to even with an already good fist.

By the way, you can use a bug as a straight key, using just the "dash" motion. It's called a side swiper at that point.

> I guess the bottom line is, do I want to graduate to a bug as
> soon as possible and maybe lower my initial goals for a
> straight key. IOW, just get on the air? ;)

As I mentioned above, you can start with a bug and use it in the side swiper mode, but you'll have to force yourself to avoid the temptation tp try using in the semi-automatic mode until you gain proficiency at using it as a straight key at lower speeds.

A lot of what you're asking is really personal preference.

I don't know that I'd say a straight key is worthless beyond 15wpm.
But IMHO it gets fatiuging (sp) pretty quickly for long operating
sessions at *any* speed. IMHO a bug is interesting, fun to use for
nostalgia's sake, just like making QSOs with an old tube-based radio.
But for work where the point is to communicate, IMHO a solid-state rig
-- and a paddle/keyer -- is the way to go.

But again, there's a LOT of personal preference in that paragraph.

Nobody's answer is absolutely correct.

I would not limit one's CW receive training speed based on what you can send. There's absolutely nothing wrong with being able to receive faster than you can send. (certainly much less of a problem than the other way around!) Absolutely, I would listen to the individual letters at 20wpm from the beginning. You *can't* think "dot, dash, dot, OK, that's "R"" at that speed -- you have to immediately associate that sound with a letter -- and that'll get you past the "10wpm hump". You'll also start hearing some of the shorter -- and more common -- words as a single sound. Words like "and" and "the" etc...

I think I'd start with a decent paddle and keyer. Good paddles are, I'm afraid, not cheap. (decent keyers are, since you can make one from a simple PIC chip & some fairly simple software)

When I learned the code, back in high school in the 60's, my "elmer" made a great suggestion.

When you're out and about, when you see a street sign or a billboard, translate that into code (preferably "in your head" so as not to attract undue attention). This was highly effective for me; it helped to develop both sending and listening skills. I still find myself doing this from time to time, and I still enjoy working CW.

When I was studying for my Novice we had a club member who was military trained.. We also had a military surplus code practice set

This device used paper tape, you could vary the speed with which the tape was pulled past a light sensor.. It also had a key input

Now if you pressed the key you got one tone, if the ink strip did the "Pressing" you got another tone and if you pressed the key at the precise moment the ink strip keyed the unit you got a 3rd tone (or at any time when the ink was keying it)

This guy was sending in step with the tape

There was only one tone (Indicating he was in perfect lock-step with the tape and that he was sending "Machine perfect" code)

It was pulling at 30 WPM

NB-

My favorite straight key is a WWII surplus J-38, mounted on a more stable base.

The Model J-37 is the same key without a shorting switch. This may be a better choice, because an accidentally shorted key can be a pain to troubleshoot!

When I took my Extra code test at an FCC office, there was only a straight key available for sending 20 WPM. If it is adjusted for the right amount of "bounce", you should be able to manage 20 or 25 WPM.

I waited until I had the Extra class license, before trying any kind of keyer. The one I have was built from a QST article, "The WB4VVF Accukeyer". It was fun to build and works with an "iambic" paddle.

The Accukeyer is somewhat less tiring to use than a straight key when sending at higher speeds. I prefer it to the keyers built into many modern transceivers, because of its automatic character spacing feature. It takes a bit of coordination to use!

They're similar, but not the same key. Both are good choices IMHO.

Here are links to pictures so you can recognize them:

J-37 (sometimes called "J-41" when mounted on its knee-clamp base):

http://farm3.static.flickr.com/2257/1809667974_a553a9acf4.jpg

J-38:

http://www.hamradiocenter.biz/photos/preowned/j-38.jpg

Note that the J-37 has a plastic base and painted-steel lever, while the J-38 is almost all metal.

Morse Code lore: The shorting switch on keys was not originally intended as a tune-up aid.

In the wire-telegraph days, many line circuits were left normally closed when not in use. That way, any break in the line would be detected. The shorting switch was used to close the line when *not* sending.

In radio use, it could be used for tuneup, of course. Also, when a ship was in grave distress and the radio operator was abandoning ship, the shorting switch would be closed so that the transmitter would stay on the air as long as possible.

Back in the dauys of ships having to carry radio operator, the requirement here in Canada was 25 wpm for a commercial operaators license. You had to take the test using a straight key not even bugs were allowed for the test. If memory serves I used a SpeedX hand key to pass the test. There were also some very nice German and English had keys around, left over from WWII that you could use and get upwards of 30 wpm from if you had the skills. The speed recprd holder is W9YZE(SK) at 35 wpm. I believ it is still recorded in the Guinness Book of Records.

See:

Jim-

These keys were provided by several different makers. If you find a J-37 and a J-38 made by same company, there is a chance they are identical except the switch-related hardware is missing from the J-37.

That may not be true for all makers, but it was in one case I'm familiar

with. It appeared that the switch hardware could be transferred from
the J-38 to the J-37 without any modifications.

Hmmm.

After reading all the replies on this thread, I'm tempted to ask:

"Don't you people know that CW is dead?"

While you prepare your answers, I'm off to work the low end of 40.

:-)

Thank you all for the great replies to my query. I couldn't ask for a better cross section of opinions and depth of experience. Your replies really made me rethink my options.

See my new semi-related post! ;)

OK all, you've made me do some serious thinking about keys vs bugs/paddles and I think I'll just settle for a good hand key and learn what needs to be learned and worry about the other stuff later. But wait! ....which is better? European style keying with the typical straight bar or the traditional US style keying with the bent-down bar? The more I read, the more confusing it becomes.

First, let me say I'm a bit prone to RSI. Not accute, but I've suffered it often enough to realize it's a potential problem for me. I've read where the US method of the arm resting on the table (bent arm key) is claimed to be more prone to this type of problem (glass arm) than the European style of keying, which I've more than once seen referred to as "speed keying" and uses the straight key arm and has the user's arm off the table. What say you long-time straight key vets?

While I have no problem finding Euro-style keys, I've not found much on the Euro style keying method. Anyone have good references or experiences on this subject. BTW, I find some high-end keys are cheaper without the bent key arm. That, and I've suffered enough RSI in this lifetime. Thank you in advance. ;)

 Fred McKenzie <fmmck@aol.com> wrote:

> It appeared that the switch hardware could be transferred from
> the J-38 to the J-37 without any modifications.

Jim-

My memory from the 1950s is a little dim. I can't find my original J-38, but did find several other keys I've picked up over the years.

There is one J-38 like my original one from the 50s. There are two J-37 keys: one like you described and one like the J-38. One of the J-37s is mounted on a knee-clamp!

The J-37 that is like the J-38, has the switch part attached to the hot contact. However the place where the switch lever would bolt to the base, is missing. I think this was the case I remembered from years

ago. Half of the switch is there, but there is no provision to attach
the lever.

NB-

As you asked in your original post, you need to find a key. Any key.
And get on the air! Your code speed will improve more rapidly when you
are forced to copy in a way you can't when listening to a recording.

It may not matter which style of key you get, as far as RSI is
concerned. You can operate either kind without resting your hand on the
desk.

One feature you may like is a Navy knob. The Navy knob has a round disk
under the knob. You can make one by drilling a hole in a poker chip,
and mounting it under the original knob.

I am a retired Police Dispatcher.. One day one of my dispatchees had a radio problem (Bad Mic cable) and could not talk to me.

Since we were both licensed hams, and both knew it. We managed to get the necessary traffic passed and his rig scheduled for a very quick visit with the Radio Shop.. No problem.

So, CW may be dead... But the number of carriers I find on the band suggests... NOT.

Though I do admit I now know why folks were saying "GOD IS DEAD" some years ago... But that is a topic for a different NG.

(NOTE: This statement does not comment on anything other than my knowledge of that subject.. It is thus, NOT open for discussion)

At about 7:45 Thursday morning, April 1, Windstream Communications suffered a major landline telephone switch failure. The result was a loss of landline telephone service at least 12 counties and 36,000 customers in Nebraska. There was also spotty loss of cell phone service where cell sites were interconnected by Windstream. Emergency services, including 911 centers, in Lincoln and several other communities were left without landline telephone communications.

The Lancaster County Emergency Management Director, Doug Ahlberg, activated the amateur radio "Y2K" plan. This plan places hams at prominent intersections and, if need be, public emergency service locations throughout the city. Since there was, in effect, no 911 service in the city, the Lincoln-Lancaster Emergency Operations Center was activated and, under the direction of the ARRL Lancaster County Emergency Coordinator, Reynolds Davis, K�GND, hams were assigned to the EOC and 15 major intersections around the city. Emergency bulletins on television and radio stations carried information about where hams were stationed. Hams could help citizens obtain emergency services. They also watched out for vehicle accidents and obstructions to traffic.

This is the fourth time that the "Y2K" plan, originally established in anticipation of the loss of communications at the end of the last century, has been used. Earlier activations were due to localized loss of communications at dispatch centers.

By the time telephone service was restored, at 11:20 pm Thursday, 62 amateur radio operators had devoted a good part of the day to ensure the safety of the people of Lincoln. Their calls were: W�ADI, K�AIZ, N�AZN, N7AZN, W�BCL, KD�BCT, KD�BSA, KC�CDQ, N�CRL, KD�DEU, N�DEX, KD�DIU, N�DIZ, KB�DNP, KD�DVR, W�EMA, K�EPP, W�ERT, KD�EYM, W�EZ, KC�FDL, N�FYE, K�GND, KA�GON, KD�HYM, KD�HZM, KD7ITK, K�JIC, KI6JOJ, K�JSL, KE�JT, KB�KA, KC�KIE, AC�LN, N�LNK, N�LWL, NG�M, KD6MXE, K�NEB, KC�OZE, WA�QYI, N�QYM, N�RHL, WB�RJJ, KN�RKY, KC�RSU, KB�RZP, KB�SND, KC�SVX, KE�TAS, N�UJR, N�UXW, W�VDM, KC�VNJ, KC�VRL, W�WKP, KB�WZG, N�XLT, N�XY, KC�ZBB, KC�ZBD and N�ZXR.

There was significant press coverage with photographs, interviews, and video clips of hams "on duty" presented to the public. The public was reminded, once again, that when all else fails, there is ham radio.

Congratulations to everyone for a job well done.

Fifty years ago, My buddy and I (in jr high, then) were going to become hams. Short story, my family moved, my new surroundings opened up new vistas and I put all my energies into becoming a rock musician. While my buddy went on to get his license, I did not. I now want to. As for the cw thing, I'm a romantic and from a different time.

>> I was gonna buy a Vibroplex Know Code key, but the reviews
>> are less than heartening.

> I own the Standard version and I haven't had any issues with
> it. What exactly were the faults with this?

eHam had one review where the owner described the key as having a "soft" feel:

"The only thing I didn't like is the feel of the contacts. It has a 'soft' feel due to the upper contact being mounted to a tab, instead of directly to the lever. The tab bends as contact is made, acting like a leaf spring. I suspect this is the same situation on all versions of the Vibroplex straight key.

The solution was simple. I placed a #4 flat washer between the contact tab and the lever, beside the existing screw and washer. It was necessary to remove the lever assembly to accomplish this. The new washer is held in place by the top protrusion of the upper contact. It fills the gap between the tab and the lever and prevents any spring action from occuring in the contact tab, providing a more typical feel to the key's action." --N0NV

I don't want a "soft" feel and think spending almost $200 on a key I may need to modify is not in my best interests.

It's been pointed out that Vibroplex has a new owner and perhaps some design and/or quality control issues will improve. We'll see.

According to a recent story on National Public Radio (NPR), the Internet generation is re-discovering an older communications medium. Reporter Matt Sepic said "Nearly 700,000 Americans have ham radio licenses, up 60 percent from 1981".

Here's the link:

Not at all a surprise. The issue I've always had with comparing Ham radio to the internet is that it's a real apples/oranges thing. For some strange reason, the internet is/was thought of as some sort of high tech wonderland. I've been there for a long time, and high tech the internet isn't. It's a matter of software and "which option do I choose". While still a great medium, the internet is at least for me, a tool, and doesn't hold a lot of interest, beyond what I need to do my work and play with.

Whereas radio on the other hand, is what one might call a live medium. It isn't automatic, even the person who uses only store bought gear has to learn how to use it. And the settings need to be changed all the time. Oddly enough some of the detractors of Ham radio liked to point out how you could contact anyone in the world via internet. Yup indeed. With Ham radio, you need to know the right times, right band and right frequency, and sometimes have a bit of luck to contact another ham across the world. But doing it without any structure between you and the other guy or gal is the hook. I'll never forget the first time I QSO'ed with a Ham in Australia on 10 meters. It would be hard to feel the same about a phone call. Or a chat room.

I did have to chuckle at the part where the article notes that die hard Hams have to agree that Amateur Radio will never be a mainstream hobby. It's true, and I wouldn't have it any other way.

Hi Notbob,

I think maybe Jeff's comment was toward what does or doesn't make a real Ham. The great thing about Ham radio is that there are so many facets to the hobby. So many in fact that it isn't possible to determine one particular part's worth over another. Morse code use is one of the coolest parts of the hobby, in which very unsophisticated and low power equipment can in the hands of a skilled practitioner of the art, be used to communicate around the world. Doesn't get much better than that. Your comment about the Romantic in you is spot on. I love the old equipment, one of my borrowed sayings is that "I love the smell of a tube rig in the morning.
Hopefully however, in time you will come to understand that it isn't the mode that makes a real ham - it's the person behind the key, or the mic, or the computer.
Now go get that license, I'll be listening for ya!

The thing is, for most people, it's not about the technology.

With the internet, cell phones, PCs, etc., what's interesting is the content more than how it gets to you. Most people *expect* it all to work perfectly 100% of the time on the first try, automatically. It's the email/phone call/message/website that's the important part; the technology is just how you get to it.

But ham radio is about "radio for its own sake" and is all about the journey rather than the destination. It's the difference between riding in an airliner from, say, New York to San Francisco and piloting your own airplane over the same route. Sure, in both cases you "flew", but the journey was completely different.

If you send an email to Australia, you *expect* it to get there in a few minutes at most. But working Australia on the air is a completely different thing.

Some people don't get this - in fact, most people don't get it. When someone's first question about ham radio is "what do you talk about?", it's an indication that they don't get it. That's not a bad thing, just a different view.

I agree.

If everyone got a ham license and got on the air, there wouldn't be
enough spectrum for all of us.

No argument there. I do think that as the internet has matured a lot of the more tech minded among us have done a sort of "Okay, time to move on".

Interestingly, the net and computers have helped fuel this. In my own case, I got into Ham radio as a sort of way to get away from the computers. I'd seen them used at my first field day as logging machines, but that was it. Then after getting my license, I found out about the sound card modes, the DX spotting nets, and all the other great stuff available to us as Hams. So in trying to get a hobby away from the computers led me to using them even more. That's okay though, as noted in another thread, I think there are so many different things to experiment with that it's all good.

Now back to the internet, Ham radio has a pretty big presence there, and a lot of it is not commercial, it's some person who made say a loop antenna, is proud of it, and want's to tell the world about it. Maybe it's a person who built their own little QRP rig and a key that fits in an Altoids tin. So they put up a web page. Well, along comes someone else, maybe just browsing around, and hits his site. The curious and technical minded person might just get hooked around that time. Then they read about digital modes, soon the are hooked.

The interesting thing for me is that I have heard many people lament how the Internet was going to kill Amateur Radio. I firmly believe the exact opposite is true. The internet will be one of the best things to happen to Ham radio when all is said and done.

> But ham radio is about "radio for its own sake" and is all about the
> journey rather than the destination.

Oh yeah, I Enjoy the ride as much or more that the destination. I had some tree work done this week. Gave me an excuse to take down my vertical antenna. But Now I'm having fun reinstalling it. I'm making it more professional looking install, and putting in more radials, which has been an ongoing project. I put them in until the knees and back start barking at me, then tune and use it. Then do it again some time later.

Point is, Doing the install, tuning and all are as much fun to me as getting on the air and using it. I'm up to around 20 radials now. I've also found that the number of radials does indeed make a difference. Learned something and had fun doing it. Gunny says "Booyeah!

> Some people don't get this - in fact, most people don't get it. When
> someone's first question about ham radio is "what do you talk about?",

I had to smile here. Once someone asked me what Hams talked about on the air. I said "Nothing". "What do you mean?", they asked. I said we talk about very general stuff, but mostly it's talk about nothing.
"You mean like That show with Jerry Seinfeld?"
I figured I needed to change my approach.

```

Some historic perspective on growth in US Amateur Radio:

Numbers of US population, the number of US hams, growth over the previous decade and ratio of hams to population at the start of each decade from 1930. Thanks to W5ESE for the pre-2010 info. (# of hams is of individuals and does not include grace-period licenses)

```
Year   Population     Hams     Growth       Ratio
```

1930	123,202,624	19,000		6,484 to 1
1940	132,164,569	56,000	+194%	2,361 to 1
1950	151,325,798	87,000	+55%	1,739 to 1
1960	179,323,175	230,000	+164%	780 to 1
1970	203,211,926	263,918	+15%	770 to 1
1980	226,545,805	393,353	+49%	576 to 1
1990	248,709,873	502,677	+28%	495 to 1
2000	281,421,906	682,240	+36%	412 to 1
2010	309,026,303	688,326	+4.5%	449 to 1

(hopefully that will stay formatted)

Note that the decade of greatest percentage growth was the 1930s.

Until 2000, the decade of least percentage growth was the 1960s.

73 de Jim, N2EY

==> BPL: CITY OF MANASSAS TO END BPL SERVICE

Once touted as "the most successful BPL deployment in the nation," the City of Manassas has decided to get out of the BPL business, once and for all. At a Special Meeting on Monday, April 5, the Manassas City Council -- acting on a recommendation from the Manassas Utilities Commission -- unanimously voted to discontinue Broadband over Powerline (BPL <http://www.arrl.org/tis/info/HTML/plc/>) Internet service as of July 1, 2010 to the approximately 520 residents and businesses who currently subscribe to the service; these customers were told that they have three months to find a new Internet service provider.

According to Manassas City Clerk Andrea Madden, there was no discussion on the resolution to discontinue service and the motion was passed "without incident."

With the motion made by Councilman Jonathan Way and seconded by Mark Wolfe, the City Council cited three reasons for discontinuing BPL service: a declining customer base, an annual income deficit of almost $166,000 from providing Internet service, and a determination that AMI <http://en.wikipedia.org/wiki/Advanced_Metering_Infrastructure> [Advanced Metering Infrastructure] platforms don't require BPL. Way and Wolfe favored shutting down the BPL system in November 2009 <http://www.arrl.org/news/stories/2009/11/19/11206/?nc=1>, the last time this matter was brought to the Council's attention. "The City needs to get out of BPL forthwith," Way said back in 2009. "It's not a good product. The whole business is not financially sound and it never has been."

Manassas residents pay $24.95 each month to receive Internet service via BPL. In November 2009, the Utility Commission showed the Council that little more than 500 residents and 46 businesses currently subscribed to the service, which since 2008, has been run by the City <http://www.arrl.org/news/stories/2008/10/16/10391/>. "It's costing a little more to maintain the system than we projected in the budget," Manassas Director of Utilities Michael Moon told the Council. "The original projections were that the customer base would be double this." In September 2008, the Manassas City Council voted to assume control of the BPL service from COMTek <http://www.comtekbroadband.com/>, the private company that served (back then) approximately 675 residents.

In January 2009, there were 637 residential and 51 commercial BPL subscribers in Manassas. In February 2010, those numbers had shrunk to 457 residential and 50 commercial subscribers. The Utilities Commission said that the total revenue brought in by BPL for FY2010 was almost $186,000, but the expense of keeping up the City-owned system was costing the ratepayers a little more than $351,000, resulting in a net loss of almost $166,000.

"In October 2003, the Manassas City Council was told that it could expect as much as $4.5 million in revenue from awarding a 10 year BPL franchise," said ARRL Chief Executive Officer David Sumner, K1ZZ. "Instead, six months later, BPL had turned into a money pit for the City of Manassas. Anyone thinking of investing in BPL would do well to learn from the Manassas experience."

In November 2009, Manassas' Assistant Utilities Director (Electric) Gregg Paulson told the ARRL that they had "every intention of putting BPL Internet service in the budget and the Council can decide its fate as they work through the budget process." Paulson also said that while Internet service to consumers would "probably" be the only thing that would be cut if the Council decided to forego BPL, he left the door open as to using the BPL infrastructure for other purposes: "We still own the BPL network, but we may or may not use this network for utility monitoring or other AMI purposes."

But according to the resolution passed by the Council, the Manassas Utilities Department will not be using BPL for AMI, but instead will use "a combination of fiber and wireless technology exclusive of the BPL." According to the Agenda Statement for the Special Meeting, the BPL equipment will be removed from the system and "inquiries will be made regarding the salvage value."

Sumner said that the ARRL's concern was not with the business plan -- that he termed "obviously flawed" -- but with "the interference to licensed radio services -- and in particular the Amateur Radio Service -- inevitably caused by putting radio frequency energy on unshielded, unbalanced conductors. Manassas was touted as 'the most successful BPL deployment in the nation' when FCC Chairman Michael Powell visited the site with much fanfare -- and, the ARRL maintains, in violation of the FCC's own rules -- on the eve of the FCC's vote to adopt inadequate protection for licensed radio services against interference from BPL systems. The taxpayers and ratepayers of Manassas are not the only ones who benefit from the end of this ill-considered foray into BPL. Radio amateurs in the Manassas area have good reason to celebrate, for they have spent countless hours documenting the widespread interference caused by the system."

BPL technology uses the electricity grid in a city and the wiring in individual homes to provide direct "plug in" broadband access through electricity sockets, rather than over phone or cable TV lines. Because BPL wiring is physically large, is often overhead and extends across entire communities, these systems pose a significant interference potential to over-the-air radio services, including Amateur Radio.

==> FCC NEWS: ARRL RESPONDS TO FCC'S NPRM CALLING FOR NEW RULES ON VANITY AND CLUB CALL SIGNS

In November 2009, the FCC issued a Notice of Proposed Rule Making (NPRM) -- WT Docket No 09-209 -- seeking to amend the Commission's Amateur Radio Service rules in an attempt to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations. In March, the ARRL submitted comments and additional proposals to the FCC to update the Amateur Service's call sign assignment system and provide for continued growth of the Amateur Radio Service, as well as enhance the pride and satisfaction of licensees in their personal achievements in the radio art. The ARRL's positions were developed by the Executive Committee at its March 13 meeting. Read more here <http://www.arrl.org/news/stories/2010/04/07/11423/?nc=1>.

==> FCC NEWS: ARRL FILES COMMENTS IN RESPONSE TO HOSPITAL ASSOCIATION SEEKING BLANKET WAIVER REQUEST FOR AMATEUR RADIO DRILLS

In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- asking whether the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored."

Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." On April 2, the ARRL filed comments regarding the blanket waiver request. Read more here <http://www.arrl.org/news/stories/2010/04/07/11425/?nc=1>.

==> FCC NEWS: ARRL FILES PETITION FOR RECONSIDERATION OVER WAIVER FOR NON-AMATEUR DEVICE IN 70 CM BAND

In January 2008, a company called ReconRobotics filed a request with the FCC for a waiver of Part 90 of the Commission's Rules with respect to the Recon Scout -- a remote-controlled, maneuverable surveillance robot designed for use in areas that may be too hazardous for human entry. A waiver is required to permit licensing of the Recon Scout because the device operates in the 430-448 MHz band, which is allocated to the Federal Government Radiolocation service on a primary basis, as well as the Amateur Radio Service and certain non-federal radiolocation systems on a secondary basis. More than two years later, the FCC granted the waiver request in the form of an Order (WP Docket No 08-63), subject to certain conditions. The ARRL had opposed the waiver on the grounds that the device has a significant potential to interfere with amateur stations and that the company is simply trying to avoid redesigning for the domestic market a device that was designed for military use overseas, and as such, filed a Petition of Reconsideration with the FCC in late March. Read more here <http://www.arrl.org/news/stories/2010/04/06/11422/?nc=1>.

==> PUBLIC SERVICE: TELEPHONE OUTAGE IN NEBRASKA WAS NO APRIL FOOL'S JOKE

Early on the morning of April 1, almost 40,000 people in Southeastern Nebraska -- including the City of Lincoln's government, business and emergency centers -- found that they had no landline telephone service, as well as spotty cell phone coverage, thanks to an equipment malfunction at a Lincoln switching facility owned by Windstream Communications. According to news reports, residents of 12 counties were unable to contact 911 and dispatch centers had rely on other communications services -- including Amateur Radio. Read more here <http://www.arrl.org/news/stories/2010/04/05/11421/?nc=1>.

==> ON THE AIR: THE FIRST ROOKIE ROUNDUP -- COMING APRIL 18!

The ARRL's newest contest -- the Rookie Roundup -- is getting a lot of buzz among newly-licensed amateurs. Designed as a modern equivalent to the ARRL Novice Roundup from a few decades ago, this new incarnation combines a competitive event with some on-the-air training. The first Rookie Roundup is scheduled for April 18 and will be an SSB contest. The Rookie Roundup is six hours of fun on a Sunday afternoon that is designed to give new hams a chance to get their feet wet on HF and 6 meters. Old-timers are encouraged to get on the air and work the Rookies, just as in they did in the Novice Roundups. The six hour event -- from 1800 UTC-2359 UTC -- will be held on the third Sunday of April, August, and December. SSB, RTTY, and CW will be featured in the different months. Read more here <http://www.arrl.org/news/stories/2010/04/08/11426/?nc=1>.

==> COMING UP IN QST : CHECK OUT WHAT'S IN THE MAY ISSUE

The May issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting -- including a breakdown of the Second ARRL Homebrew Challenge -- the upcoming issue of QST has something for just about everyone. You'll find an abundance of technical and general interest articles, as well as monthly columns such as Happenings, How's DX, Hamspeak, Vintage Radio and more. Click here <http://www.arrl.org/news/stories/2010/04/07/11424/?nc=1> to discover what's in store for you in the May issue of QST, the official journal of the ARRL.

==> ON THE AIR: MOONBOUNCE FOR EVERYONE -- COURTESY OF THE ARECIBO RADIO TELESCOPE!

Sending Amateur Radio signals to the Moon and back has never been easy. After roundtrip journeys of nearly half a million miles, even the most powerful signals generated by hams are exquisitely weak on arrival. Because of the equipment and expertise necessary for successful "moonbounce" operating, this facet of Amateur Radio generally has been confined to a small audience. But for three days in April even hams with very modest stations will have the opportunity to experience the thrill of moonbounce, thanks to the giant radio telescope at the Arecibo Observatory in Puerto Rico. Read more here <http://www.arrl.org/news/stories/2010/04/07/11420/?nc=1>.

==> SOLAR UPDATE

Tad "Pay no worship to the garish Sun <http://shakespeare.mit.edu/romeo_juliet/romeo_juliet.3.2.html>" Cook, K7RA, reports: A strong solar wind blasted us on Monday and Tuesday, causing the biggest geomagnetic storm since 2006. On those days, the mid-latitude A index was 28 and 22 and the planetary A index was 49 and 46. A search for similar numbers over the past few years yields nothing. In 2009, the highest planetary A index was 19 on August 30, and in 2008 it was 37 on October 11. This is indicative of how quiet space weather has become in the past few years. In 2007, the planetary

A index reached 30 on April 1, and we have to go back to 2006 to find any geomagnetic activity as strong, when the planetary A index reached 63 and 104 on December 14-15. It seems counter-intuitive, but average daily sunspot numbers rose by 3.5 points this week to 32.4, while the average daily solar flux dropped more than 7 points to 77.8. NOAA and USAF predict solar flux at 76 for April 8-9, 75 on April 10-14 and a jump to 80 on April 15. The same forecast predicts planetary A index settling down to 15, 8, and 5 for April 8-10. For some reason, despite the high geomagnetic activity, no reports have come in from 6 meter operators about auroral propagation. Perhaps we will hear from them before Friday when this week's bulletin is released. Look for more information on the ARRL Web site on Friday, April 9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/propagation-of-rf-signals>. This week's "Tad Cookism" brought to you by William Shakespeare's Romeo and Juliet <http://shakespeare.mit.edu/romeo_juliet/romeo_juliet.3.2.html> (Act III, Scene 2).

==> ARRL PUBLICATIONS: NEW EDITIONS OF THE ARRL HAM RADIO LICENSE MANUAL, TECH Q&A NOW AVAILABLE

Discover all the excitement of Amateur Radio when you get your Technician license -- your ticket to the unique mix of fun, public service, technology and experimenting with electronics. The ARRL Ham Radio License Manual and ARRL's Tech Q&A will guide you as you get started in Amateur Radio, helping you select your equipment, set up your first station and make your first (of many!) contacts. These manuals -- designed for Technician exams given after July 1, 2010 -- contain all of the information you need to study for and pass the 35 exam questions derived from the new

Technician class (Element 2) question pool. The questions in the pool provide for the new Technician licensee to be able to establish his or her station and operate it legally, courteously and safely. The new Technician pool contains approximately 400 questions, from which 35 are selected for an Element 2 examination; the exam will contain graphics and diagrams. When you use The ARRL Ham Radio License Manual and the ARRL's Tech Q&A to study for your first license exam, you'll be on the air in no time! Every page presents information you will need to pass the exam and become an effective operator, such as radio and electronics fundamentals, operating station equipment, communicating with other hams, licensing regulations, operating regulations and radio safety. Read more here <http://www.arrl.org/news/stories/2010/04/05/11419/?nc=1>.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=6LsUNXPtObs> This week, the Montana QSO Party is April 9-11. The Japan International DX Contest, the QCWA Spring QSO and the Georgia QSO Party are April 10-11. Next week, the TARA Skirmish Digital Prefix Contest, the Holyland DX Contest and the EU Spring Sprint are April 17. The Michigan QSO Party, the Ontario QSO

Party and the YU DX Contest are April 17-18. The Run for the Bacon QRP Contest is April 19. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests>, the ARRL Contest Update <http://www.arrl.org/The-ARRL-Contest-Update> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/special-events>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/courses-training> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/online-courses> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

wi=
dth=3D"199" /><p class=3D"caption">After almost eight years, the City of
Ma=
nassas has voted to discontinue BPL service.</td> </tr> </tbody>
</table><p=
>Once touted as "the most successful BPL deployment in the nation," the
Cit=
y of Manassas has decided to get out of the BPL business, once and for
all.=
 At a Special Meeting on Monday, April 5, the Manassas City Council --
acti=
ng on a recommendation from the Manassas Utilities Commission --
unanimousl=
y voted to discontinue Broadband over Powerline (<a
href=3D"http://www.arrl=
.org/tis/info/HTML/plc/">BPL</a>) Internet service as of July 1, 2010 to
th=
e approximately 520 residents and businesses who currently subscribe to
the=
 service; these customers were told that they have three months to find a
n=
ew Internet service provider.<p>According to Manassas City Clerk Andrea
Mad=
den, there was no discussion on the resolution to discontinue service and
t=
he motion was passed "without incident."<p>With the motion made by
Councilm=
an Jonathan Way and seconded by Mark Wolfe, the City Council cited three
re=
asons for discontinuing BPL service: a declining customer base, an annual
i=
ncome deficit of almost $166,000 from providing Internet service, and a
det=
ermination that <a
href=3D"http://en.wikipedia.org/wiki/Advanced_Metering_I=
nfrastructure">AMI</a> [Advanced Metering Infrastructure] platforms don't
r=
equire BPL. Way and Wolfe favored <a
href=3D"http://www.arrl.org/news/stori=
es/2009/11/19/11206/?nc=3D1">shutting down the BPL system in November
2009<=
/a>, the last time this matter was brought to the Council's attention.
"The=
 City needs to get out of BPL forthwith," Way said back in 2009. "It's not
=
a good product. The whole business is not financially sound and it never
ha=
s been."<p>Manassas residents pay $24.95 each month to receive Internet
ser=
vice via BPL. In November 2009, the Utility Commission showed the Council
t=
hat little more than 500 residents and 46 businesses currently subscribed
t=
o the service, which since 2008, <a
href=3D"http://www.arrl.org/news/storie=
s/2008/10/16/10391/">has been run by the City</a>. "It's costing a little
m=
ore to maintain the system than we projected in the budget," Manassas
Direc=
tor of Utilities Michael Moon told the Council. "The original projections
w=
ere that the customer base would be double this." In September 2008, the
Ma=
nassas City Council voted to assume control of the BPL service from <a
href=
=3D"http://www.comtekbroadband.com/" target=3D"_blank">COMTek</a>, the
priv=
ate company that served (back then) approximately 675 residents.<p>In
Janua=
ry 2009, there were 637 residential and 51 commercial BPL subscribers in
Ma=
nassas. In February 2010, those numbers had shrunk to 457 residential and
5=
0 commercial subscribers. The Utilities Commission said that the total
reve=
nue brought in by BPL for FY2010 was almost $186,000, but the expense of
ke=
eping up the City-owned system was costing the ratepayers a little more
tha=
n $351,000, resulting in a net loss of almost $166,000.<p>"In October
2003,=
 the Manassas City Council was told that it could expect as much as $4.5
mi=
llion in revenue from awarding a 10 year BPL franchise," said ARRL Chief
Ex=
ecutive Officer David Sumner, K1ZZ. "Instead, six months later, BPL had
```

```
tur=
ned into a money pit for the City of Manassas. Anyone thinking of
investing=
 in BPL would do well to learn from the Manassas experience."<table align=
=3D"left" border=3D"1" cellpadding=3D"0" cellspacing=3D"0"
style=3D"margin:=
 7px 10px;" width=3D"227"><tbody><tr><td><img alt=3D"" border=3D"1"
height=
=3D"300" src=3D"http://www3.arrl.org/nl/al/image/BPLpole.JPG"
width=3D"227"=
 /><p class=3D"caption">BPL technology uses the electricity grid in a city
=
and the wiring in individual homes to provide direct "plug in" broadband
ac=
cess through electricity sockets, rather than over phone or cable TV
lines.=
</td> </tr> </tbody> </table><p>In November 2009, Manassas' Assistant
Utili=
ties Director (Electric) Gregg Paulson told the ARRL that they had "every
i=
ntention of putting BPL Internet service in the budget and the Council can
=
decide its fate as they work through the budget process." Paulson also
said=
 that while Internet service to consumers would "probably" be the only
thin=
g that would be cut if the Council decided to forego BPL, he left the door
=
open as to using the BPL infrastructure for other purposes: "We still own
t=
he BPL network, but we may or may not use this network for utility
monitori=
ng or other AMI purposes."<p>But according to the resolution passed by the
=
Council, the Manassas Utilities Department will not be using BPL for AMI,
b=
ut instead will use "a combination of fiber and wireless technology
exclusi=
ve of the BPL." According to the Agenda Statement for the Special Meeting,
=
the BPL equipment will be removed from the system and "inquiries will be
ma=
de regarding the salvage value."<p>Sumner said that the ARRL's concern was
=
not with the business plan -- that he termed "obviously flawed" -- but
with=
 "the interference to licensed radio services -- and in particular the
Amat=
eur Radio Service -- inevitably caused by putting radio frequency energy
on=
 unshielded, unbalanced conductors. Manassas was touted as 'the most
succes=
sful BPL deployment in the nation' when FCC Chairman Michael Powell
```

```
visited=
 the site with much fanfare -- and, the ARRL maintains, in violation of
the=
 FCC's own rules -- on the eve of the FCC's vote to adopt inadequate
protec=
tion for licensed radio services against interference from BPL systems.
The=
 taxpayers and ratepayers of Manassas are not the only ones who benefit
fro=
m the end of this ill-considered foray into BPL. Radio amateurs in the
Mana=
ssas area have good reason to celebrate, for they have spent countless
hour=
s documenting the widespread interference caused by the system."<p>BPL
tech=
nology uses the electricity grid in a city and the wiring in individual
hom=
es to provide direct "plug in" broadband access through electricity
sockets=
, rather than over phone or cable TV lines. Because BPL wiring is
physicall=
y large, is often overhead and extends across entire communities, these
sys=
tems pose a significant interference potential to over-the-air radio
servic=
es, including Amateur Radio.<a name=3D"toc02"></a><div

2010,=
 the American Hospital Association (AHA) filed a request with the FCC for
a=
 blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to
permi=
t hospitals seeking accreditation to use Amateur Radio operators who are
ho=
spital employees to transmit communications on behalf of the hospital as
pa=
rt of emergency preparedness drills." On March 3, the FCC issued a
<i>Publi=
c Notice</i> -- WP Docket 10-54 -- asking whether the Commission "should
gr=
ant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit
am=
ateur operators who are hospital employees to participate in emergency
dril=
ls that are conducted by hospitals for accreditation purposes and that are
=
not government-sponsored."<p>Section 97.113(a)(3) specifically prohibits
am=
ateur stations from transmitting communications "in which the station
licen=
see or control operator has a pecuniary interest, including communications
=
on behalf of an employer." On April 2, the ARRL filed comments regarding
th=
e blanket waiver request. Read more <a

urveillance robot designed for use in areas that may be too hazardous for
h=
uman entry. ReconRobotics was recently granted a waiver by the FCC for the
=
device to operate between 430-448 MHz.</td> </tr> </tbody> </table><p>In
Ja=
nuary 2008, a company called ReconRobotics filed a request with the FCC
for=
 a waiver of Part 90 of the Commission's Rules with respect to the Recon
Sc=
out -- a remote-controlled, maneuverable surveillance robot designed for
us=
e in areas that may be too hazardous for human entry. A waiver is required
=
to permit licensing of the Recon Scout because the device operates in the
4=
30-448 MHz band, which is allocated to the Federal Government
Radiolocation=
 service on a primary basis, as well as the Amateur Radio Service and
certa=
in non-federal radiolocation systems on a secondary basis. More than two
ye=
ars later, the FCC granted the waiver request in the form of an
<i>Order</i=
> (WP Docket No 08-63), subject to certain conditions. The ARRL had
opposed=
 the waiver on the grounds that the device has a significant potential to
i=
nterfere with amateur stations and that the company is simply trying to
avo=
id redesigning for the domestic market a device that was designed for
milit=
ary use overseas, and as such, filed a <i>Petition of Reconsideration</i>
w=
ith the FCC in late March. Read more <a

</table><p>=
Sending Amateur Radio signals to the Moon and back has never been easy.
```

```
Aft=
er roundtrip journeys of nearly half a million miles, even the most
powerfu=
l signals generated by hams are exquisitely weak on arrival. Because of
the=
 equipment and expertise necessary for successful "moonbounce" operating,
t=
his facet of Amateur Radio generally has been confined to a small
audience.=
 But for three days in April even hams with very modest stations will have
=
the opportunity to experience the thrill of moonbounce, thanks to the
giant=
 radio telescope at the Arecibo Observatory in Puerto Rico. Read more <a

href=3D"http://sha=
kespeare.mit.edu/romeo_juliet/romeo_juliet.3.2.html">Pay no worship to the
=
garish Sun</a>" Cook, K7RA, reports: A strong solar wind blasted us on
Mond=
ay and Tuesday, causing the biggest geomagnetic storm since 2006. On those
=
days, the mid-latitude A index was 28 and 22 and the planetary A index was
=
49 and 46. A search for similar numbers over the past few years yields
noth=
ing. In 2009, the highest planetary A index was 19 on August 30, and in
200=
8 it was 37 on October 11. This is indicative of how quiet space weather
ha=
s become in the past few years. In 2007, the planetary A index reached 30
o=
n April 1, and we have to go back to 2006 to find any geomagnetic activity
=
as strong, when the planetary A index reached 63 and 104 on December
```

```
14-15.=
 It seems counter-intuitive, but average daily sunspot numbers rose by 3.5
=
points this week to 32.4, while the average daily solar flux dropped more
t=
han 7 points to 77.8. NOAA and USAF predict solar flux at 76 for April
8-9,=
 75 on April 10-14 and a jump to 80 on April 15. The same forecast
predicts=
 planetary A index settling down to 15, 8, and 5 for April 8-10. For some
r=
eason, despite the high geomagnetic activity, no reports have come in from
=
6 meter operators about auroral propagation. Perhaps we will hear from
them=
 before Friday when this week's bulletin is released. Look for more
informa=
tion on the ARRL Web site on Friday, April 9. For more information
concerni=
ng radio propagation, visit the <a

Amateur Radio Newsline(tm) Report 1704 - April 9 2010

Amateur Radio Newsline report number 1704 with a release date of Friday, April 9th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. 911 service fails in Lincoln Nebraska and its ham radio to the rescue. Also, Southern California hams prove that they can mobilize for an earthquake, a Kentucky radio club wants to recycle old TV towers for emergency communications use and National Public Radio says that ham radio is alive and growing. Find out the details on Amateur Radio Newsline(tm) report number 1704 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: LINCOLN NE 911 OUTAGE BRINGS OUT HAM RADIO Y2K PLAN

Its was no April Fools joke on Thursday, April 1st. Thats when the local telecommunications provider Windstream lost its interconnect ability and phones literally went out in South-Eastern Nebraska. It also brought out a cadre of well trained ham radio operators to fill in until service could be restored. Joe Eisenberg, K0NEB, lives in Lincoln and explains what failed:

--

KONEB: "At about 7:45 a.m. the main switch which controls the Windstream Inter-Exchange switching in Lincoln, Nebraska, and 12 surrounding counties failed, and then the redundant switch failed as well causing phone calls that would go between exchanges to be disrupted as well as all 911 service in the multi-county area to cease to exist. So we hams have been out on location throughout the city of Lincoln and areas of Lancaster County stationed at major intersections in case somebody needs to contact 911."

--

According to the Nebraska Department of Health and Human Services, 911 service was out for all or part of Butler, Seward, Saunders, Clay, Adams, northern Gage, Jefferson, Cass, Saline, Richardson and Fillmore counties, as well as Lancaster county. Responding to the emergency were 68 hams belonging to the Lincoln Amateur Radio Club and Lincoln ARES. They were activated throughout the day to become the emergency communications replacement for the 911 service. It was a callout that Lancaster Country Emergency Coordinator Reynolds Davis, K0GND, says that area hams had spent over a decade preparing for. Preparations that began because of dire predictions News Years Eve 2000:

--

K0GND: "We implemented our Y2K plan which we put together in late 1999 in anticipation of all the doom and gloom people had worried about. Although it was not necessary that night, since then we have implemented it four different times for massive telephone outages."

--

While the predicted computer failures of Y2K never occurred, it did place Lincoln area hams in a unique position to respond to communications emergencies that have occurred over the past decade. So nobody was surprised when the general call for assistance went out this time. Again, Reynolds Davis, K0GND:

--

K0GND: "On Y2K night the newspaper had a map of the city printed on the front page, and at major intersections -- each one of these within a half miles of residents of the city -- that's how they were selected. And we (hams) became a phone booth with flashing lights and a sign on the car and so forth -- should an emergency call be needed after midnight on that night. I think that plan covered some 60 intersections within the city

"This time it was a scaled back call-up but none-the-less it was the same plan and we ended up with 26 major intersections last Thursday when this all occurred. And they were staffed essentially from 8 in the morning until about 11:30 p.m. when we finally secured"

--

What may surprise some is that this entire operation only entailed the use of one repeater on the two meter band. Davis credits the self discipline and emergency service training of the regions ham radio community for making this possible. He also notes that the training never stops:

--

K0GND: "We have nightly nets on the same repeater. There are ARES nets every night of the week. We do lots of drills and a tremendous amount of public service. Last year almost 5000 volunteer hours of public service by the club. And all of those things keep your discipline up and your ability to listen out: - which is a key to running a large net with a lot of people.

--

K0GND tells Newsline that thankfully the ham radio communicators only had to handle a small number of 911 incidents. The worst of these was a house fire that they were requested to report. Another dealt with a police officer involved in tracking down a missing child. And it took the better part of a day before 911 service was restored cross the affected area and the ham radio operators could stand down and go home. (ARNewsline(tm))

**

RESCUE RADIO: SOCAL HAMS ACTIVATE FOR MEXICALI QUAKE

Hams in Los Angeles County activated briefly after shock waves from the 7.2 magnitude earthquake in Baja California. Mexico, were felt at about 03:50 PM Pacific time on Easter Sunday. The Los Angeles Section ARES immediately activated it's emergency net with hams from all over the area checking in.

But there were no reports of commercial communications outages, utility outages or even any damage in and around the local area and soon attention was turned to the South. That's when the nets Spanish speaking operators were asked to monitor the High Frequency bands for possible traffic from the quake area.

Dr. Armondo Montalvo, KI6TAA, in the Los Angeles suburb of Woodland Hills was able to contact Franscisco Menses, XE2FMS, in the city of Mexicali, Mexico, along with mobile operators XE2DZZ and XE2BRL . Initial reports said that most stations in and around the quakes epicenter were without electric power. Also, the major highway between Mexicali and Tijuana, Mexico suffered severe thrust fault damage. This information was forwarded to the United States Geologic Survey for it to act on.

In all, some three dozen stations were involved at one time or another during the call-up, but no large scale ham radio relief effort was needed on either side of the United States and Mexico border. Never the less, area ham radio emergency planners say it was definitely a good test of the ability of the regions hams to respond at a moments notice. (LAX ARES)

**

RESCUE RADIO: KY CLUB WANTS TO RECYCLE OLD TOWERS FOR EMCOMM WORK

A group of Bowling Green, Kentucky area ham radio operators want to give new life to old residential TV towers by incorporating them into an emergency communications system. The Kentucky Colonels Amateur Radio Club and the Kentucky 4th District Amateur Radio Emergency Services are seeking donations of the TV towers, which have become increasingly obsolete as more households have turned to cable, satellite and digital TV providers.

In an article in the Bowling Green Daily News, Bill Schlicht, KJ4DGW of the Kentucky Colonels Amateur Radio Club said members will remove the towers for free, recondition them and install them at numerous locations in the 10-county Barren River Area Development District. This, to support emergency communications among ham radio operators, hospitals, county emergency management directors, American Red Cross chapters and other emergency workers.

Schlicht told the paper that club members are covered by liability insurance during performance of club activities, and removing the TV towers will not cost the homeowner anything. He says that his ham radio association wants to set up at least 16 towers, mainly at area hospitals where ham radio operators can communicate with emergency workers during a large-scale disaster. There are about 400 amateur radio operators in Warren County and the Bowling Green area.

eHam.net)

**

RESCUE RADIO: UK CLUB GETS 5000 POUND PUBLIC SERVICE GRANT

Meantime, over in the United Kingdom, the Itchen Valley Amateur Radio Club has been awarded nearly 5000 British Pounds in Lottery funding. This, to assist with providing community based radio projects that will include supporting the Radio Amateur Emergency Network in providing communications coverage for disaster and emergency exercises as well as real time responses.

The grant will primarily be used to equip a portable radio station with a 25 foot trailer tower with antennas, and a portable generator system to enable the station to provide communications services without mains power or the normal mobile phone networks. This stand alone capability will allow the club to contribute to the telecommunications infrastructure supporting long-distance events that involve communications and control in isolated places.

In addition, part of the grant will provide funds for working with local youth organizations such as Scouts and Guides, as well as other public projects to broaden awareness of amateur radio. 5000 British Pounds is the equivalent of about $7600 United States dollars.

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Montgomery Amateur Radio Club repeater serving Rockville Maryland.

HAM HAPPENINGS: NPR SAYS HAM RADIO IS GROWING

National Public Radio says that ham radio is alive and well, and its even produced a segment of its All Things Considered program to prove it. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--

Ham radio is far from the dying hobby that the nay sayers claim it to be. One that only a few years ago was being touted by techno blogs alongside 35 mm film and home videotape as technologies slated to quickly disappear.

Well, National Public Radio says that the bloggers were wrong because there are now nearly 700,000 U-S citizens who have ham radio licenses. NPR says that number is up by some 60 percent since 1981. And Says NPR, that number is growing.

The NPR story quotes Allen Weiner. He is an analyst at the technology research firm Gartner and Associates. Weiner says that while ham radio will never have the sex appeal of the iPhone, it does have a certain level of what he terms as nerd appeal.

Weiner also explains growth in our specialized communications interest in this way. He says that if it creates its own experience, that's really what's key here. Conversely, if it just emulates an experience that you can get online, it's not going to grow.

The report concludes by noting that even the most die-hard hams admit that amateur radio will never be a mainstream hobby. But says National Public Radio, people are still discovering the joy of communicating with the technology of amateur radio. A technology that has existed for nearly a century.

Still enjoying ham radio from Scottsdale Arizona, I'm Norm Seeley, KI7UP, reporting for the Amateur Radio Newsline.

RADIO LAW: EVEN WHEN ITS WRONG THE FCC IS RIGHT

Parties relying on informal discussions with commission staff do so at their own risk. At least that's the lesson that's been learned KRNW- FM which has been ordered to pay a $5,000 fine for what amounts a simple clerical error based on information a Commission representative gave to the broadcaster.

According to the trade publication Radio World, KRNW FM is located in Chillicothe, Missouri, and is licensed to Northwest Missouri State University. Its case started with the expiration of the license in early 2005, The FCC says that the station didn't file properly until two weeks later, and it didn't seek an STA to continue to operate or give a reason for the failure to file on time.

When the fine was handed down the college, which also owns KXCV FM, appealed. It argued that the fine was unfair because it did in fact try to renew properly. It said FCC staff had told the station manager to file both station renewals on the same form, and the manager did so.

Now, in upholding the fine the commission said that while allows for some stations to file on the same form, the manager should have filed, as she did in the past, a separate renewal application for the KRNW. It added that Commission precedent has established that parties relying on informal discussions with FCC staff do so at their own risk. The commission may still enforce its rules despite the public's reliance on allegedly erroneous staff advice. (RW)

RADIO LW: FCC LOSES COURT BATTLE OVER NET NEUTRALITY

A federal court in Washington D.C. has handed the FCC a major defeat and at the same time has thrown the future of Internet regulations and United States broadband expansion plans into doubt. It happened on Tuesday, April 6th when the U.S. Court of Appeals for the District of Columbia ruled that the Commission lacks authority to require broadband providers to give equal treatment to all Internet traffic flowing over their networks. Amateur Radio Newsline's Frank Haas, KB4T, has the details:

--

The unanimous ruling by the three-judge panel marks a serious setback for the FCC which is trying to adopt official net neutrality regulations. FCC Chairman Julius Genachowski believes that such rules are needed to prevent phone and cable companies from using their control over Internet access to favor some kinds of online content and services over others.

On the other side, the court decision was a big victory for Comcast Corporation. Comcast is the nation's largest cable company and it had challenged the FCC's authority to impose network neutrality obligations on broadband providers. This following a 2008 Commission finding that centered on Comcast's actions in 2007 when it interfered with an online file-sharing service called BitTorrent.

In its decision, the court essentially held that it was not for the FCC to determine which of Comcast's customers was entitled to better levels of service than another. Rather that this is a business decision that Comcast was free to make.

Public advocacy groups have already reacted negatively to the court decision. They contend that the ramifications of the ruling are much broader. That's because it undercuts the FCC's ability to prevent broadband providers from becoming gatekeepers for many kinds of online services. This could include Internet-based phone services and even software that runs in a Web browser.

The decision also has serious implications for the FCC's national broadband plan released by the FCC last month. The Commission needs undisputed authority to regulate broadband in order to pursue some its key recommendations. In a statement following the release of the decision, the FCC said it remains committed to promoting an open Internet and to policies that will bring the enormous benefits of broadband to all Americans.

At this point the FCC has several options. It can do nothing and let the ruling stand. That's highly unlikely.

It could ask Congress to give it explicit authority to regulate broadband, but that could take years. Or, it could appeal the matter to the United States Supreme Court which could also take years.

Or as some observers believe, the Commission might simply reclassify broadband as a more heavily controlled telecommunications service. One which could be subjected to both intensive scrutiny and heavy regulation.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

We should know what direction the Commission will take in a matter of weeks. (Published news reports)

HOT OFF THE PRESS: NEW DX BOOK AVAILABLE BY W9KNI

'A Year of DX' is a new book by noted author Bob Locher, W9KNI that follows him as he makes an all out effort to win the 2008 running of CQ Magazine's DX Marathon. The Marathon is a year long operating event during which a contestant works as many countries and CQ zones as possible, any band or any mode.

While the book chronicles Bob's efforts in the pileups and through the lonely watches of the night, it also contains other discussions of what DX'ing is all about. These include the possibilities of DX'ing in low sun spot periods contributed by Jim Henderson, KF7E, a chapter on optimizing your SSB transmit audio by Hall of Famer Chip Margelli, K7JA, a discussion of what is the ideal linear amplifier, and much more.

Anyone who read and enjoyed Bob's 'Compete DX'er' is sure to find this book equally worthwhile. Its publication date is scheduled for May 1st. More information is on-line at www.idiompress.com/yearofdx.php (Via e-mail)

**

HAMVENTION HAPPENINGS: SPEAKERS LIST RELEASED FOR DX FORUM

The SouthWest Ohio DX Association has started to announced its line-up for the DX Forum at this year's Dayton Hamvention. Guest speakers include Tom Harrell, N4XP, of the K4M Midway Island 2009 DXpedition, George Wallner, AA7JV who operated TX3A from Chesterfield Reef and Paul Ewing, N6PSE of the YI9PSE operation from Iraq. Don Dubob, N6JRL, will be this year's forum moderator and at the close of the session the SouthWest Ohio DX Association will be raffling off a Yaesu FT-2000 transceiver. (SWODXA)

**

PROMOTING HAM RADIO: FREE ARRL WEBINAR ON PUBLICIZING FIELD DAY APRIL 22

Hams involved in planning their clubs Field Day activities are invited to take part in free 90 minute webinar on April 22nd. Hosted by the ARRL's Atlantic Division in cooperation with the League's Public Relations Committee, this session will focus on how to publicize your groups Field Day outing so as to gain maximum recognition for the hobby.

Among the topics to be covered will be how to set up a Field Day publicity calendar. How to get audio and video Public Service Announcements on local radio and TV stations. How to get proclamations issued and even how to use social networks like Facebook and Twitter to draw people to your Field Day event.

Also covered will be the correct way to invite elected officials and dignitaries to your Field Day site. Depending on whom you get to show up, this can bring with it good local, regional or even national press coverage. And according to Allen Pitts, W1AGP, who is the ARRL's Public Relations Manager, the guest list reads like a whose who in ham radio media relations:

--

W1AGP: "You have got Walt Palmer recently of ABC News - television; Diana Eng will be working with Facebook and Twitter; Bill Morine on print journalism will be talking on how to schedule and set up things; Kevin O'Dell who until recently made television commercials will be talking about how to make up your own Public Service Announcements and videos. And then of coarse you have got me."

--

And I'll be on that panel too talking about media relations with broadcast radio.

Again, the date for this on-line seminar is Thursday, April 22nd beginning at 9:00 PM Eastern Daylight Time. To pre-register take your web browser to https://www1.gotomeeting.com/register/932645064   (ARRL)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESTRUCTURING: BAHARAIN IMPROVES ITS AMATEUR SERVICE

Licensing of the amateur service in the Kingdom of Bahrain has taken a major step forward. This, with the release of new amateur service rules by the nations telecommunications regulatory authority.

New additions for the Bahrain General Class licensees include 135.7 to 137.8kHz with a power limit of 10 watts. Also, regulators have extended the 160 meter band changing the upper limit to 2000 kHz. They have also expanded 40 meters up to 7200 kHz and added access to the 30 meter band as well. Above 30 MHz new additions include 6 meters from 50 to 52MHz and improved access to bands at 430MHz and above.

Also, Bahrain now has a new Intermediate Class license that permits operation at 28 MHz and above with power output to the antenna of 100 watts. Aeronautical Mobile, Maritime Mobile, Mobile and Portable operations are also permitted within the terms of the new license.

It should be noted that with the exception of the segment 50 to 50.5MHz, which is primary, all new allocations have been granted on a secondary basis. Permitted power to the antenna on all bands except 136 kHz is 1500 watts. (GB2RS)

**

WORLDBEAT: WORLD AMATEUR RADIO DAY APRIL 19

"Amateur Radio: combining communication experience with modern digital techniques" is the theme of this years World Amateur Radio Day. Scheduled for April 18th, World Amateur Radio Day is an international celebration of the hobby sponsored by the International Amateur Radio Union and its member societies representing over 150 countries.

Since 1925, the IARU has been instrumental in coordinating and representing amateur radio on global matters. It says that in today's world that it is radio amateurs who are finding ways to use frequencies at the fringes of the radio spectrum while developing marriages of radio and the internet, and experimenting with digital and satellite communications.

For information about World Amateur Radio Day and the International Amateur Radio Union please take your web browser to www dot IARU dot org. (IARU)

**

HAM RADIO IN SPACE: DARA TO MATCH DONATIONS TO AMSAT

The Dayton Amateur Radio Association says that it will match one-for-one any donations made to AMSAT-NA between now and June 30th of 2010. This, up to a maximum of $5,000.

The matching funds will be earmarked in support of the "Getting AMSAT Back into Space" campaign and help us raise the funds needed for the next satellite project which is a cubesat that will provide a 2 meter-70 Centimeter FM transponder that will match the ground performance of AO-51.

More on this matching fund is on line at www.amsat.org. (ANS)

**

HAM RADIO IN SPACE: AMSAT SPACE SYMPOSIUM IN CHICAGO IN OCTOBER

The 2010 AMSAT Space Symposium will be held in Chicago, Illinois from October 8th through the 10th. This years venue is the Elk Grove Holiday Inn near O'Hare Airport. Topics to be covered include presentations on operating techniques along with other sessions covering plans for the future of ham radio in space. For more information please visit www.amsat.org on the World Wide Web. (ANS)

**

ON THE AIR: MOONBOUNCE USING THE 1000 FOOT ARECIBO DISH

The Arecibo Observatory Amateur Radio Club will be putting the 1000-foot radio telescope on the air for 432 MHz E-M-E contacts from April 16th to the 18th. The callsign used will be KP4AO with a transmit frequency of 432.045 MHz and receiving between 432.050 to 432.060 MHz. KP4AO will transmit with 400 watts out but the giant dish will give the signal about 60 db of gain. Translated it means that KP4AO should be able to be heard with a small hand-held yagi pointed at the moon and a good receiver. A 15 db gain antenna and 100 watts will be enough to KP4AO on CW. More is on-line www.southgatearc.org/news/april2010/arecibo_432_moonbounce.htm (Southgate, K1JT)

**

ON THE AIR: CELEBRATING MEXICO'S INDEPENDENCE

On the air, word that the Mexican Federal Telecommunications has authorized the use of the special 4 B prefix for Mexican stations throughout the year 2010. The use of this prefix is to celebrate the bicentennial of Mexico's independence and the centennial of the Mexican Revolution. (OPDX)

**

ON THE AIR: CV7G CELEBRATES THE FOUNDING OF MODERN URUGUAY

And CX7ABK, will be using the special callsign CV7G between April 17th and the 19th. This operation celebrates the landing of 33 Orientales on Agraciada Beach in Uruguay. This was a militant revolutionary group led by Juan Antonio Lavalleja against the Empire of Brazil. Their actions culminated in the foundation of modern Uruguay. And in celebration of this event CV7G will be on 40 and 20 meter SSB. A special QSL card will be issued. You send your QSL via CX7ABK. (OPDX)

**

PROPAGATION: SOLAR WINDSTORM HITS EARTH

In propagation news, what's described as a sharp gust of solar wind hit Earth's magnetosphere on Monday, April 5th, at approximately 0800 UTC. It also sparked the strongest geomagnetic storm of the year.

According to Spaceweather dot com, the event registered 7 on the 0-to-9 K index scale of magnetic disturbances. Although the storm was subsiding by Wednesday morning, April 7th, it was not over and high-latitude sky watchers were told to remain alert for the possibility of aurora propagation. (Spaceweather)

**

DX

In DX, PG5M, has made available his story called the 'Pacific 2009 Ultra Light Solo DXpedition' in PDF format on the World Wide Web. Its 12 pages long and goes into detail about his activities and netting 13000 QSOs from Fiji, Tuvalu and Tarawa. You can downloaded it at www.dx.to

On the bands, word that S53A is now active from Zanzibar as 5-eye-one-S. This is his first holiday style trip with some radio operation as when time permits. He has been reported on 20. 15 and 10 meters mostly on CW. QSL via S53A, direct or via the bureau.

JI5RPT, will be active as JD1BLY from Chichijima Island between May 2nd and the 7th. His operation will be on 40 through 6 meters using CW, SSB, Digital and the Satellites. QSL via his home callsign JI5RPT.

Lastly, , EA8AY, will be active from the Canary Islands as EF8E. This during the CQWW
WPX CW Contest on May 29th and 30th. QSL via EA8AY.

(Above from various DX news sources)

**

THAT FINAL ITEM: ITS SPRING ARDF TIME

And finally this week, as the weather warms, it's time to start planning for outdoor radio fun this summer. Opportunities to win medals by finding hidden transmitters are coming, as Newsline's Joe Moell, K0OV, explains.

--

More and more hams every year are discovering the fun of tracking hidden radio transmitters in their cars or on foot. The on-foot variety of foxhunting has become an international sport, with names such as foxtailing, radio-orienteering and ARDF. USA is one of about 30 countries with an active ARDF program, including national championships and participation in the World Championships every two years.

To see the USA's best on-foot foxhunters in action, to learn from them, and to try it for yourself, make plans to come to Ohio this spring. The Tenth USA ARDF Championships will get under way on Friday, May 21. It's a three-day weekend of practice sessions, a big two-meter hunt, and another hunt on 80 meters. It's open to anyone at any foxhunting skill level, with or without a ham license. If you're a senior, don't worry about trying to compete against teenagers. Equal medals will be awarded in six separate age categories for OM's from under 18 to over 70. Five similar age categories divide up the YLs. To be even better prepared, attend the optional two-day intensive training camp just before the championships.

What could you win? Possibly a medal and a place on our country's team going to the ARDF World Championships in Croatia this coming September. USA can only field a maximum of three people in each age and gender category, so our national championships determine who will go.

Will this be the year that you win a radio-orienteering medal? The registration deadline is coming soon. So for everything you need to know about the USA Championships, including schedules, registration forms and equipment ideas, point your Web browser to www.homingin.com. That's HomingIn, as one word, homingin.com. You can also learn about the World Championships in Croatia and the annual CQ Worldwide Foxhunting Weekend.

From southern California, this is Joe Moell Kay-Zero-Oscar-Victor for Amateur Radio Newsline.

--

Every year interest in Amateur Radio Direction Finding grows. Who knows. One of these days it could become popular enough that the ham radio community might petition for it to become an Olympic medal level sport. (K0OV)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson, KQ6FM, saying 73 from Reno, Nevada, and we thank you for listening.

Here's an attempt to reformat the numbers better:

The ARS License Numbers:

As of May 14, 2000:

Novice - 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of February 22, 2010:

Novice - 16,878 (2.5%)
Technician - 335,694 (49.0%)
Technician Plus - 115 (>0.1%)
General - 151,663 (22.1%)
Advanced - 60,586 (8.8%)
Extra - 119,806 (17.5%)

Total Tech/TechPlus - 335,809 (49.0%)

Total all classes - 684,742

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042
General - increase of 17,461
Advanced - decrease of 30,732
Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to February 22, 2010:

Novice - decrease of 32,451
Technician - increase of 130,300
Technician Plus - decrease of 128,745
General - increase of 38,986
Advanced - decrease of 39,196
Extra - increase of 41,056

Total Tech/TechPlus - increase of 1,555

Total all classes - increase of 9,950

>From February 22, 2007, to February 22, 2010:

Novice - decrease of 6,018
Technician - increase of 42,186
Technician Plus - decrease of 30,703
General - increase of 21,525
Advanced - decrease of 8,464
Extra - increase of 11,536

Total Tech/TechPlus - increase of 11,483

Total all classes - increase of 30,062

73 de Jim, N2EY

Is there a point to presenting the statistics?

It appears that the Technician (w/ or w/o HF) class remains approximately half of all licenses actively maintained, and relatively unchanged over 10 years. There are also Novice and Advanced licenses that are being renewed without upgrading (about 10% of all licenses [11.3%]). The average number of Advanced and Extra classes is approximately constant, although there has been a shift from one class to the other.

Is there anything you want to conclude from all of this?

> -------------------
> Is there a point to presenting the statistics?

Actually, there are two:

The first is to provide an archive of the number of hams in the USA. In the old days we had paper callbooks and CD-ROMs, but as time goes on dependence on the online databases has become pretty standard. That's fine for right-now information, but for historical purposes, what do we do?

By posting the numbers, all it takes is a google search to see trends and changes. As long as groups are archived, the data will be there for all to see.

The second reason is to see the results of rules changes and other influences. I've seen many claims from different people that "ham radio is dying", "ham radio is growing", "there are X hams in the USA", etc. By posting actual totals from the same source over a period of years, the reality becomes apparent.

> It appears that the Technician (w/ or w/o HF) class remains approximately
> half of all licenses actively maintained, and relatively unchanged over 1
0
> years.

Just under half. All Techs and Tech Pluses have had the same privileges since Feb 2007; there is no difference anymore. Soon the Tech Plus will completely disappear, as the last one expires in June.

>�There are also Novice and Advanced licenses that are being renewe

d
> without upgrading (about 10% of all licenses [11.3%]).

The number of Novices is dropping much more rapidly than the number of Advanceds. In the past ten years the number of Novices has dropped to about a third of what it was, but Advanceds are at about 60%.

Ten years ago we had a 6 license class system. Very soon we will have 5 classes, as the Tech Plus disappears. At some time in the future, when the last Novice expires and isn't renewed, we'll have a 4 class system.

But it may be a very long time before the last Advanced goes away, giving us a 3 class system, judging by how slowly that class's license numbers are declining.

>�The average number
> of Advanced and Extra classes is approximately constant, although there h
as
> been a shift from one class to the other.

Which means a lot more US hams have full privileges.

The big gains have come in the General class.

> Is there anything you want to conclude from all of this?

Lots of things can be concluded. Perhaps the most important is the general trend of how many hams we have in the USA, and is the number growing or dropping?

Another purpose is to see how true various predictions have turned out to be. It turns out that predictions of rapid growth and rapid decline were both untrue.

Looking back, ten years ago there were about 675,000 US amateurs. From 2000 to 2003, our numbers grew to about 686,000, then from 2003 to 2007 declined to about 655,000. Since 2007 we've gained over 30,000, and now are almost back to the 2003 peak. If the growth continues, we'll soon have a new all-time high.

Growth is good - we cannot expect to keep our bands and privileges with a constantly declining number of hams. But the growth hasn't kept up with the growth rate of the US population. And despite all the changes in license requirements and privileges, the growth hasn't been anything close to what it was in decades such as the 1930s, 1950s, 1970s and 1980s.

Which pretty means that all the frantic arm waving and cries
of the utter destruction of Amateur Radio due to the no code
changes in the licensing were unwarranted.

The earlier growth of Amateur Radio was due to the "ow wow"
factor when it was new, and then the "we can't let THEM win"
factor during the Cold War.

The current growth is due to "good publicity" concerning the
role Amateur Radio has in emergencies.

As long as we don't come across as a bunch of buffoons or
cranky old men, we should continue to grow.

Maybe. It's only been three years.

Note that after the changes of 2000, we had three years of growth, and
then four years of decline. Hopefully that pattern won't repeat, and
the growth will continue.

But also note that the predictions of lots of growth have been unwarranted as well.
>
> The earlier growth of Amateur Radio was due to the "ow wow" factor when it was new, and then the "we can't let THEM win" factor during the Cold War.

I respectfully disagree with that, in many ways.

Sure, the oh-wow factor was there in the early days (before and just after WW1). But note that during the 1920s, when Radio (meaning broadcasting) was the cat's pajamas, amateur radio grew very slowly. There were fewer than 20,000 US amateurs in 1929.

OTOH, during the 1930s the number of US hams almost tripled, despite the Great Depression and much tighter regulation.

The Cold War may have been a factor in the 1950s, but I suspect that the oh-wow factor was still very big then. There was also the increasing affluence of middle-class Americans plus inexpensive WW2 surplus and kits to boost amateur radio. Yet during the 1960s, US ham radio hardly grew at all.

The biggest growth in recent times was during the 1970s and 1980s, despite stagflation, incentive licensing, energy crises, and competition from the cb boom. From the late 1960s to the mid 1980s the number of US hams about doubled. The growth actually went down in the 1990s.

> The current growth is due to "good publicity" concerning the role Amateur Radio has in emergencies.

Certainly a factor, but not the only one. Another is the large number of baby boomers approaching retirement age. Yet another is the maturation of the internet - it's an appliance now, not the golly-whiz-bang new thing of a few years ago.

Plus there are so many different things to do in ham radio today!

> As long as we don't come across as a bunch of buffoons or cranky old men, we should continue to grow.
>

Hopefully. Another thing that's needed is continued publicity.

But we're still not keeping up with the growth in the US population. Yet.

==> FCC NEWS: FCC ALLOWS ROBOTIC DEVICE IN AMATEUR BAND

In January 2008, a company called ReconRobotics filed a request with the FCC for a waiver of Part 90 of the Commission's Rules with respect to the Recon Scout -- a remote-controlled, maneuverable surveillance robot designed for use in areas that may be too hazardous for human entry. A waiver is required to permit licensing of the Recon Scout because the device operates in the 430-448 MHz band, which is allocated to the Federal Government Radiolocation service on a primary basis, as well as the Amateur Radio Service and certain non-federal radiolocation systems on a secondary basis. More than two years later, the FCC granted the waiver request in the form of an Order (WP Docket No 08-63), subject to certain conditions.

In its comments filed in May 2008, the ARRL called on the FCC to deny ReconRobotics waiver request, "either permanently or even temporarily." The FCC noted in the waiver that they had received more than 70 comments "generally consist[ing] of public safety and law enforcement entities supporting the waiver request, and amateur radio operators opposing it." In their initial waiver request, ReconRobotics asserted that even thought the device operates in a in an area allocated to other services, including Amateur Radio, the Recon Scout operates with only 1 W peak power and it is "unlikely to cause interference to these services."

The FCC noted in the Order that they had received more than 70 comments "generally consist[ing] of public safety and law enforcement entities supporting the waiver request, and amateur radio operators opposing it." In their initial waiver request, ReconRobotics asserted that even though the device operates in an area allocated to other services, including Amateur Radio, the Recon Scout operates with only 1 W peak power and it is "unlikely to cause interference to these services."

==> PUBLIC SERVICE: INJURED COLORADO SKIER USES AMATEUR RADIO TO SUMMON HELP

<http://www.arrl.org/news/images/nms/fullsized/1418.jpg> When Steve Priem, N0YIV, of Boulder, Colorado, decided to go backcountry skiing near Yankee Doodle Lake in the Guinn Mountain area of Colorado's Roosevelt National Forest on Friday, February 19, the 60 year old ham made sure he was well prepared: Not only did he take along a rescue whistle, he made sure his handheld transceiver was fully charged and in his pack.

It's a good thing he did: When Priem was injured while skiing, he used his radio to summon help. According to ARRL Colorado Section Manager Jeff Ryan, K0RM, a ham more than 100 miles away in Colorado Springs answered Priem's call for help and called 911. Priem was able to provide GPS coordinates for his position. Read more here
<http://www.arrl.org/news/stories/2010/02/22/11353/?nc=1>.

==> LAUNCH OF NEW ARRL WEB SITE DELAYED TO "GET IT RIGHT"

After meeting with ARRL staff on February 23 -- two days before the new ARRL Web site was to launch -- ARRL Chief Operating Officer Harold Kramer, WJ1B, made the decision to delay the unveiling of the Web site until late March. "Work on the new ARRL Web site has progressed at a frantic pace but there are still some potential 'bugs' that could affect members. We need to be sure we get it right," Kramer said. "Our members' security, information and ability to actually use of all the options on the new site outweigh any rush to meet an artificial deadline. It's just good customer service."

The new Web site -- which will contain the online store, class registrations, audio, video, DXCC information, contest data, individualized member options and other 21st century opportunities for members -- is one of the largest technology upgrade activities that ARRL and Fathom, the company programming the site, have ever undertaken. "Reviewers have been unanimously impressed and are helping make sure we create the easiest, most enjoyable online experience possible," Kramer explained.

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, the current ARRL Web site is not only used by ARRL members, but is a prime reference source for engineers, hams and wireless technicians around the world, making it the premier place to find information about Amateur Radio, its activities and the sciences behind it. "The Web is our main face to the world, and the new Web site will be fantastic," he said. "Although we all regret the delay, I believe our members will appreciate our diligence about the ease of use, security and navigation for the new site."

==> ON THE AIR: ARRL DX PHONE CONTEST BRINGS DX IN FULL FORCE TO THE HF

BANDS!

<http://www.arrl.org/news/images/nms/fullsized/1419.jpg> With the 2010 ARRL International DX CW Contest now history, the first weekend in March brings the next round of competition: the 2010 ARRL International DX Phone Contest. Like its CW predecessor, this event focuses on DX stations working all US states and Canadian provinces, while US and Canadian amateurs try to work as many DX countries as possible over the 48 hour contest period. Read more here <http://www.arrl.org/news/stories/2010/02/24/11356/?nc=1>.

==> SECTION NEWS: ARRL VIRGINIA SECTION MANAGER ELECTION RESULTS

In the only Section Manager race this winter, Carl Clements, W4CAC, was re-elected as the ARRL Virginia Section Manager. He received 855 votes; his opponent, Glen Sage, W4GHS, received 511 votes. Election ballots were counted February 23 at ARRL Headquarters. Clements, of Portsmouth, starts his new two year term of office on April 1, 2010. In North Carolina, Bill Morine, N2COP, of Wilmington begins his first term as Section Manager on April 1. Section Manager Tim Slay, N4IB, decided not to run again for another term of office, and Morine was the only nominee. Slay has served two terms as North Carolina's Section Manager.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning April 1: Pete Cecere, N2YJZ, Eastern New York; Eric Olena, WB3FPL, Eastern Pennsylvania; Gary Stratton, K5GLS, Louisiana; Bob Schneider, AH6J, Pacific; Steve Early, AD6VI, San Diego, and Scott Rausch, WA0VKC, South Dakota.

==> AMATEUR RADIO DIRECTION FINDING: FOXES, FITNESS AND FUN IN 2010

By ARRL ARDF Coordinator Joe Moell, K0OV

<http://www.arrl.org/news/features/2010/02/24/11358/?nc=1> "Geeks in the woods!" That's how Jay Hennigan, WB6RDV, of Goleta, California, describes Amateur Radio Direction Finding (ARDF). Several times a year, Jay gets together with friends for a session of this international Amateur Radio sport -- also called foxtailing and radio-orienteering. As they set out, five 2 meter "foxes" are somewhere in the woods, transmitting for one minute each in sequence. Armed with a special ARDF set or just a handheld transceiver with a measuring-tape Yagi and attenuator, they see how fast they can run or walk from the start to each transmitter in optimum order and then back to the start, or perhaps to a separate finish point. To help them navigate, they carry compasses and special orienteering maps, but they aren't allowed to have GPS displays or other high-tech navigation aids. Standardized ARDF courses provide a good test of equipment performance and hunter skill. It's friendly competition combined with great exercise. It attracts "techies" and "jocks" of all ages who don't need a ham license to get started. And for some, it leads to medals at national and international competitions. Read more here <http://www.arrl.org/news/features/2010/02/24/11358/?nc=1>.

==> INTERNATIONAL NEWS: ICELAND AMATEURS RECEIVE NEW PRIVILEGES

As of Friday, February 19, Iceland's Post and Telecom Administration (PTA <http://www.pta.is/Default.aspx?cat_id=101>) granted temporary experimental access to the 4 and 600 meter bands at least through the end of 2010, according to Islenzkir Radioamatorar (IRA <http://www.ira.is/pages/viewpage.action?pageId=4194372>) President Jonas Bjarnason, TF2JB; the ITA is Iceland's IARU <http://www.iaru.org/> Member-Society. After obtaining a special license from the PTA, Bjarnason said that TF stations with "N" or "G" class licenses may now operate between 493-510 kHz and 70.000-70.200 MHz running 100 W. Amateur operations on both bands are granted on a secondary basis.

==> W1AW ANNOUNCES NEW SCHEDULE FOR DIGITAL BULLETIN TRANSMISSIONS

Beginning Monday, March 15, W1AW <http://www.arrl.org/w1aw.html>, the Hiram Percy Maxim Memorial Station, will alternate the digital modes used for its digital bulletin transmissions. While Baudot, PSK31 and MFSK16 still make up the digital mode complement, W1AW Station Manager Joe Carcia, NJ1Q, says that the schedule will be altered to give more exposure to PSK31 and MFSK16. "Because of time constraints and the varying lengths of digital bulletins, there were many instances where only Baudot was used," he said. "With the new schedule, amateurs preferring either PSK31 or MFSK16 will no longer find these modes secondary." Read more here <http://www.arrl.org/news/stories/2010/02/16/11343/?nc=1>.

==> SOLAR UPDATE

Tad "Late lies the wintry Sun a-bed <http://www.poemhunter.com/poem/winter-time/>" Cook, K7RA, reports: The unbroken string of sunspots continues. Two new groups -- 1050 and 1051 -- appeared in the past two days, and we've now had 36 continuous days with sunspots. Prior to that, there is just a single day once in a while with no spots. The last time we had more than one day of no sunspots was a few months ago, November 23 through December 8. Look for more information on the ARRL Web site on Friday, February 26, including a discussion about an increase in reports of 10 meter activity, and a "reverse beacon network" that uses CW skimmers to automatically check many frequencies from many locations, and then list the calls heard on a Web site. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Robert Louis Stevenson's Winter Time <http://www.poemhunter.com/poem/winter-time/>.

==> ARRL FIELD DAY : 2010 FIELD DAY PACKETS NOW AVAILABLE

It's that time of year again -- time to start gearing up for ARRL Field Day, June 26-27, 2010! ARRL's flagship operating event -- always held the fourth full weekend in June -- brings together new and experienced hams for 24 hours of operating fun. Field Day packets are now available for download <http://www.arrl.org/contests/forms/fd-2010-packet.pdf> and include the complete rules (including changes for 2010), as well as other reference items such as forms, ARRL Section abbreviation list, entry submission instructions, a Frequently Asked Questions section, guidelines for getting bonus points, instructions for GOTA stations, a kit to publicize your event with the local press and more.

==> W1AW NEWS: MARCH W1AW/WEST COAST QUALIFYING RUN SCHEDULE

The March schedules for the W1AW and West Coast Qualifying Runs were inadvertently left out of the March issue of QST. The March schedules for W1AW are as follows: Friday, March 5 at 10 PM EST (Saturday, March 6 at 0300 UTC) for 10-25 WPM and Tuesday, March 16 at 7 PM EDT (2300 UTC) for 10-40 WPM. The West Coast Qualifying run will be transmitted by station K6KPH on Saturday, March 13 at 2 PM PDT (2200 UTC) for 10-35 WPM. The run will be transmitted simultaneously on 3581.5, 7047.5, 14047.5, 18097.5 and 21067.5 kHz.

==> THIS WEEK ON THE RADIO

This week, look for an NCCC Sprint Ladder on February 26. The Russian PSK WW Contest and the CQ 160 Meter Contest (SSB) are on February 26-27. The REF Contest (SSB), the EPC WW DX Contest, the UBA DX Contest (CW), the Mississippi QSO Party and the North American QSO Party (RTTY) are all on February 27-28. The High Speed Club CW Contest is February 28. The North Carolina QSO Party is February 28-March 1. The ARS Spartan Sprint and the AGCW YL-CW Party are both on March 2. Next week, look for the ARRL International DX Contest (SSB) <http://www.arrl.org/contests/rules/2010/intldx.html> on March 6-7. The Wake-Up! QRP Sprint is March 6 and the DARC 10 Meter Digital Contest is March 7. The CLARA HF Contest is March 9-10 (continuing on March 13-14) and the CWops Mini-CWT Test is March 10-11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, March 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, April 2, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1698 - February 26, 2010

Amateur Radio Newsline report number 1698 with a release date of Friday, February 26th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. RACES is reborn in Illinois, the FCC puts a rescue radio robot right in the middle of the 70cm ham band, an HT call leads to a rescue in a skiing accident, a ham radio hero from India to meet with the United Kingdom's Royal Family, Iceland gives its hams 4 meters and I-A-R-U Region 3 decides to adopt the Japanese Yen as its only exchange currency. Find out the reason why on Amateur Radio Newsline(tm) report number 1698 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: RACES IS REBORN IN ILLINOIS

Rescue radio using ham operators has been given a new lease on life in Illinois. This, with a compact between the Illinois Emergency Management Agency and amateur radio operators throughout the state for them to provide an additional layer of emergency communications during disasters. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the details:

--

Illinois Emergency Management Agency director Andrew Velasquez III is praising the agreement and those who will become part of it. Velasquez, quoted in a news release issued jointly by Governor Patrick Quinn's office and the IEMA, says the state is "very fortunate to have a dedicated group of volunteer amateur radio operators who are willing to donate their time and expertise to help make Illinois safer." Velasquez noted the agreement will further strengthen the state's communications interoperability plan - which includes layers of redundant communications.

Brad Pioveson, W9FX, of Benton, has been appointed volunteer state officer for the reconstituted Radio Amateur Civil Emergency Services program. According to the IEMA, he'll be serving as a single point of contact between the state office and the state's amateur radio community.

In addition to throwing its support behind amateur radio as an integral part of emergency communications in Illinois, the state EMA also agreed to equip a RACES station with equipment and resources needed to maintain both wired and wireless communications with the state emergency operations center in Springfield - this during emergencies. Pioveson says there are some 20-thousand licensed hams in the state, many of whom are part of what he called "a very rich history of providing emergency communications" for Illinois.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Illinois ARRL Section Manager Thomas Ciciora, KA9QPN, gave his personal thanks to W9FX, K9DUE, N9LQF, and the other folks whom he may have inadvertently forgotten but who helped to make this dream into a reality. (KA9QPN)

**

RADIO LAW: FCC TO PERMIT RESCUE RADIO ROBOT IN THE 430 TO 450 MHz BAND

The FCC has issued a waiver of the Part 90 rules to permit a company called Reconrobotics Incorporated to sell a remote controlled security robot that will operate in the 430 to 448 MHz band. This is spectrum that is primary to the Federal Radiolocation Service but also encompasses the Amateur Service weak signal, satellite and repeater subbands.

The waiver permits Reconrobitics to manufacture and sell a device called the Recon Scout. This is described as a device designed for state and local law enforcement and firefighting agencies, and security personnel in critical infrastructure industries. The Recon Scout can be thrown, dropped, or launched into potentially hazardous areas and can provide real-time video to an operator located a safe distance away. Typical applications will include such things as checking a building prior to forced entry, searching vehicle undercarriages for explosives and searching for survivors in a burning structure.

The Recon Scout transmits the analog video signal to the operator on one of three six megahertz channels. These are 430 to 436 MHz, 436 to 442 MHz, and 442 to 448 MHz. Reconrobotics says that multiple channels are necessary in order to avoid interference during incidents where multiple Recon Scouts are in use, but that such situations should be rare.

The company's now approved proposal is that the first unit sold to a responding organization would operate on 442 to 448 MHz. That happens to be where thousands of ham radio repeaters operate. The 436 to 442 MHz version being sold only to entities that already own the 442 to 448 MHz version, and the 430 to 436 MHz version being sold only to entities that already own both of the others.

In approving the waiver, the FCC told Reconrobotics . the Recon Scout will have to operate on a secondary basis where it cannot cause interference and is not protected from interference to all Federal users and licensed non-Federal users including radio amateurs. The FCC also warned prospective users that operation of the Recon Scout in an unauthorized manner will subject licensees to Commission enforcement action and license revocation. It also said that widespread improper use of the device could lead the Commission to stop granting or renewing Recon Scout authorizations. More on this next week.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles. (FCC, QRZ.com)

RESCUE RADIO: HT CALL BRINGS HELP TO DOWNED SKIIER

A Colorado backcountry skier who injured himself in a fall west of Eldora Mountain Resort was rescued. This, after using a handheld amateur radio transceiver to call for help.

Boulder County sheriff's officials say 60-year-old Steve Priem, N0YIV, of Boulder used the radio after falling Friday afternoon, Friday, February 19th. According to the on-line Colorado Connection, another unidentified ham radio operator about 120 miles away heard Priem's request for assistance and called 911. Rescue teams were dispatched with part of the coordination taking place using amateur radio simplex frequencies and area repeaters.

N0YIV was able to provide rescuers with GPS coordinates for his position and had with him a rescue whistle. He was treated at a hospital for non-life-threatening injuries. Sheriff's officials described Priem as an experienced backcountry skier who was well prepared for almost any emergency. (ColoradoConnection, ARNewsline(tm))

RESCUE RADIO: HAM HERO VU2RBI TO MEET WITH UK ROYAL FAMILY

One of the worlds most decorated hams has been invited to meet with the British Royal Family. Steve Herman, W7VOA, is in New Deli, with the details:

--

VU2RBI, Bharathi Devulapalli Prasad, announced on her Facebook page (Feb. 22) that she has been invited to speak at the Commonwealth Day Observance in London in March 8th in the presence of HM The Queen, HRH Duke of Edinburgh, the Prince of Wales, the Duchess of Cornwall and all Commonwealth High Commissioners. She says she will be talking to the distinguished group about science technology and society, which she says will include her personal experiences on ham radio.

Bharati, one of ham radio's most prominent YL's, has won several significant international awards related to her service to society by using amateur radio. She was part of the Andaman DX'pedition team that won the ARRL's 2005 International Humanitarian Award. The December 2004 earthquake and resulting tsunami that devastated South Asia coastal areas swiftly shifted the role of the DX operation into an emergency communication link with India's mainland.

For the Amateur Radio Newsline, I'm Steve Herman, W7VOA, in New Deli.

--

VU2RBI is active on HF CW and SSB from her shack in New Delhi. Her husband and two children are also licensed radio amateurs as well. (W7VOA)

**

RESTRUCTURING: ICELAND ON 4 METERS AND 600 METERS

Hams in Iceland now have access to both the 4 meter and 600 meter bands. On February 19th the Icelandic Post and Telecom Administration granted a temporary experimental access to the 70.000 to 70.200 MHz through December 31st. Access is on secondary basis with a maximum bandwidth is 16 kHz and power limit is 100 watts.

At the same time, the Post and Telecom Administration granted a temporary experimental access to the 600 meter band also valid until December 31st. The allotted frequency span is 493 to 510 kHz. On a secondary basis using CW only at a power limit of 100 watts.

In both cases current amateur licensees need to apply to the Post and Telecom Administration for a special experimental permit. This is open to both Icelandic "N" and "G" license classes. (TF2JB)

WORLDBEAT: IARU REGION 3 ADOPTS YEN ONLY ACCOUNTING

No more US dollars for International Amateur Radio Union Region 3. At the last IARU Region 3 Conference, it was voted that all accounts of the Region would now be maintained only in Japanese Yen and not in the two currency system of US Dollars and Japanese Yen as has been done for many years. The reasoning was that all accounts are maintained in Tokyo and the old system involved a double currency conversion that in many cases resulted in losses before it was credited to the IARU Region 3 banks. All subscriptions to Region 3 from member societies will also now be calculated in Japanese Yen only. (Southgate)

RADIO LAW: STUDY SAYS MOBILE CELLPHONE BANS WORK BEST IN URBAN AREAS

A new study on the effectiveness of banning mobile operation of non hands free cellphone use has concluded that they work best in urban areas. Bruce Tennant, K6PZW, has more:

--

A new investigation aimed at analyzing the impact of hand-held cell phone legislation on driving safety concludes that usage ban laws are having more of an impact in densely populated urban areas with a higher number of licensed drivers than in rural areas where there are fewer licensed drivers.

The study, conducted by Sheldon Jacobson, a professor of computer science and the director of the simulation and optimization laboratory in Illinois, analyzed the relationship between pre- and post-law automobile accident rates using public data from 62 counties in New York. He and his team found that after banning hand-held cell phone use while driving, 46 counties in New York experienced lower fatal accident rates. 10 of these did so at a statistically significant level, while all 62 counties experienced lower personal injury accident rates.

Jacobson and his team of researchers also discovered that the personal injury accident rate decrease was more substantive in counties such as Bronx and Queens New York. These are also boroughs in New York City proper where there was a high density of licensed drivers rather than in sparsely populated areas of upstate New York.

Jacobson and co-researchers published their results in an article titled "Evaluating the Impact of Legislation Prohibiting Hand-Held Cell Phone Use While Driving," which will appear in a forthcoming issue of the journal Transportation Research Part A: Policy and Practice.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Now, we do not want to sound like know it all's nor belittle the word of these researchers, but it does seem reasonable to assume that where there are more people using cellphones that banning their hand held use while in motion will result in fewer accidents. Also that the rates of decrease would be greater where there are more cars, more cellphones and more people using both. (Science OnLine)

RESCUE RADIO: FCC SAYS YES TO 97:113 WAIVER REQUEST FROM SONAMA COUNTY HEALTH SERVICES

The waivers to Section 97:113 of the Amateur Service rules to permit paid employees to take part in disaster training exercises continues. This with a February 16th letter from the FCC granting a request from the County of Sonoma Department of Health Services in Santa Rosa, California to utilize about a half dozen hams in its employ to take part in monthly radio-check disaster preparedness drills. Specifically, the FCC says that the County of Sonoma Department of Health Services can use the services of the ham radio volunteers in its employ. This for events slated for on March 10, April 14, May 12, June 9, July 14, August 11, September 8, October 13, November 10, and December 8th of this year.

The County of Sonoma Department of Health Services filed the waiver request for these exercises back on November 25th, 2009. In granting the request the Scot Stone, who is the Deputy Chief of the FCC's Mobility Division concluded that the waiver request was appropriate under the circumstances presented. Each drill is scheduled to last two hours. (FCC)

**

ENFORCEMENT: COURT TO RE-EXAMINE WARDROBE MALFUNCTION FINE

A federal appeals court says that it will re-examine the FCC fine it threw out against CBS over Janet Jackson's "wardrobe malfunction" during the 2004 Super Bowl halftime show. The 3rd U.S. Circuit Court of Appeals in Philadelphia issued a statement on Tuesday, February 23rd saying that it will consider whether the FCC's $550,000 fine against the broadcaster over the breast-baring performance was a punishable violation of the Commissions rules.

In 2008 the lower court threw out the penalty saying the FCC acted arbitrarily and capriciously in issuing the fine for the half-second of nudity. However in 2009 the Supreme Court on appeal from the FCC ordered the lower court to consider reinstating the fine, following a ruling in another case that said the FCC could threaten fines even for fleeting profanity. (Published news reports)

**

RESTRUCTURING: A SNEAK PEAK AT THE FCC NATIONAL BROADBAND PLAN

With the FCC scheduled to deliver its long awaited National Broadband Plan to Congress next month, the FCC released a sneak preview of the plan. It reveals what can best be described as a group of sweeping and ambitious proposals it hopes Congress will support.

The recommendations released in a 56 page report cover a variety of proposals ranging from efforts to spur job creation and improve energy independence to improving healthcare and controlling its costs. The plan also calls for constructing an interoperable nationwide wireless public safety network.

Other proposals seek to improve the delivery of education services and enhance government performance. The preview document provides details of what may be included in the massive report the FCC plans to deliver to Congress on March 17th. (Information Week)

ELECTRONIC HAPPENINGS: ALL LION BATTERIES MAY BE BANNED FROM CHECKED AIRLINE BAGGAGE

Traveling by air with spare Lithium Ion batteries for your H-T could soon become impossible. This as Computer World reports that the United States Department of Transportation may prohibit the transport of all spare batteries in checked luggage, regardless of their physical size or capacity.

Lithium-ion cells rated at 100 watt-hours and smaller were previously exempt, but new proposed rules would eliminate the exception. The tighter rules would affect smaller professional video cameras along with a host of consumer electronics devices, from the P-D-A's to audio players and even some hearing aides. Basically any device that uses Lithium Ion cells as a power source.

Computer World dug further into incidents of Lithium Ion battery-related accidents reported on aircraft. It found that based on the number of batteries shipped, injuries during a flight due to battery-related accidents were about one in 28 million in 2008. While not very many in number, still enough percentage wise to concern the Department of Transportation and likely prompt the proposed ban. (Computer World, TV Business, others)

NAMES IN THE NEWS: KURDISTAN DXPEDITION NEEDS MORSE OPS

Some names in the news. First up is Paul Ewing, N6PSE, who says that he has several open positions for C-W operators on the DXpedition team headed to Kurdistan in April. Ewing says that costs for this DXpedition are quite reasonable and they will be operating from a very safe and secure facility. Anyone interested in joining the DXpedition team may contact Ewing directly by e-mail to paul (at) n6pse (dot) com or check out the website at www.yi9pse.com. (GB2RS)

**

NAMES IN THE NEWS: W1RFI TO SPEAK IN MASSACHUSETTS

Ed Hare, W1RFI, will be making a trip to Massachusetts on March 24th to do a special presentation before the Minute Man Repeater Association. Hare, who heads up the ARRL lab will do a presentation on the work performed there. The gathering will take place at the Massachusetts Emergency Management headquarters building on route 9 in the city of Framingham.

(K1IW)

**

NAMES IN THE NEWS: RANT HOPPER, KB7WSD, APPOINTED NORTHWESTERN DIVISION VICE DIRECTOR

And ARRL President, Kay Craigie, N3KN, has appointed Grant Hopper, KB7WSD, as the new Northwestern Division Vice Director. Hopper of Everett, Washington, is an attorney and serves as an ARRL Volunteer Counsel. He and his father both received their licenses as the result of attending a license class put on by the Boeing Employees Amateur Radio Operators North. Society. The Vice Directors position became vacant when no one submitted the necessary election materials needed to run for that position. (ARRL)

**

THE SOCIAL SCENE: RADIO EXPO 10 IN NEEW ZEALAND

And turning to the ham radio social scene, this for our listeners down-under. The annual Wellington Region EXPO-10 is to be held on Saturday March 27th at the Knox Church Hall, in Lower Hutt. Top line exhibitors include Icom along with Signals New Zealand which represents Yaesu Vertex Standard. Doors open to the public at 10am. Admission is $4 New Zealand and includes a free drink and entry into the various raffle draws. The major prize is a dual band handheld supplied by by Foxtrot Communications. This years emcee is none other than Amateur Radio Newsline's own Jim Meachen, ZL2BHF. Reservation information is on-line at www.nzart.org. (NZART)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

THE CHANGING OF THE GUARD: BILL GORDON -DESIGNER OF ARECIBO RADIO TELESCOPE - SK

The designer of the giant radio-telescope at Arecibo, Puerto Rico, has passed away. This with word that astronomer and engineer who Bill Gordon, who designed the array that spotted the first planets beyond our solar system and lakes on one of Saturn's moons died February 16th in Ithica, New York, at age 92.

Gordon designed the Arecibo Observatory's radio telescope in the 1950's as a 1,000-foot-wide dish set in a sinkhole surrounded by forested hills. Within a year of opening, it was used to determine the planet Mercury's period of rotation.

After radio pulsars were discovered in 1967 the observatory played a prominent role in studying their properties Astronomers Joseph Taylor, K1JT, and Russell Hulse used the Arecibo telescope to discover the first binary pulsar in 1974 and leading to their 1993 Nobel Prize in physics. In 1990, Polish astronomer Aleksander Wolszczan used the telescope in the discovery of a pulsar in the constellation Virgo that was shown to be orbited by the first known planets beyond Earth's solar system.

Bill Gordon was born in Paterson, New Jersey. He earned a bachelor's degree from Montclair State Teacher's College, a master's degree from New York University and his doctorate at Cornell. He was a professor and administrator at Rice University in Texas from 1966 until his retirement in 1985. (Southgate, others)

EMERGING TECHNOLOGY: HIGH EFFICIENCY ORGANIC SOLAR CELLS DEVELOPED

Scientists at the Department of Microsystems Engineering and the Freiburg Materials Research Center have succeeded in developing a method for treating the surface of nanoparticles which greatly improves the efficiency of organic solar cells. The researchers were able to attain an efficiency of 2 percent higher than previously expected by using so-called quantum dots composed of cadmium selenide.

Organic solar cells belong to the so-called third generation of solar cells and are still in the developmental stage. The world record for purely organic solar cells in which both components of the photoactive layer consist of organic materials is currently at 7 percent through wet chemical methods.

Organic solar cells have many advantages over the conventional silicon cells typically used for large-scale energy production. Not only are they are considerably thinner and more flexible but are also less expensive and quicker to produce. As such, they are well suited for powering everyday devices which are not in constant use such as sensors or electrical appliances.

The procedure to produce these new cells has been patented and the results were published in a recent issue of the journal Applied Physics Letters. (ScienceDaily)

WORLDBEAT - USA: W1AW ANNOUNCES NEW SCHEDULE FOR DIGITAL BULLETIN TRANSMISSIONS

The ARRL says that beginning Monday, March 15th tat its W1AW digital bulletin transmissions will alternate the modes used. While Baudot, PSK31 and MFSK16 still make up the digital mode complement, Station Manager Joe Carcia, NJ1Q, says that the schedule will be altered to give more exposure to PSK31 and MFSK16.

The digital bulletin times remain at 6 and 9 p.m. daily Eastern Time. More on this change is on-line at www.arrl.org/news/stories/2010/02/16/11343/?nc=1 (ARRL)

**

HAM RADIO IN SPACE: ARRISAT DESIGN MEETING HELD IN ORLANDO

Turning to ham radio space related news, word that an ARISSat Design Review meeting was held in Orlando, Florida on February 15th and 16th. The gathering was reportedly successful in identifying areas that need additional work and definition. The major items are the Max Power Point Tracker, the interconnect board, finding ways of creating a warmer environment for the battery and power management software and internal housekeeping software. Thirteen members attended the meeting and gave 23 presentations concerning the status of ARISSat-1. Links to the presentations will be posted soon. See: http://www.amsat.org/amsat-new/index.php (ARISS)

**

HAM RADIO IN SPACE: COLLEGE SATELLITE NIGHT

Something new on the ham sats for those in institutions of higher learning. College Satellite Night is planned for all available satellites on the first Thursday of each month. College club stations should consider on being on AO51, SO50, AO7, VO52, HO-68 and FO-29 to welcome student operators and enjoy QSO's with them. It's a great way to introduce newcomers to the fun of working the ham radio birds.
(ANS)

**

HAM RADIO IN SPACE: SCOTLAND ON ALL THE HAMSATS

Scotland is going to the birds, at least figuratively speaking. This as 2E1EUB will once again be active as 2M1EUB from March 20th to the 27th operating every ham radio satellite that he can reach from the Cairngorms National Park. Also, look for him on 160 and 80 meters. Checkout QRZ.com under 2M1EUB for more information on this high in the sky operating event. (OPDX)

**

HAM RADIO IN SPACE: SATELLITE OPERATION FROM THE DRY TORTUGAS

And still with our eyes to the sky, word that the upcoming K4T DXpedtion to the Dry Tortugas web page says the team plans to include satellite operations. Team leader Mike Forsythe, AC2V says that one of the primary stations will be dedicated to satellite operations on a 24 hour basis. Mark Hammond, N8MH will be heading up K4T satellite operations. The The DXpedition is slated for March 11th to the 15th. More information and QSL routing is at aroadventures.org. (via e-mail)

**

ON THE AIR: THE REVERSE BEACON NETWORK

More down to Earth, a new amateur radio reverse beacon network has been established as a new way to observe and report on propagation conditions world-wide. Unlike the most DX alerting beacons that transmit at set time intervals the reverse beacon network relies on volunteer stations to monitor various bands and report what they hear over the groups website.

Currently, there are a few dozen stations involved. Some monitor around the clock while others up only occasionally. More on the network, how it operates and how you can become a part of it is on line at www dot reversebeacon dot net. (Southgate)

**

ON THE AIR: A FERRY GOOD IDEA

And you might also want to listen out for special event call GB2EI standing for Great Britain to Ireland. Its on the air to celebrate the reintroduction of the Swansea to Cork Ferry service. The original service commenced in 1896. A similar station, EI2GBW, will also be operating from Cork. Both special event callsigns will be operational until March 31st of 2010. QSL details are available at qrz.com. (Southgate)

**

DX

In DX, word that UA3DJY, who was has been operating as 5I3A from the DIT Communications Club station in Dar Es Salaam, Tanzania, has finally received his own callsign. He is now active as 5H3ACR and will be there until March 1st and says that he will try to be active on all bands. QSL via RK3AOL.

A DXpedition is being planned to operate from the Laguna Grande de la Sierra, Columbia. The callsign will be 5K7SNC. Announced dates are April 1st and 2nd on 7140 kHz only. QSL via HK3OCH. For more details and possible updates please visit QRZ.com under the callsign 5K7SNC.

IK5ZUI, will be active as 5R8UI from Nosy Be Madagascar starting early March. He will be there up to a year. No QSL information as we go to air.

DJ7RJ will be active portable SV5 from the island of Kos through March 17th, He is operating 160 through 6 meters using CW and SSB, QSL direct to his home call.

HA5AO, will once again be active as 7P8AO from Lesotho between March 8th and the 22nd. His operation
will be on 80 through 10 meters using CW, SSB and RTTY. QSL electronically via Logbook of the World or via HA5AO direct or through the bureau.

UX4UL will be active as 8Q7IA from the Maldives through May 18th. Activity is mostly CW and PSK.. QSL via UY5ZZ.

A German team of operators will be active from Burundi through March 6th. Operations will be on CW, SSB and RTTY. QSL as directed on the air.

Lastly, members of the Malaysia Amateur Radio Transmitters Society will activate the "Southern Most Tip of the Asia Mainland" between February 26th and the 28th using the call 9M4STE. Activity will be on 40 through 6 meters using CW and SSB. For more details and updates, visit their Web page at dxpeditionmalaysia.blogspot.com.

(Above from various DX news sources)

THE SOCIAL SCENE: A HAM RADIO FAS-DO-DO IN LOUISIANA IN MARCH

And speaking of true ham radio social events, there's one coming soon to Louisiana that you will not want to miss. Newsline's Don Wilbanks, AE5DW, lives near-by and tells us why:

--

It's party time down the bayou! The combined ARRL Louisiana State Convention and 50th Acadiana Amateur Radio Association Hamfest is slated for Friday and Saturday, March 12th and 13th at the Rayne Civic Center in Rayne, LA.. This years special guest is ARRL Headquarters Club Coordinator Norm Fusaro, W3IZ. And as always this event will host the annual Friday Crawfish Boil with the popular Fais-Do-Do and dancing afterwards.

For those who've never been to South Louisiana, a Fais-Do-Do is a party held in the evening after the kids go to bed. "Do do" is Cajun French
slang
for sleep, as in telling the kids to "go do do" and "fais" is a
negative in
Cajun French, so Fais-Do-Do literally means "no sleep".

As the locals say, "you'll pass a good time, cher!"

More on this Louisiana style fun ham radio event is on-line at www dot w5ddl dot org slash hamfest.

From bayou country I'm Don Wilbanks, AE5DW for the Amateur Radio

Newsline.

--

Now this sounds like the kind of ham radio gathering that should be fun all day and all night long. (NA5Q, AE5DW)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson,
KQ6FM, saying 73 and we thank you for listening.

>
>Maybe. It's only been three years.

The no-code-test Technician class license existed since 1991.

>Note that after the changes of 2000, we had three years of growth, and
>then four years of decline. Hopefully that pattern won't repeat, and
>the growth will continue.

The growth of USA amateur radio licensing has been miniscule since 2006. Using www.hamdata.com statistics for the period of 18 May 2006 through 18 Nov 2009, there were a total of 95,465 NEW licensees and a total of 95,702 EXPIRATIONS. That is from referece material for an e-ham.net article published at the endof 2009.

>But also note that the predictions of lots of growth have been
>unwarranted as well.

I have yet to see a specific quote from anyone who "predicted lots of growth." At best there were a few who optimistically wanted more growth. I was not one of those nor in the habit of "predicting" anything, only trying to show TRENDS.

>The Cold War may have been a factor in the 1950s, but I suspect that
>the oh-wow factor was still very big then. There was also the
>increasing affluence of middle-class Americans plus inexpensive WW2
>surplus and kits to boost amateur radio. Yet during the 1960s, US ham
>radio hardly grew at all.

The "Cold War" existed from 1948 to 1991 and the dissolving of the Soviet Union. The first wide release of WWII surplus electronics to local electronics stores was 1947. There was also the factor of the meteoric rise of Television beginning in 1947, drawing consumer-electronics manufacturers into that market. Even Hallicrafters and National Radio Co. were making TV receivers in that time. By about 1959 established radio makers and many start-ups were entering the Class D CB market which would almost equal TV receiver production.

>> The current growth is due to "good publicity" concerning the
>> role Amateur Radio has in emergencies.
>
>Certainly a factor, but not the only one. Another is the large number
>of baby boomers approaching retirement age. Yet another is the
>maturation of the internet - it's an appliance now, not the golly-whiz-
>bang new thing of a few years ago.

The Internet went public in 1991, 19 years old, not "a few years ago". Compuserve and other network message providers were in existance before the Internet and Personal Computers were in existence on them by 1978 (text-only for the most part).

Back in 30 December 1990 Richard Hoffbeck, N0LOX, made a study of the amateur radio license classes and ages as of the FCC database of November 1988. That data was sent to Fritz Anderson, WT9T (no relation) over what I think was Compuserve (or another network). Both N0LOX and WT9T were in the FCC database as of 13 Dec 2009. Of the (then) 5 classes in the USA, the average age of Novices was 42.19, the oldest average age was Advanced with 56.26. The total number of licensees was 480,191 in Nov 88. Note: A birthdate was required by the FCC in 1988.

>Plus there are so many different things to do in ham radio today!

Except that the code test for all licensees except the no-code- test Technician was KEPT until 23 Feb 07 and the Technician class currently has the GREATEST population of all despite its start in 1991.

>> As long as we don't come across as a bunch of buffoons or
>> cranky old men, we should continue to grow.
>
>Hopefully. Another thing that's needed is continued publicity.

Publicity isn't generated by sitting around in amateur radio venues congratulating one another. There is MINISCULE publicity generated in mass media to inform the PUBLIC. New licensees aren't all coming from "ham families." Hobbyists in electronics are enjoying all sorts of activities besides amateur radio. One out of three Americans have cell phones, one out of five has some Internet access. Both of those can reach around the world (or in the neighborhood) 24/7. They don't need to out-guess the ionosphere to use a 160-year-old telegraphic technique.

The ARRL has existed since before WW One yet it has not caused a blip
in any Mass Media TV or Radio markets with all of its "prepared
high-quality broadcast material." Look in cable TV program listings.
Most of us in the Public are asleep in the 1 AM to 6 AM "public
service" time slots.

>But we're still not keeping up with the growth in the US population.
>Yet.

USA amateur radio license numbers are STATIC, essentially un- changing
down in "statistical noise" or random variations.

IARU Region 2 and Radio Club de Chile Request Amateurs to Keep Emergency Frequencies Clear (Feb 27, 2010) -- A massive 8.8 magnitude earthquake hit Chile today at 0634 UTC, triggering a potential tsunami. IARU Region 2 and the Red Chilena Nor Austral de Servicio (RECNA) have suggested Amateur Radio operators monitor the following emergency communications frequencies for traffic pertaining to the earthquake and tsunami: 3.738, 3.750, 7.050, 7.100, 14.200, 14.350, 21.200, 21.350, 28.300 and 28.500 MHz. IARU Region 2 Area Emergency Coordinator Jorge Sierra, LU1AS, reports that there is now traffic at frequencies of 40 meters from people seeking information from people in Chile: �We would appreciate if amateurs would leave free the frequencies used by RECNA, as well as the usual IARU Region 2 frequencies on in 20, 40, and 80 meters.� In addition to the above frequencies, you may also want to listen to the worldwide emergency communication Center of Activity frequencies: 14.300, 18.160 and 21.360 MHz. Other suggested monitoring frequencies are 3.720, 7.045 and 7.060 MHz. Hawaiian Amateur Radio operators on the lookout for a possible tsunami are monitoring 7.088 and 3.888 MHz.   -- Thanks to Radio Club de Chile�s (RCC) Emergency Coordinator Aldo Oppici, CE3WAD, and W2VU, KI6SN, K3ZO, PY2ZX, PY5YA and El Grupo Argentino de Radiotelegrafia for the information.

"Engineered metamaterials enable remarkably small antennas"

Check this out. Although the experiments were, um, conducted at UHF, I wonder if this development will have any implications for future HF antennas, especially for those who have to live with CC&R's!

http://www.physorg.com/news183753164.html

The text is provided below.

Howard N7SO

NIST engineers are working with scientists from the University of Arizona (Tucson) and Boeing Research & Technology (Seattle, Wash.) to design antennas incorporating metamaterials�materials engineered with novel, often microscopic, structures to produce unusual properties. The new antennas radiate as much as 95 percent of an input radio signal and yet defy normal design parameters. Standard antennas need to be at least half the size of the signal wavelength to operate efficiently; at 300 MHz, for instance, an antenna would need to be half a meter long. The experimental antennas are as small as one-fiftieth of a wavelength and could shrink further.

In their latest prototype device, the research team used a metal wire antenna printed on a small square of copper measuring less than 65 millimeters on a side. The antenna is wired to a signal source. Mounted on the back of the square is a "Z element" that acts as a metamaterial�a Z-shaped strip of copper with an inductor (a device that stores energy magnetically) in the center (see photo).

"The purpose of an antenna is to launch energy into free space," explains NIST engineer Christopher Holloway, "But the problem with antennas that are very small compared to the wavelength is that most of the signal just gets reflected back to the source. The metamaterial makes the antenna behave as if it were much larger than it really is, because the antenna structure stores energy and re-radiates it." Conventional antenna designs, Holloway says, achieve a similar effect by adding bulky "matching network" components to boost efficiency, but the metamaterial system can be made much smaller. Even more intriguing, Holloway says, "these metamaterials are much more 'frequency agile.' It's possible we could tune them to work at any frequency we want, on the fly," to a degree not possible with conventional designs.

The Z antennas were designed at the University of Arizona and fabricated and partially measured at Boeing Research & Technology. The power efficiency measurements were carried out at NIST laboratories in Boulder, Colo. The ongoing research is sponsored by the Defense Advanced Research Projects Agency.

More information: R.W. Ziolkowski, P. Jin, J.A. Nielsen, M.H. Tanielian and C.L. Holloway. Design and experimental verification of Z antennas at UHF frequencies. IEEE Antennas Wireless Propag. Lett., 2009 vol. 8, pp. 1329-1332

Well, the old saying "you cannot change physics" will still apply.
Getting something to launch energy into space is not that hard, even
dummy loads do that. Making it an efficient process is a bit more
difficult. The ISOTRON antennas do "work" (I own three of them) but
they are really poor devices for launching energy into space (unless
you count heating the attic). They work better than my dummy load,
but not by that much considering what they cost.

Don't we already have 1/4 wavelength verticals that are pretty good at
launching energy into free space? The article says they can cut that
down to 1/5 wavelength. That takes a 10 Meter antenna and makes it
into an 8 meter antenna, what�s the big deal with that?

Does somebody know the maximum efficiency of a 1/4 wave vertical and
how does that compare to 95%? (Even with almost perfect ground
resistance?)

I'm thinking they may have succeeded in making a low resistance
material that cuts down on IR losses, but I got a feeling the advanced
materials will be way to expensive to use for your average HF rig
running 100 W given the efficiency and cost of what we already have.

It's right up around there.

Anyhow, if they have managed to make this antenna extremely efficient, what they must have done is make the RF resistance not become much lower as the physical size goes down. Some other possibilities are that they somehow managed to make the Velocity factor really low, maybe 25 percent.

Seems like once a year or so, some outfit makes some claims like this. A couple years ago it was a University on the east coast announcing a antenna that was so efficient that the original one burned up when they sent a hundred watts through it. I personally think that is speaking to inefficiency, but I'll note that statement was removed from the press release.

I'll believe it when I see it.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan. The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> PUBLIC SERVICE: RADIO CLUB DE CHILE ACTIVE AFTER EARTHQUAKE

On Monday, March 1, IARU Region 2 <http://www.iaru-r2.org/> President Reinaldo Leandro, YV5AMH, spoke via telephone with Radio Club de Chile (RCCH <http://www.ce3aa.cl/>) President Dr Galdino Besomi, CE3PG, regarding the 8.8 magnitude earthquake that struck the South American nation on Saturday, February 27. "He informed me that soon after the earthquake, an Emergency Net was activated in the whole country -- first on VHF and then on HF. All the RCCH Board and club members are actively working in close coordination with civil and military authorities," Leandro posted to the IARU Region 2 e-mail reflector. "Three days after the earthquake, the requests for news about people in the affected areas is one of the main activities occupying the Chilean radio amateurs."

==> PUBLIC SERVICE: HAWAII HAMS SPURRED TO ACTION BY CHILEAN EARTHQUAKE

On Saturday, February 27 -- in reaction to a tsunami warning triggered by the Chilean earthquake -- 60 Amateur Radio operators participated in a tsunami radio net that operated throughout the island State of Hawaii. More than 25 real-time reports from observers around the state were relayed simultaneously to the State Emergency Operating Center (EOC) and the four county EOCs, providing timely information via Amateur Radio on sea level changes to emergency management officials. Read more here
<http://www.arrl.org/news/stories/2010/03/01/11368/?nc=1>.

==> FCC NEWS: FCC SEEKS COMMENTS FOR BLANKET WAIVER TO ALLOW AMATEUR

RADIO IN HOSPITAL EMERGENCY DRILLS

In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- seeking comments if the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored."Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." Read more here.

==> FCC NEWS : FCC DENIES ARRL'S REQUEST FOR DECLARATORY RULING

In 2005, after the State of Florida adopted statutes aimed at pirate broadcasters and making it a felony to make a radio transmission without Commission authorization or to interfere with a licensed public or commercial radio station, the ARRL -- through General Counsel Chris Imlay, W3KD -- filed a Request for Declaratory Ruling (Request) with the FCC, seeking a declaratory ruling on portions of that statute. The ARRL argued that the statute was written so broadly that one could infer that Commission-licensed Amateur Radio stations in Florida would be subject to felony prosecution if their transmissions interfered with broadcast or other radio receivers. In 2006, New Jersey adopted a similar statute and the ARRL's Request was modified to include that state. Five years and one day after the original Request was filed with the Commission, the FCC denied the Request. Read more here <http://www.arrl.org/news/stories/2010/02/28/11365/?nc=1>.

==> FCC NEWS: FCC REAFFIRMS STATEMENT ON ROS

In mid-February, European amateurs first used a new, experimental digital mode known as ROS. On February 23, 2010 -- after FCC review of the original documents provided from the developer's Web site -- the FCC made a statement on ROS. The ARRL supports -- as one of the basic purposes of Amateur Radio -- the experimentation and advancing the technical skills of operators. The development and use of any new mode is exciting to many amateurs, and the League encourage amateurs to experiment within the parameters of the rules; however, the ARRL also reminds US licensees that according to Section 97.307, spread spectrum communications are only permissible in the US on frequencies above 222 MHz. Read more, including what the FCC had to say about ROS, here <http://www.arrl.org/news/stories/2010/03/04/11377/?nc=1>.

==> PUBLIC SERVICE : AMATEUR RADIO OPERATORS WRAP UP COMMUNICATIONS SUPPORT IN HAITI

After the 7.0 magnitude earthquake struck the island nation of Haiti on January 12, many Amateur Radio operators asked how they could volunteer their time and service to assist with communications support. When Project Medishare <http://projectmedishare.org/> -- a partnership between the University of Miami Medical School (UM) and physicians and health officials in Haiti -- needed help with their communications, Amateur Radio operators were quick to respond. According to Jack Satterfield, W4GRJ/AFA4DG, Medishare has constructed several health clinics in Haiti over the years -- all of which were destroyed in the earthquake. "Medishare was able to rapidly deploy medical teams and assets to begin the overwhelming task facing the post earthquake medical needs," he told the ARRL.

"UM Vice President for Facilities and Operations Ron Bogue was the Director in Charge of the Haiti operations. His concern about the unreliable communications caused him to contact Julio Ripoll, WD4R, with whom he has worked for years as the architect for UM Medical facilities. Ron knew that Julio is a ham radio operator and very involved with the National Hurricane Center in Miami and its Amateur Radio station, WX4NHC. Ripoll then contacted ARRL to request help in soliciting volunteers. ARRL immediately sent down an HF Go Kit -- through the ARRL's Ham Aid Program -- and put Ripoll in touch with ARRL West Central Florida Section Emergency Coordinator and Navy MARS Florida State Deputy Director Neil Lauritsen, W4NHL/NNN0TFH. Read more here <http://www.arrl.org/news/stories/2010/03/03/11371/?nc=1>.

==> ARRL IN ACTION : WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, including holding elections for and appointing people to League leadership positions, preparing for WRC-12, legislative actions, providing equipment for communications support in Haiti through the ARRL's Ham Aid program, developing on-the-air events, investigating power line noise and more. This installment covers the month of February. Read more here <http://www.arrl.org/news/features/2010/03/01/11366/?nc=1>.

==> ARRL EXECUTIVE COMMITTEE MEETING AGENDA NOW AVAILABLE

At its January 2010 meeting, the ARRL Board of Directors decided to make the agendas of Board and Executive Committee meetings available on the ARRL Web site. The first opportunity to do so is for the Executive Committee meeting to be held March 13. The agenda is available here <http://www.arrl.org/news/files/20100313_EC_agenda.pdf>.

==> AMATEUR RADIO IN SPACE: A CLOSE ENCOUNTER FOR AMSAT-OSCAR 51

While many in North America were fast asleep Monday morning, March 1, the AMSAT-OSCAR 51 (AO-51) satellite had a potentially dangerous encounter with another spacecraft known as Formosat 3D. OSCAR 51 is a popular Amateur Radio satellite that often functions as a crossband FM repeater, relaying brief conversations over hundreds of miles. Formosat 3D is part of a constellation of six remote sensing microsatellites that collect atmospheric data for weather prediction and for ionosphere, climate and gravity research. Both orbit at an altitude of approximately 500 miles. Read more here <http://www.arrl.org/news/stories/2010/03/03/11373/?nc=1>.

==> W1AW ANNOUNCES NEW SCHEDULE FOR DIGITAL BULLETIN TRANSMISSIONS

Beginning Monday, March 15, W1AW <http://www.arrl.org/w1aw.html>, the Hiram Percy Maxim Memorial Station, will alternate the digital modes used for its digital bulletin transmissions. While Baudot, PSK31 and MFSK16 still make up the digital mode complement, W1AW Station Manager Joe Carcia, NJ1Q, says that the schedule will be altered to give more exposure to PSK31 and MFSK16. "Because of time constraints and the varying lengths of digital bulletins, there were many instances where only Baudot was used," he said. "With the new schedule, amateurs preferring either PSK31 or MFSK16 will no longer find these modes secondary." Read more here <http://www.arrl.org/news/stories/2010/02/16/11343/?nc=1>.

==> SOLAR UPDATE

Tad "The Sun shines hot and the wind blows cold <http://en.wikipedia.org/wiki/Great_Expectations>" Cook, K7RA, reports: The sunspots just keep coming: Two new sunspot groups appeared on March 1, numbered 1052 and 1053. This brings the total number of sunspot groups appearing over the last month at 11. Looking at our 3-month moving average of daily sunspot numbers, the latest for December-January-February is 22.4, for the period centered on January. The 3-month moving averages for the periods centered on July through January were 4, 4, 4.64, 7.1, 10.16, 15.15 and 22.4. The average sunspot number for the month of February was 31, up from 21.3 for January and 15.7 for December. The February average being 8.6 points higher than the trailing three month average (22.4) is a good trend. Look for more information on the ARRL Web site on Friday, March 5, including more news from happy radio amateurs commenting on improved conditions on the higher part of the HF spectrum. The vernal equinox occurs in a little over two weeks, ushering in good spring conditions. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Charles Dickens' Great Expectations <http://en.wikipedia.org/wiki/Great_Expectations>.

==> SILENT KEY : TAPR PRESIDENT EMERITUS DR DAVID TOTH, VE3GYQ (SK)

Dr David Toth, VE3GYQ -- President Emeritus of Tucson Amateur Packet Radio (TAPR) -- passed away Friday, February 26 after a long battle with cancer. He was 55. A resident of Spencerville, Ohio, Toth served as a Director and Executive Vice President of TAPR in the 1980s and was elected President of the organization in September 2005. With his advancing illness, he decided not to stand for re-election last October and was instead named President Emeritus with Steve Bible, N7HPR, taking the reins as TAPR President. Read more here

<http://www.arrl.org/news/stories/2010/03/01/11367/?nc=1>.

==> W1AW NEWS: MARCH W1AW/WEST COAST QUALIFYING RUN SCHEDULE

The March schedules for the W1AW and West Coast Qualifying Runs were inadvertently left out of the March issue of QST. The March schedules for W1AW are as follows: Friday, March 5 at 10 PM EST (Saturday, March 6 at 0300 UTC) for 10-25 WPM and Tuesday, March 16 at 7 PM EDT (2300 UTC) for 10-40 WPM. The West Coast Qualifying run will be transmitted by station K6KPH on Saturday, March 13 at 2 PM PDT (2200 UTC) for 10-35 WPM. The run will be transmitted simultaneously on 3581.5, 7047.5, 14047.5, 18097.5 and 21067.5 kHz.

==> THIS WEEK ON THE RADIO

This week, look for the ARRL International DX Contest (SSB) <http://www.arrl.org/contests/rules/2010/intldx.html> on March 6-7. The Wake-Up! QRP Sprint is March 6 and the DARC 10 Meter Digital Contest is March 7. The CLARA HF Contest is March 9-10 (continuing on March 13-14) and the CWops Mini-CWT Test is March 10-11. Next week, the Feld Hell Sprint is March 13. The RSGB Commonwealth Contest, the Elecraft QSO Party and the Idaho QSO Party are March 13-14. The North American Sprint (RTTY) and the SKCC Weekend Sprint are March 14. The Wisconsin QSO Party is March 14-15 and the NAQCC Straight Key/Bug Sprint is March 18. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL RECOGNIZES: PAUL CHRISTENSEN, W9AC, WINS FEBRUARY QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for February is Paul Christensen, W9AC, for his article "An SWR Null Meter." Congratulations Paul! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the March issue by Wednesday, March 31.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, March 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, April 2, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

There are only a few days left to nominate individuals and clubs for the Hamvention 2010 awards. While the Special Achievement Award, Technical Excellence Award, and Amateur of the Year Award have been given for many years, Awards Chairman Frank Beafore, WS8B, said this a year a special award with be given for Club of the Year. That award is tied to this year's Hamvention theme, Amateur Radio Clubs Worldwide: The Lifeline.

March 15 is the deadline for nominations for all four awards and winners will be notified in April and publicly honored at Hamvention 2010 in May. Information on how to nominate for these awards is available at www.hamvention.org <http://www.hamvention.org>. This is an opportunity recognize that individual or club for efforts in behalf of amateur radio.

Amateur Radio Newsline(tm) Report 1699 - March 5, 2010

Now, Amateur Radio Newsline report number 1699 with a release date of Friday, March 5th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds to an earthquake in Chile and a tsunami it causes across the Pacific Ocean. Find out the details on Amateur Radio Newsline(tm) report number 1699 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CHILEAN HAMS ACTIVATE FOLLOWING FEBRUARY 27 QUAKE

Radio Club de Chile President Dr Galdino Besomi, CE3PG says that hams in Chile took to the air shortly after a magnitude 8.8 earthquake that rattled his nation in the early morning hours of February 27th. Norm Seeley, KI7UP, has the latest:

--

In a March 1st telephone conversation with IARU Region 2 President Reinaldo Leandro, YV5AMH, Dr. Bensomi said that soon after the earthquake hit, an Emergency Net was activated across the entire country. Initial activation was on VHF followed by nets on the HF bands.

CE3PG says that all Radio Club de Chile members are actively working in close coordination with civil and military authorities. Also that requests health and welfare news about people in the affected areas is one of the main activities occupying the Chilean radio amateurs these days.

As we reported in last weeks breaking news bulletin, the massive 8.8 magnitude shaker caused widespread devastation across Chile. It also triggered a tsunami alert from the West coast of North and South America to as far away as New Zealand, Australia and the nations of the Pacific Rim..

Ham radio will likely be involved in post quake disaster communications for some time. The IARU Region 2 and the Chilean national ham radio society have requested that monitor a number of emergency communications frequencies for traffic pertaining to the earthquake and its aftermath. These are 3.738, 3.750, 7.050, 7.100, 14.200, 14.350, 21.200, 21.350, 28.300 and 28.500 MHz.

In addition to these frequencies, hams may also want to listen to the worldwide emergency communication Center of Activity frequencies. These are 14.300, 18.160 and 21.360 MHz. Other suggested monitoring frequencies are 3.720, 7.045 and 7.060 MHz.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

As we go to air, the Chilean government confirmed 799 people had been killed by the quake, and at least 2 million made homeless. But that number could rise because others including tourists camping on the coast may have been dragged out to sea by the 40ft-high tsunami that followed. (Various Sources)

**

RESCUE RADIO: HAWAII HAMS WERE PREPARED TO FACE TSUNAMI

The shaker that caused massive devastation across Chile also triggered a tsunami alert from the West coast of North and South America to as far away as New Zealand, Australia and the nations of the Pacific Rim. One of the first places to go on tsunami watch was Hawaii. Bill Pasternak, WA6ITF, has been following that part of the story from our newsroom in

Los Angeles:

--

"Did I hear any more stations trying to check in, KH6IB with the emergency response communications net for the impending tsunami headed into Honolulu as well as the Hawaiian Islands and actually California."

--

That's the voice of Ralph Young, KH6IB, who was part of a Hawaii state wide tsunami alert on Saturday, February 27th. This as some 60 Hawaiian hams participated in a tsunami radio net that operated throughout the island state. Over two dozen real-time reports from observers around the state were relayed simultaneously to the State Emergency Operating Center and the four county EOC's. Reports like this one provided up to the minute information on sea level changes to emergency management officials.

--

"Just an update from the Big Island of Hawaii. Its been reported the water is receding in Hilo too on the breakwaters as well as on a couple of the beaches. I'm on the Southern end and that's the report from Hilo, Hawaii. Back to net, KH6RFB."

--

Ron Hashiro, AH6RH, is the Hawaii State Civil Defense ARES and RACES Coordinator. He says that emergency managers in his state have long been preparing for a tsunami from Chile. Planning began in 1960 shortly after an earthquake in Chile created a tsunami that all but destroyed the city of Hilo on the Big Island.

According to AH6RH, the 14 hour travel time for the tsunami to reach Hawaii provided ample time for radio amateurs to put in place their response plan.

Hashiro said that activity started on Friday, February 26 when key Amateur Radio operators were alerted to the 8.8 magnitude earthquake in Chile. Then he and Kevin Bogan, AH6QO began receiving messages from the Pacific Tsunami Warning Center that lead to the activation of RACES and ARES. Coordination was handled on radio via the AH6CP UHF repeater. Also utilized were text messages, phone calls as well as postings to Facebook and tweets on the Twitter social networking websites. But it was mobile operations over the state wide repeater network that Hashiro said would prove to be of the greatest value as the tsunami approached:

--

"We were very fortunate with the tsunami net during this event because both islands have exempted amateur radio from their mobile cellular telephone bills. As a result hams can still operate with their radios in their vehicles and it was that element that provided real time reporting to the state EOC"

--

Radio operations began with the sounding of the warning sirens across the state at 6 AM. The 6:01 AM net was a bulletin-only with instructions for starting operations at 7 AM. Meantime, amateur radio operators reported to the State and County EOCs. Hashiro, Robin Liu, AH6CP, and Mitch Pinkerton, KH6MP, were stationed at the State Civil Defense EOC in Diamond Head crater From there they operated nets on the State RACES VHF Repeater network and 7.088 MHz on 40 meters.

The state-wide tsunami net commenced operation at 10:45 AM with check-ins and position reports. Everything was ready for the tidal surge. When it began, so did the reports from the hams in the field:

--

"The water is still receding on the Big Island of Hawaii in Hilo. Its going back out again and going out more this time than it did the first time and we've heard that the Marquises Islands have been hit with a 6 foot wave."

--

As the event continued, hams traced the ocean changes around the Big Island, then to the harbors and rivers on Maui, Oahu and Kauai. Receding water levels on the order of 2 to 6 feet were reported as the various waves moved through the island chain. And as the hours passed the hams also passed along other information including one dealing with the water supply on one of the islands:

--

"They have turned off all the water to Hilo as well as Kona, I think as a precautionary measure so that they don't get contamination. So they have shut down all the water to both of those cities. Back to net, Ill be monitoring. KH6RC."

--

According to AH6RH check-in nets were run at the top of each hour to monitor the availability of operators and their locations. Thankfully the tidal surge was minimal. As a result, real-time reporting ended at 1:08 PM and the tsunami warning for Hawaii was canceled at 1:38 PM.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles

--

Ron Hashiro AH6RH, says that Hawaii State Civil Defense Vice Director Ed Teixeira was extremely pleased and grateful for these reports and extended his thanks to the Hawaiian amateur radio community for another outstanding job well done. (ARNewsline(tm), AH6RH)

**

BREAK 1

Coming to you this week from Los Angeles, California and Auckland, New Zealand we are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB0QXW repeater serving Saint Louis, Missouri.

(5 sec pause here)

**

RESCUE RADIO: SOCAL HAMS READY BUT NOT CALLED OUT FOR TSUNAMI

While public officials in Hawaii were in full alert for the Chilean earthquake generated tsunami, the same cannot be said for the political leadership in Southern California. This according to Gordon West, WB6NOA, who says that after all the hours of training volunteers in the various cities that comprise the Southern California region, not one politician nor their staff members had the courtesy to let them know what was going on:

--

West: "We had ham radio operators in Dana Point, Newport Beach, Huntington Harbor, Catalina Island, Long Beach Harbor, L.A. Harbor. Hams were all over the place but no one to make a report to. The hams were not mobilized in Southern California, and that seems strange because here in Southern California we've offered a lot of free classes to municipalities wanting to get their CERT groups going in disaster preparedness."

--

West speculates that the uncertainty over the use of volunteers caused by the FCC's strict interpretation of rule 97.113 might be one of the reasons that the political leaders shied away from calling out or using the services of ham radio volunteers:

--

West: "Well, maybe it was 97.113 and the worry by cities that this would be an exercise that the FCC might not approve. This was not an exercise. This was an actual tsunami with the waves coming into the Los Angeles area."

--

Even though there was no official callout some Southern California's rescue radio hams took the initiative to use the event as a training exercise. Some nets did put themselves into operation and properly equipped operators like Jason Gant,W6AUX, on Catalina Island were able to provide accurate tidal surge reports. Reports that sadly went nowhere:

--

"This is W6AUX reporting from Avalon. We had an approximate one foot surge come in at 12:18 P.M. Pacific Standard Time. The tidal situation is that we are two hours from an extreme low tide of minus 1.2 feet so this helped us in managing this very low surge. This is W6AUX, out."

--

According to West, its beginning to appear as if the political leadership of the region really has no idea of the free expert communications talent at their fingertips:

--

West: "They don't realize the resources that the ham operators could bring, such as we had one ham, Richard, K6RBS, that was monitoring the DART Buoys and was giving an up to date count as to how high or not high the tsunami would reach here in Southern California."

--

As we go to air its unclear if any other California, Oregon, Washington, Alaskan or Canadian coastal communities put their ham radio response groups on alert. What we do know is that in Southern California that was not the case.

And less we forget, to hear more of what Gordon West has to say regarding this issue just tune into this weeks RAIN Report, Its on line all this week at www.therainreport.com. (ARNewsline(tm))

**

RADIO LAW: FCC REFUSES TO ISSUE DECLARATORY RULING TO PROTECT HAMS FROM NEW JERSEY AND FLORIDA ANTI PIRATE RADIO LAWS

The FCC has turned down a request filed in 2005 by the American Radio Relay League for a declaratory ruling. One that would have indemnified ham radio operators from prosecution under anti pirate radio laws in two states.

In a letter dated February 25th, the FCC responded to a Request for Declaratory Ruling Request filed by attorney Christopher D. Imlay, W3KD, on February 25, 2005 on behalf of ARRL. In it the ARRL asked the FCC for a declaratory ruling that Section 877.27 of the Florida Criminal Statutes and Section C.2C:33-23.1 of the New Jersey Statutes be preempted by federal law. Both of these statutes make it a felony to make a radio transmission without Commission authorization or to interfere with a licensed public or commercial radio station.

In its filing, the ARRL acknowledged that the statutes were enacted to address unlicensed pirate broadcasting facilities. But the League was concerned that these laws could be applied to Commission-licensed amateur radio stations.

In declining the ARRL request the FCC noted that the Florida legislation has now been in effect for over five years and the New Jersey law has been in effect for over four years. It says that in that time the agency has not received any reports of any amateur operators being prosecuted or threatened with prosecution under either statute.

The FCC decision did leave the door open in case a ham somewhere winds up under the gun of one of these two state laws. It said that the ARRL may file a new petition for declaratory ruling in the event of changed circumstances. Read that to mean its going to take a test case in New Jersey or Florida before the FCC gives any consideration to preempting either state law. (FCC)

**

RADIO SAFETY: FLORIDA MAN ELECTROCUTED INSTALLING ANTENNA TO TALK TO HAITI

A Lauderdale Lakes, Florida, man who was electrocuted on February 28th. This, while trying to install an antenna that authorities said would have been used to communicate with Haiti.

Police spokesman Sgt. Frank Sousa said Mackenson Mareus died when he touched a live power line at a home in the 1100 block of Northwest 18th Court. Police said the antenna Mareus was helping install was intended to set up communication with Haiti.

According to experts in South Florida that is something ham radio operators would be able to do with relative ease. But Mareus was not a radio amateur and according to his cousin Louikenson Arne he did not know what the antenna was for.

Arne said that the 27 year old Mareus, was from Haiti and had lived in South Florida for less than three years. He ran an Internet-based radio station called Radio Tendresse, and the Web site boasted the frequency of 97.7 FM but was not on the air anywhere in the United States.

According to the police report on the accident ham radio operators are supposed to be licensed with the Federal Communications Commission. However it was unclear who, if anyone, held a license to use the antenna and any radio gear connected to it at the time of the accident that took Mackenson Mareus life. (Published news reports)

**

RADIO BUSINESS: GRE TO ASSUME ALINCO SALES AND SERVICE

GRE, Inc, best known as an original electronics manufacturer and Alinco, Inc. have announced an new marketing agreement. One under which G-R-E America, Inc. will distribute, offer customer support, and provide warranty and non-warranty repair for radios and amplification equipment under the Alinco brand for all of North America.

Under the agreement, GRE, Inc. will be the exclusive distributor of Alinco products in Canada, USA, and Mexico and will handle all warranty service and parts orders. GRE will also provide out-of warranty service as will other currently authorized Alinco service centers. (GRE)

**

NEW PRODUCTS: MORSE CODE TIE FOR PILOTS

A new way to learn the Morse code if you fly. Wear it. And no we are not kidding as we hear from Frank Lusa, VK2FJL of the WIA National News has the story from down-under:

--

Aviators have Morse code all tied up. How, Well you might ask? Well it's a neck tie that has the code printed on it.

Presumably pilots can check their tie if they're a bit rusty on the code and want to verify what beacon they're receiving. These beacons transmit a two to five letter callsigns at 5-words per minute. Lets hope that coffee stains do not obliterate too many dits and dahs.

Im VK2FJL reporting for the WIA National News.

--

Now all someone has to make these new aviators Morse code ties, self cleaning. (WIA News)

**

THE SOCIAL SCENE: THE DUTCH NATIONAL RADIO FLEAMARKET MARCH 13

Turning to the international social scene, the Dutch National Radio Fleamarket takes place on March 13th at the Autotron at 's-Hertogenbosch, just off A59 motorway in Holland. The event opens at 9.00 A.M. local time and runs until 15.30. Details can be found on the website at www.radiovlooienmarkt.nl. (GB2RS)

**

BREAK 2

This is ham radio news for today's radio amateur. We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed around the globe by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: DR. DAVID TOTH, VE3GYQ - SK

Some sad news to report. This with word of the February 26th passing of former Tucson Amateur Packet Radio President David Toth, VE3GYQ at his home in London, Ontario, Canada. Toth who was only age 55 served as Tucson Amateur Packet Radio President from 2005 to 2009 and was twice as a member of its Board of Directors. At the time of his passing he held the title of President Emeritus of the organization.

In addition to amateur radio, Dr. Toth's other passions were flying his Piper Twin Comanche and astronomy. He established the London, Ontario, Astronomy Club and served as its president. He was also a member of the Royal Astronomical Society of Canada and belonged to the Lima, Dayton and Columbus Astronomy Clubs.

During his career VE3GYQ traveled to Chile and Australia for NASA to fix telescope problems. He also worked closely with Software Bisque to develop computer programs to operate telescopes.

Dr. Toth graduated from the University of Western Ontario Medical School in 1978. He practiced family medicine in London, Ontario but moved to the U.S. in 1993 to began a career in emergency medicine. He was a partner of Premier Health Care Services, in Dayton, Ohio, and worked at Lima Memorial Health System and St. Rita's Medical Center until the time of his illness. (WB9QZB)

**

CHANGING TECHNOLOGY: SONY TO CLOSE ALABAMA MAGNETIC TAPE PLANT

Call it a true sign of the times. This with word that Sony Corporation plans to close its tape-manufacturing plant in Dothan, Alabama. This as the need for magnetic tape products dwindles to a trickle world-wide.

As recently as five years ago most recording of video and audio was done to tape. But as magnetic disc drives, flash memory and electro-optical recording technology made rapid advances, the need for magnetic tape products quickly declined.

Now it has finally reached a low where the demand for magnetic tape products like those produced at the Sony Dolthan, Alabama, plant has reached the point where keeping it open is no longer economical.

According to Sony, operations at the plant will be phased out starting in April with the closure planned to be completed by September.

The facility was opened in 1977. Termination of its operation will lead to the loss of 300 jobs. (Birmingham News, RW, others)

**

HAMS IN THE NEWS: MATTHEW ARTHUR KA0PQW NAMED TO RECEIVE PRESIDENTIAL AWARD

Some names in the news. Handiham World reports that Matthew Arthur, KA0PQW, of Ellendale, Minnesota, has been selected to receive a President's Volunteer Service Award. Arthur is being recognized for his work with the Community Emergency Response Team in Steele County, Minnesota. That's where he volunteered and handled communications during a flood in 2007.

According to Handiham World, this was a nine hour non-stop stint that lasted until the National Guard could relieve him. During that time he handled traffic into and out of the flood zone, passing messages to authorities in the city of Winona.

Handiham World says that a story on Matthew Arthur's selection to receive the award appeared in the February 18, 2010 edition of the Star-Eagle newspaper that also featured a photo of his well equipped amateur station. KA0PQW is also a Handiham leader and volunteer. (WA0TDA, Handiham World)

**

NAMES IN THE NEWS: DIANA ENG KC2UHB JOINS ARRL PUBLIC RELATIONS COMMITTEE

Diana Eng KC2UHB, well known for her amateur radio articles and videos for MAKE magazine, will be joining the ARRL Public Relations Committee. Eng who is a fashion designer who is known to integrate electronics into the attire she designs says that she is very excited to join the committee because she wants to help connect the maker and hacker community to the ham radio community.

Phil Torrone is the senior Editor of MAKE magazine. He describes Diana Eng as a fashion nerd, hacker, maker and ham radio ambassador. He says that KC2UHB is one of those people who inspire us all to hack, mod, and learn new skills.

Eng herself notes that it is an exciting time because there is a huge growth in the maker and hacker community. She says that it is hip to tinker and that ham radio operators were the original makers and hackers.

Diana Eng maintains her own website. It's a fun place in cyberspace to visit at http://fashionnerd.com/ (Southgate)

**

EMERGING TECHNOLOGY: CHILE QUAKE MAY HAVE SHORTENED THE DAYS

Scientists at NASA say that the 8.8 magnitude earthquake that struck Chile on Saturday, February 27th may have shifted Earth's axis and created shorter days. If their preliminary calculations are correct each day should be 1.26 microseconds shorter/

According to Science OnLine, large earthquakes cause massive amounts of rock to shift and alters the distribution of mass on the planet. That distribution change causes the rate at which the planet rotates to alter and it is the rate of rotation rate determines the length of a day.

Richard Gross is a geophysicist at NASA's Jet Propulsion Laboratory in Pasadena, California. He used computer modeling to determine how the magnitude 8.8 quake that struck Chile may have affected Earth. He found that the quake should have moved Earth's figure axis about 8 centimeters. That shift in axis is what may have lead to the minutely shortened days. (Science Daily)

**

RADIO COOPERATION: ROS FREQUENCIES MOVED ON 20 METERS

ROS is changing channel. Jos� Alberto Nieto Ros, the originator of the new amateur radio data mode ROS, has agreed to move the suggested 20 meter frequencies for this mode to 14.0972MHz and 14.102MHz. This following a mounting number of complaints that the mode was accidentally causing massive world-wide interference to the international beacon frequency of 14.100 MHz.

The original frequencies recommended for the mode had been 14.098MHz and 14.1011MHz. This sandwiched the decades old propagation advisory system between the original frequencies for ROS and making it impossible to hear the beacon propagation broadcasts.

You can find out more about ROS at http://rosmodem.wordpress.com. More about the International Beacon Project at www.ncdxf.org/beacons.html. (Southgate)

**

DX

In DX, we start with word from ARRL Awards Branch Manager Bill Moore, NC1L, that the 3V3S operation from Tunisia and the D2CQ operation in Angola have been approved for DXCC credit. The 3V3S operation took place in 2009 while D2CQ is ongoing.

On the air now is G3LZQ active as 3B9WR from Rodrigues Island through April 2nd. His operation is on all bands 160 to 10 meters, mainly CW, but with a focus on the 160 through 40. Also look for him to be in the

RSGB's 73rd Commonwealth Contest (March 13-14th). QSL via his home callsign.

And lastly, DF7ZS, will be on the air from Madeira Island signing portable CT9. This. between March 24th and the 31st. Activity will be holiday style and will focus on the WARC bands. QSL via DF7ZS. To which we can only add the line: "Have some Madiera my dear." OK. Bad joke unless you know the music of the Limeliters.

(Above from various DX news sources)

**

THAT FINAL ITEM: NEIGHBOR SUES NEIGHBOR OVER ELECTROMAGNETIC ALLERGY

And finally this week the story of a Santa Fe, New Mexico, man who is suing his neighbor because he claims that her cellular telephone, her WiFi and even her lamp dimmers are making him ill. Once again, here is Amateur Radio Newsline's Bruce Tennant, K6PZW, who takes a look at this rather strange case:

--

The Santa Fe Reporter and Huffington Post newspapers says that a New Mexico resident who alleges he suffers from electromagnetic allergies is has filed a tort action against neighbor because she refuses to turn off her home electronic equipment. According to the news stories, Arthur Firstenberg of Santa Fe, has been sleeping at friends' homes or in his car to avoid what he claims are the electromagnetic waves created by his neighbor's cell phone, wireless network, computer, compact fluorescent light bulbs and lamp dimmer switches.

Firstenberg claims that the low-level electromagnetic radiation emitted by cell phones and other modern gadgets makes him, and others sensitive to radio waves suffer terribly. He believes that the side-effects of exposure, include nausea, vertigo, ringing in the ears, severe headaches and body aches. He also credits crippling joint pains, insomnia, impaired vision, impaired muscular control and other ailments to electromagnetic sources.

The suit claims that when Raphaela Monribot moved in next door, she refused to keep her phone, computer and wireless network turned off when not in use. When asked if she could use a landline instead of her iPhone, Firstenberg claims the neighbor flatly refused.

Firstenberg suit demands that a judge to stop his neighbor from using her iPhone, her wireless internet and her laptop charger, saying the radiation has forced him from his home. He also wants $530,000 in damages, including $100,000 for pain and suffering.

The lawsuit was filed January 4th in First Judicial District Court in Santa Fe. Firstenberg's attorney is Lindsay Lovejoy, Jr, who is a graduate of Harvard and Yale, as well as a former Assistant New Mexico

Assistant Attorney General who has argued cases alongside now US Senator Tom Udall. With such a high power attorney, its doubtful that this case will disappear anytime soon.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, In Los Angeles.

--

The battle against WiFi in Santa Fe isn't one Firstenberg is fighting alone. He's part of a group of city residents who are pursuing legal means to remove all WiFi hotspots from public locations because they claim the wireless internet waves aggravate their electromagnetic allergies. NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk in Los

Angeles, I'm Jim Meachen, ZL2BHF, reporting from Auckland, New Zealand, saying 73 and we thank you for listening.

If I might be a little contrary here (only a little)

I would have to say that I really prefer what we are having now, a slow growth, as compared to some sort of tracking of general population growth with ours.

We have some pretty finite operation bandwidth, and if we had a huge number of people trying to operate, it would be pretty bad.

At least for my setup, I turn on the radio and there are a lot of Hams operating. The only empty places are the higher frequencies which are only slowly coming back, and even 80/75 has local traffic during the day. 40 and 20 are pretty wall to wall, and 30 and 15 are busy enough to keep an Op happy.

If we had a lot more Hams getting on the air, it would be worse than contest weekends. We've done fairly good in getting more frequencies to operate on, 60 meters was a mixed success, and 40 opening up a bit is nice. I don't know that there will be much more room to spread out though.

- 73 de Mike N3LI -

Manfred, DL5CC, sent me the following email:

****

Hello OM,

We are a clubstation near Rostock North Germany and very interested to work the award WAS.

It is very difficult to work Nebraska. Nothing in ARRL-DX-Contest 2009 and 2010.

Can you help us with Mail address from active OM in CW 20m with a good rig?

Best 73 - Manfred DL5CC 1st OP on clubstation DL0VV

****

I thought the best way to handle this was to let as many NE CW operators as possible know about it. Please email Manfred at dl5cc@gmx.de and "cc" me to let me know that you are working to set up the schedule.

Nice to be in a state where DX requests us for contacts!

Thanks and 73,
Art, K�AIZ

You may have received this from another source. I thought it important enough to use our section email list to get the word out:

SB QST ARL ARLB008
ARLB008 FCC Seeks Comments for Blanket Waiver to Allow Amateur Radio in Hospital Emergency Drills

In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- seeking comments if the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored." Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer."

Given the public interest in facilitating government-sponsored emergency preparedness and disaster drills, the Wireless Telecommunications Bureau and Public Safety and Homeland Security Bureau have provided a process for requesting a waiver of Section 97.113(a)(3) to permit named Amateur Radio operators to participate in specified government-sponsored drills by transmitting messages on behalf of identified employers. The waiver must be requested prior to the drill, and employees may not transmit amateur communications on their employer's behalf unless the waiver request has been granted by the FCC.

According to AHA, waiver relief should be available for these non-government-sponsored exercises "because it is in the public interest to ensure that hospital communications operate effectively during emergencies." The FCC noted that in its blanket waiver request, the AHA also stated that requiring separate waiver requests would be administratively burdensome on hospitals and the Commission. "AHA thus requests a blanket waiver for hospitals seeking Joint Commission accreditation, until such time as the Commission adopts a final order in response to a forthcoming Notice of Proposed Rulemaking that will seek comment on potential changes to Section 97.113(a)(3)," the FCC said.

"AHA states that hospitals seeking accreditation from the Joint Commission (formerly the Joint Commission on Accreditation of Healthcare Organizations) must prepare an emergency operations plan setting forth how the hospital will communicate during emergencies, and establish back-up communications links (which, among other means of communications, may include amateur radio stations) to communicate essential information if primary communications systems fail," the FCC pointed out in its Public Notice. "AHA states that hospitals seeking accreditation also are required to test their emergency operations plans twice annually."

As such, the FCC has opened up the matter for public comment. Not only are comments in favor of or against the issue of amateur operators -- who are hospital employees -- to participate in emergency drills conducted by hospitals for accreditation purposes that are not government-sponsored welcomed, the Commission is also seeking comments addressing "whether, if blanket relief were to be granted, there would be some benefit from requiring hospitals to provide notice to the Commission concerning emergency drills they perform, and what such notice should entail."

Comments are due by Friday, April 2; reply comments are due no later than Monday, April 19. All filings should reference the docket number of this proceeding, WP Docket No 10-54. In the Public Notice, the FCC noted that this proceeding has been designated as a "permit-but-disclose" proceeding in accordance with the Commission's ex parte rules: "Parties making oral ex parte presentations in this proceeding are reminded that memoranda summarizing the presentation must contain the presentation's substance and not merely list the subjects discussed. More than a one- or two-sentence description of the views and arguments presented is generally required."

Instructions on how to paper file or file electronically are listed in the Public Notice.

I am sorry to report that LB719, the bill to allow storm spotters to use flashing amber lights on their vehicles was "indefinitely postponed" in an executive session of the Transportation Committee.

Here is an email that was forwarded to me by Jim Winney, KD6MXE:

James:

I just spoke with the Transportation Committee counsel about the status of LB719. Unfortunately, the bill was indefinitely postponed during an executive session of the Committee last night. Among the Committee's concerns were how voluntary declarations of "weatherspotter" could be determined and enforced under the language of the bill. I thought that the Nebraska Association of County Officials did a nice job of addressing that issue during the hearing, however, the Committee remained apprehensive about it.

I will talk to Senator Avery about bringing this back in the next session, as I think we can overcome the Committee's concerns with tighter language. Thanks for your interest in this legislation.

Thanks,
Nicole

Nicole Kanne
Legislative Assistant
Senator Bill Avery
District 28
(402) 471.2633

****

I will be working with the people involved to get this bill reintroduced at the next session. In the meantime, we will try to work up an acceptable definition of "weather spotter" and a way to identify them to law enforcement officials.

I'm sorry that the bill didn't make it this time. But we all owe a lot of thanks to the hams and emergency management officials who initiated this process in this session.

That's entirely understandable.

There are two basic kinds of people that put flashing lights
etc. on their vehicles.

1. People that understand the need for visibility to avoid an
   an accident.

2. Those that use any excuse possible to maintain a vehicle
   that can be confused with a public safety vehicle.

It's the people in number 2 that give us a bad name.

```

I know this is only tangentially connected to amateur radio.
But a majority of us still do a bit of bench work now and
then.

I thought this was a perfect use of a soldering iron.

==> LEGISLATIVE AFFAIRS: ARRL REQUESTS SUPPORT FOR S 1755

<http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> Senate Bill 1755 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 introduced in October 2009 by Senators Joe Lieberman (ID-CT) and Susan Collins (R-ME) -- has unanimously passed the US Senate and has been sent to the US House of Representatives for consideration and now sits in the House Committee on Energy and Commerce. The ARRL is asking its membership to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee. S 1755 accomplishes the same things as HR 2160; HR 2160 was introduced in April 2009 by Rep Sheila Jackson Lee (D-TX-18). Since S 1755 has already been approved by the Senate, moving it forward in the House will simplify the process. Click here <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more information, including instructions on how to encourage the committee's leadership to support S 1755.

==> FCC NEWS: FCC SEEKS COMMENTS FOR BLANKET WAIVER TO ALLOW AMATEUR RADIO IN HOSPITAL EMERGENCY DRILLS

<http://www.arrl.org/news/stories/2010/03/04/11375/?nc=1> In February 2010, the American Hospital Association (AHA) filed a request with the FCC for a blanket waiver of Section 97.113(a)(3) of the Commission's Rules "to permit hospitals seeking accreditation to use Amateur Radio operators who are hospital employees to transmit communications on behalf of the hospital as part of emergency preparedness drills." On March 3, the FCC issued a Public Notice -- WP Docket 10-54 -- seeking comments if the Commission "should grant AHA's request for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are

not government-sponsored." Section 97.113(a)(3) specifically prohibits amateur stations from transmitting communications "in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." Instructions on how to paper file or file electronically are listed in the Public Notice. Read more here <http://www.arrl.org/news/stories/2010/03/04/11375/?nc=1>.

==> ARRL RECOGNIZES: BOB SCHROEDER, N2HX, AWARDED 2009 BILL ORR, W6SAI, TECHNICAL WRITING AWARD

<http://www.arrl.org/news/stories/2010/03/08/11383/?nc=1> H. Robert "Bob" Schroeder, N2HX, of Ewing, New Jersey, has been named the winner of the ARRL Foundation's 2009 Bill Orr, W6SAI, Technical Writing Award for his article "Electromagnetic Pulse and Its Implications for EmComm" that appeared in November 2009 issue of QST. The editorial staff commented on Schroeder's article, saying that "the topic of nuclear EMP is somewhat esoteric by itself, let alone discussing its impact on Amateur Radio, yet the author did an outstanding job of making the subject matter understandable even to the relatively non-technical ham. His writing is clear and to the point, offering practical advice not only for EMP mitigation as it applies to the unlikely event of a nuclear burst, but also extending the same principles to mitigation for lightning damage." Read more here <http://www.arrl.org/news/stories/2010/03/08/11383/?nc=1>.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan. The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Read more here <http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> COMING UP IN QST : LOOK FOR YOUR APRIL ISSUE TO ARRIVE SOON!

<http://www.arrl.org/news/stories/2010/03/10/11387/?nc=1> The April issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting -- including the official ARRL Rookie Roundup announcement and a report on how hams responded to the crisis in Haiti -- the upcoming issue of QST has something for just about everyone. You'll find an abundance of technical and general interest articles, as well as monthly columns such as Happenings, How's DX, Hamspeak, Vintage Radio and more. Click here <http://www.arrl.org/news/stories/2010/03/10/11387/?nc=1> to discover what's in store for you in the April issue of QST, the

official journal of the ARRL.

==> FCC NEWS : ADMINISTRATIVE LAW JUDGE SAYS WASHINGTON STATE LICENSEE CAN KEEP HAM LICENSE

In January 2007, the FCC issued an Order to Show Cause <http://www.arrl.org/?artid=7170> to David L. Titus, KB7ILD, of Seattle, Washington, to justify why his General class Amateur Radio license should not be revoked and initiated a hearing process to determine whether Titus "is qualified to remain a Commission licensee" in light of a 1993 felony conviction at the age of 18 for "communicating with a minor for immoral purposes." According to the FCC order, Titus received a 25-month prison sentence for this act, and the Seattle Police Department has identified him as a registered sex offender. On March 9, Administrative Law Judge Richard L. Sippel issued his Initial Decision <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10D-01A1.pdf> -- saying that Titus " has been a law-abiding member of his community for many years" and ordered that Titus' license should not be revoked based on the evidence presented by the defendant and witnesses on his behalf, as well as the FCC's Enforcement Bureau failure to meet the burden of proof necessary for revocation. The FCC has said that The Communications Act of 1934, as amended <http://www.fcc.gov/Reports/1934new.pdf> provides that the Commission may revoke any license if conditions come to its attention that would warrant a denial of the licensee's original application. In the past, the Commission has said that felony convictions, "especially those involving sexual offenses involving children," raise questions regarding a licensee's character qualifications. Sippel's Initial Decision shall become effective "and this proceeding shall be terminated 50 days after its release if exceptions are not filed within 30 days thereafter, unless the Commission elects to review the case on its own motion."

==> FCC NEWS : FCC AMATEUR RADIO ENFORCEMENT CORRESPONDENCE POSTED

The FCC has posted new Amateur Radio enforcement correspondence on its "Amateur Radio Service Enforcement Actions <http://www.fcc.gov/eb/AmateurActions/Welcome.html>" Web page. Laura Smith, Special Counsel in the FCC's Enforcement Bureau, sent a letters to the Sacramento (California) Municipal Utility District and to Northwestern Energy of Helena, Montana; Northwestern Energy also received letters voicing these same matters in March and September 2009. These letters concerned received complaints that equipment operated by these utilities may be causing harmful interference to Amateur Radio operators. Direct all questions about the Amateur Radio Service Enforcement Actions Web postings via e-mail <fccham@fcc.gov> only to the FCC Enforcement Bureau.

==> HINTS AND KINKS: PAINTING LETTERS

This idea comes to us from Dave Price, K4KDP <daveprice@nc.rr.com>, of Goldsboro, North Carolina.

As I get older, I find it is harder to read some of the smaller print on my radios. The ICOM 706 is a good example. The radio connectors are marked ANT 1, ANT 2, MIC and DC 13.8V, just to name a few. These are marked by either raised letters or letters that are indented into the radio housing. I found that if I paint these letters white, they show up much better on the black metal case. There is a fairly easy way to paint the letters white using cotton swabs with wooded sticks.

<http://www.arrl.org/news/files/Price_Paint.pdf> Break off the cotton tip on some of the swabs until you have about six of them with sharp points at the break area. Throw away the cotton tip and use only the wooden stick to paint with. Now spray a small puddle of white paint onto a piece of cardboard. The cardboard will absorb some of the moisture. Just as the paint starts to thicken dip the pointed end of the stick into the paint and then gently tap the paint into the indented area of the radio housing. On raised letters I use the blunt end of the stick, repeating the same process. It is best to use very little paint and repeat the process of dipping into the paint and tapping the paint onto the letters many times (see Figure 1).

You will find you have to replace the stick several times and spray a new puddle of paint when the old puddle gets too thick. You will also need to have some small paper towels and rubbing alcohol close by to quickly clean up any mistakes. I strongly recommend you practice this on some junk metal before attempting this on your expensive radios. I have also used this same trick on unpainted numbers for my Chevy truck 4 wheel drive shift mounted on the truck floor and for my watch bezel to make the unpainted numbers easier to read.

Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint in QST, you will receive $20. Send your hints via e-mail <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address.

==> SOLAR UPDATE

<http://sohowww.nascom.nasa.gov/data/realtime/realtime-update.html> Tad "Here, as I point my sword, the Sun arises <http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=juliuscaesar&Act=2&Scene=1&Scope=scene&LineHighlight=723>" Cook, K7RA, reports: We experienced a bit of a scare this week when four days went by with no sunspots. That's right -- for the first time in three months, we saw more than a single day with a sunspot number of zero. The previous period was back in 2009, November 23-December 8. Until March 6, there were just three days since then with no sunspots, each a bit less than two weeks apart, December 25, January 6 and January 19. On Wednesday, sunspot 1054 emerged in the northeastern

quadrant of the visible solar disc, and just south of the center of the field another sunspot is emerging. Observation via the STEREO mission reveals possibly a third spot that may appear over the eastern limb on Friday or Saturday. Currently STEREO can view a little more than 88 percent of the Sun. Sunspot numbers for March 4-10 were 40, 35, 0, 0, 0, 0 and 12, with a mean of 12.4. The 10.7 cm flux was 81.3, 79.5, 78.3, 76.6, 76.3, 77.9 and 80.3, with a mean of 78.6. Look for more information on the ARRL Web site on Friday, March 12, including more information on emerging spots, as well as some reported unseasonable sporadic-E propagation. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by William Shakespeare's Julius Caesar (Act II, Scene 1)
<http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=julius caesar&Act=2&Scene=1&Scope=scene&LineHighlight=723>.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=ef23lvpmWro> This week, the Feld Hell Sprint is March 13. The RSGB Commonwealth Contest, the Elecraft QSO Party and the Idaho QSO Party are March 13-14. The North American Sprint (RTTY) and the SKCC Weekend Sprint are March 14. The Wisconsin QSO Party is March 14-15 and the NAQCC Straight Key/Bug Sprint is March 18. Next week, the 10-10 International Mobile Contest is March 20. The Russian DX Contest, the Oklahoma QSO Party and the North Dakota QSO Party are March 20-21. The Virginia QSO Party and the BARTG HF RTTY Contest are March 20-22. The Run for the Bacon QRP Contest is March 22 and the SKCC Sprint is March 24. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, March 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, April 2, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1700 - March 12, 2010

The following is a closed circuit advisory and not necessarily for air. With a financial update here is our Producer, Bill Pasternak, WA6ITF:

--
Its been almost two months since I last brought you an update on the financial picture for Amateur Radio Newsline. Well, while its not bleak, its not very rosy either.

But first I and our entire Board of Directors want to thank each and every one of you who has donated to keeping Amateur Radio Newsline going. Especially in this rather hard transition period since Andy's passing.

In our view you are as much a part of the team as those of us who research, write and report the news. And to each of you our heart felt gratitude for your support.

And that brings us to today where a peak at the bank account shows a balance of $482.62. The only problem is that we just paid our long distance service to bill to Verizon of $237.04. Doing the math that will leave us with only 245.58 in the bank and that simply will not be enough to cover the February bills that are due over the next two weeks.

So we once again must turn to you. We will do our part to keep the newscasts coming, but we do need your financial support to make it happen. And it looks as if we need that help rather quickly.

As you know, Amateur Radio Newsline is a 501(c)(3) not for profit corporation and your donations are tax deductible. The easiest way to donate is by Pay Pal. Just go to our website at www.arnewsline.org and click on the link to Pay Pal if you want to donate electronically. Otherwise you can send a check to us at the address you will hear at the end of this weeks newscast.

Whichever way you choose, the all volunteer staff here at Amateur Radio Newsline will be eternally grateful for your support

Now its time for this weeks Newscast. I'm Bill Pasternak, WA6ITF.

--

Thank you Bill. Now, Amateur Radio Newsline report number 1700 with a release date of Friday, March 12th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. The American Hospital Association asks for a blanket waiver covering all employee hams who want to take part in emergency training drills, New Zealand gives its hams spectrum at 500 kilohertz, an FCC Administrative Law Judge rules that the agency cannot revoke a ham radio license for a crime committed years ago and t ham in France hears and records the Mars Express fly-by of the moon Phobos. Hear the sound and find out the details on Amateur Radio Newsline(tm) report number
1700 coming your way right now.

(Billboard Cart Here)

RESCUE RADIO: AMERICAN HOSPITAL ASSN. FILES FOR BLANKET 97.113(a)(3) WAIVER

It's the waiver request to rival all other such requests to permit hams in the employ of hospitals to take part in disaster training drills. Amateur Radio Newsline's Norm Seeley, KI7UP, is here with the details:

--

The FCC has issued a Public Notice in WP Docket 10-54 that seeks comments on weather or not the Commission should grant a request American Hospital Association. This, for a blanket waiver of Section 97.113(a)(3) to permit amateur operators who are hospital employees to participate in emergency drills that are conducted by hospitals for accreditation purposes and that are not government-sponsored.

As most know, last year the FCC began taking a very strict interpretation of Section 97.113(a)(3) of the Amateur Service rules. This rule specifically prohibits amateur stations from transmitting communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. This has already lead to a pair of rules change requests. One filed by educator Gordon West WB6NOA and two other hams. The other from CQ Magazine. Both essentially request that 97.113(a)(3) be changed to permit hams to volunteer their services for any emergency drill conducted by an employer, whether or not the employee is on the clock. And at its January Board meeting the ARRL said it too plans to file its own proposal to modify Rule 97.113(a)(3) as well.

Late last year the FCC began granting waivers to various entities in need of using hams in their employ as a part of emergency preparedness drills. Now, the American Hospital Association says that it is time for a single across the board waiver so that individual hospitals can hold drills without having to file for specific exemptions to 97.113(a)(3).

Comments on WP Docket 10-54 are due by Friday, April 2nd with reply comments are due no later than Monday, April 19th. All filings should reference the docket number of this proceeding, WP Docket No 10-54.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

As we go to air a check of the FCC's electronic comment filing system shows those responding to be about 3 to 1 in favor of granting the American Hospital Association waiver request, but those numbers are subject to change as more comments are filed. (FCC)

**

RADIO LAW: ALJ SAYS FCC CANNOT REVOKE HAM LICENSE FOR PAST CRIME

An FCC Administrative Law Judge has sided with a ham who claimed that the revocation proceeding against his license for a crime committed years ago was unjust. In his March 9th decision, FCC Chief Administrative Law Judge Richard L. Sippel ordered that that the Amateur Radio Operator License of Amateur Radio Station KB7ILD held by David L. Titus should not be revoked and that the License Revocation Proceeding be dismissed. Bill Pasternak, WA6ITF, is in the newsroom with more on what the Administrative Law Judge decided:

--

First some background on this matter. Back in January of 2007 the FCC issued a Show Cause Order to determine whether David L. Titus, KB7ILD, was qualified to remain a Commission licensee. This, in light of a 1993 felony conviction involving a minor and whether his authorization should be revoked. The offense in question took place on April 16, 1993 and he was sentenced to serve 25 months in prison.

At that time the FCC noted that Titus' felony conviction for at least one sexual-related offense involving children raised material and substantial questions as to whether he possesses the requisite character qualifications to be and remain a Commission licensee. It also noted that while the felony conviction occurred more than 10 years earlier that the nature of his criminal misconduct and the fact the amateur radio service is particularly attractive to children called into serious question whether he should be permitted to retain his amateur radio authorization.

Titus decided to move forward with the hearing process and hired noted Washington D.C. attorney George L. Lyon, Jr. to represent him. At the hearing attorney Lyon produced numerous witnesses who testified on Titus behalf. These included a clergyman, a police officer, a corrections officer, a school counselor, a government contractor, a Red Cross worker, and a lab engineer. Each of them attested to Titus' successful integration into the community as a law-abiding citizen. Several of these witnesses are also active in Amateur Radio and approved of Titus' conduct in operating Amateur Radio. There was no rebuttal. Nor was any negative character testimony or other evidence bearing on character offered.

But Titus license was not without challenge from within the ham community. The President of the Lake Washington Amateur Radio Club appeared in person at the hearing. In his testimony he expressed concern that a convicted sex offender, who is licensed, could use his amateur radio station to contact children for immoral purposes. His concern was heightened by the fact that Titus operates a repeater thereby affording wider coverage.

But in his finding, A-L-J Sippel stated there is no evidence of Titus mentoring a minor on ham radio procedures. Nor is there evidence of Titus communicating with a minor through his amateur radio directly or on his repeater frequency. Also, there is no credible or reliable evidence in the record to support
a finding that he would use his FCC license to solicit minors.

Lastly, A-L-J Sippel stated that David L. Titus, KB7ILD has held an Amateur Radio license for 20 years. He added that there is no credible or reliable evidence even suggesting that he ever has used or ever would dare to use ham radio communication as a means to contact minors for illicit purposes.

Administrative Law Judge Richard L. Sippel's decision carries a tag that it is issued "with prejudice." That's a legal term meaning that when a case is dismissed for good reason that the plaintiff - in this case the FCC -- is barred from bringing an action on the same claim.

For the Amateur Radio Newsline, I'm Bill; Pasternak, WA6ITF, in the Newsroom in Los Angeles.

--

The decision in this case runs thirteen pages. You can read the entire text at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10D-01A1.pdf
 or
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10D-01A1.txt (FCC)

BREAK 1

 From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7CCD repeater serving Seattle, Washington.

(5 sec pause here)

**

RADIO LAW: FCC REAFFIRMS ROS ONLY LEGAL ABOVE 222 MHZ

The FCC says that a new digital mode developed in Europe and being used world-wide is not legal for United States hams to transmit below 222 MHz. This because it uses frequency hopping technology which the regulatory which the agency considers to be spread spectrum and bans hams from using below that frequency. Amateur Radio Newsline's Frank Haas, KB4T, has more.

--

According to the ARRL, back in mid-February, European amateurs first used a new, experimental digital mode known as R-O S. On February 23, 2010 -- after FCC review of the original documents provided from the developer's website -- the FCC made the following statements on R-O-S. We quote:

"Section 97.305 is the rule that specifies where different emission types are allowed to be transmitted on different bands. 'R-O-S' is viewed as 'spread spectrum,' and the creator of the system describes it as that. We assume that he knows what he created.

Section 97.305 authorizes spread spectrum emission types defined in Section 97.3 to be transmitted by FCC licensed amateur stations at places we regulate communications only on 222-225 MHz and higher frequency amateur bands. European telecommunication regulatory authorities may authorize amateur stations in Europe to use spread spectrum on the High Frequency bands, but this is of no concern to us.

"The Commission does not determine if a particular mode 'truly' represents spread spectrum as it is defined in the rules. The licensee of the station transmitting the emission is responsible for determining that the operation of the station complies with the rules. This would include determining the type of emission the station is transmitting and that the frequencies being used are authorized for that type of emission." End quote

Since that initial FCC review, several Internet sites have reported a claim -- attributed to the FCC -- that the original statements made had been reconsidered and that the regulatory agency's view was now that -- quote: "R-O-S cannot be viewed as Spread Spectrum and it would be encompassed within Section 97.309 which covers RTTY and data emissions codes."

The ARRL says that when queried about this new statement, the FCC's Consumer Assistance Office stated that -- and again we quote: "The information contained on the R-O-S website was not provided by the FCC."

The agency then reaffirmed the original statements that came from the FCC's Wireless Bureau, which handles Amateur Radio rules for the United States. In other words, as far as the FCC is concerned, the R-O-S mode can only be used by the hams that it licenses on frequency bands above 222

MHz. And that's where it stands with the FCC as we go to air.

For the Amateur Radio Newsline. I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

In its closing statement on the matter, the ARRL says that it supports the experimentation and advancing the technical skills of operators. But the League also reminds US licensees that according to Section 97.307, spread spectrum communications are only permissible in the US on frequencies above 222 MHz. (ARRL)

**

RADIO LAW: ROS CREATOR SAYS HES DEVELOPED A NEW NARROWBAND VERSION

As if this situation was not complicated enough, the creator of ROS, one Jos� Alberto Nieto Ros, has announced the creation of a narrowband version of ROS that requires only 500 Hz. To operate.

He says that a technical description of this new version will be sent to FCC with the aim of gaining the agency's approval their approval for its use in the United States. Until then, the author says that he will not make public any technical explanation about this mode.

But here's where there may be a conflict. In his blog posting he claims that if you are a U.S. citizen, that you are in your perfect right to experiment with this new digital mode, until the FCC says otherwise. What he might not understand is that here in the United States hams must abide by the FCC Part 97 rules currently in place as well as any standing FCC declaration regarding the use of any mode. Also, that violating either could lead to anything ranging from a warning letter to a Notice of Violation or even a monetary fine. So while U-S hams can sit all day and receive and decode using any version of ROS, that they cannot transmit with it until they get a go ahead from the FCC. (Various sources)

RESTRUCTURING: NZ HAMS GRANTED TEMPORARY 600 METER ALLOCATION

Based on a request filed by New Zealand Association of Radio Transmitters that nations telecommunications regulator has agreed to grant New Zealand Amateurs temporary access to a slice of the 600 meter spectrum.

Beginning on March 1st, 505 to 515 kHz has been granted to them on a temporary basis pending an international allocation to radio amateurs and includes some restrictions. These involve a maximum radiated power not to exceed 25 watts effective radiated and a maximum bandwidth of 200 Hertz.

As in other parts of the world where hams have use of this band, these frequencies are, or may be, allocated for use by other services. As such, amateur operators must accept interference from, and must not cause interference to these other services.

On the international scene, work continues to gain a world-wide allocation in this area through the International Amateur Radio Union. If and when this is approved, it is likely that the New Zealand Amateurs will be granted a permanent allocation in the 600 meter area. (NZART)

RESCUE RADIO: TELECOMMUNICATIONS AND BROADCASTING RETURNING TO HAITI

Telecommunications and broadcasting are both slowly returning to earthquake ravaged Haiti. This according to Federal Communications Commission officials who went to Port-Au-Prince in January to assess communications damage and help that country's communications regulators with their restoration efforts.

--

As previously reported here on Newsline, the team was deployed in response to a request from Director General of Conatel, the communications agency in Haiti, in coordination with the U.S. Agency for International Development. In an update delivered to commissioners, FCC staffers Mindel Del La Torre, and Jamie Barnett, detailed the states of Haiti's communications and the ongoing efforts by the FCC to assist.

According to the two officials, hard-wired phones were heavily damaged. There were 108,000 telephone lines in the country in 2008. But the quake lead to a total loss of its wire-line infrastructure and those phones are still not working.

Wireless service fared better in the quake. De La Torre noted that Haiti had 2.5 million cell users before the quake. Now, with new equipment having replaced destroyed cell sites and cellular coverage is nearly back to 100%,

In the area of broadcasting some definite strides have been made. Before the earthquake Haiti had some 50 radio stations and 18 TV stations operating. Now, about 30 radio stations as well as six TV stations are back on the air.

For the Amateur Radio Newsline, I'm Jim, Meachen, ZL2BHF.

--

The FCC has said that it intends to help with the restoration of Haiti's telecommunications and broadcast infrastructure over the long term. Meantime a limited ham radio response is still at work aiding in quake relief efforts. (RW)

RADIO AND THE NET: NEW VERSION OF SDR-RADIO.COM RELEASED

A new version of SDR-Radio.com has been released by developer Simon Brown HB9DR. This is a Windows console for software defined radios developed specifically for the amateur radio and short-wave listener communities and provides a powerful interface for the rapidly growing number of SDR enthusiasts. This free software can be downloaded from www.sdr-radio.com. (SDR-RADIO)

**

NAMES IN THE NEWS: TWO FORMER SPACEHAMS LEADING COMMERCIAL SPACEFLIGHT

Two former space shuttle and space station commanders are now competitors in the start up world of commercial human spaceflight. Ken Bowersox, KD5JDP, and Frank Culbertson, KD5OPQ, are now respectively vice presidents at Space Exploration Technologies Corp. and Orbital Sciences Corporation which are two United States based companies at the forefront of the private space industry.

Space Exploration's Dragon capsule and Orbital Science's Cygnus spacecraft have already been selected by NASA to ferry cargo to the International Space Station starting in 2011. Both companies are now vying for a NASA contract to begin developing vehicles capable of carrying humans to the International Space Station. Commercial providers could take up the job of carrying astronauts to and from the complex if President Obama directs NASA to revamp its current exploration program. (Spaceflight Now)

**

NAMES IN THE NEWS: THREE HAMS ACHIEVE HIGH SPEED CW RECORD

And talk about high speed Morse code. The latest High Speed Telegraphy Honor Roll has been published with three amateurs, LZ4UU, DJ1YFK and EW8VK, achieving an amazing 1231 characters per minute. For full details check out www.rufzxp.net. (Southgate)

HAMVENTION 2010: WEAK SIGNAL DINNER MAY 14th

The 2010 VHF Weak Signal Group Banquet held during the Dayton Hamvention will be on Friday evening May 14th, at the Doubletree Dayton Downtown Hotel at 11 South Ludlow Street, in Dayton. Anyone with an interest in weak signal VHF, UHF and Microwave is invited to attend. Seating is limited to 125 and reservations are required. Cost per person is $35. Reservation requests with full payment and an SASE go to Tony Emanuele WA8RJF, 7156 Kory Court, Concord Township, Ohio 44077-2221. And please include the names and calls of all attendees as well as an e-mail address if you have one. (VHF Group)

**

HAMVENTION 2010: LAST CALL FOR HAMVENTION 2010 AWARD NOMINATIONS
And if you are hearing this before March 15th it means that you only have a few days left to nominate individuals and clubs for the Hamvention 2010 awards. While the Special Achievement Award, Technical Excellence Award, and Amateur of the Year Awards have been given for many years, Awards Chairman Frank Beafore, WS8B, said this a year a special award will be given for Club of the Year. That award is tied to this year's Hamvention theme of "Amateur Radio Clubs Worldwide: The Lifeline."
Judging will begin as soon as the nominating March 15th deadline passes. Winners will be notified in April and publicly honored at Hamvention 2010 in the weekend of May 14th, 15th and 16th.
Information on how to file nominations is on line at www.hamvention.org. Just scroll down and click on the word awards on the right side of the screen. (Hamvention�)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

ON THE NET: NEW F1 MALWARE BUG DISCOVERED IN INTERNET EXPLORER

If you are a Windows XP user, listen up. Microsoft as well as the urban legends research service Snopes dot com both say that Windows XP users should not to press the F1 key when prompted by any website that they might visit. This due to an unpatched vulnerability that hackers could exploit to hijack PCs running certain versions of Internet Explorer. Amateur Radio Newsline's David Black, KB4KCH, has the details:

--

According to Microsoft, the vulnerability exists in the way that V B Script interacts with the Windows Help files when using Internet Explorer. If a malicious website displays a specially crafted dialog box, and if you press the F1 key, an arbitrary code could execute in the security context of the currently logged-on user.

Microsoft says the bug affects Windows 2000, Windows XP and Windows Server 2003. Plus, any supported versions of Internet Explorer on those operating systems could be leveraged by attackers. Users running IE6 on the XP operating platform plus IE7 and IE8 are said to be at risk.

Microsoft says--even if your windows system is up to date with all security patches--you should still avoid pressing F1 on dialog boxes presented from web pages or other Internet content.

The prompt can appear repeatedly when dismissed, nagging the user to press the F1 key. But Microsoft says not to pay attention to this demand and if it persists try closing and then re-opening Internet Explorer. The company says simply avoiding any website where a dialogue box tells you to press F1 is a good idea.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, at the South-East Bureau in Birmingham, Alabama.

--

For those not aware, snopes.com is the Internet's best known urban legend debunking website. If it says that a story making the rounds of the World Wide Web is true, you can pretty much be certain that it is. And our thanks to Hap Holly, KC9RP, of RAIN for bringing this one to our attention. The full story with all reference material is at s.com/computer/virus/f1key.asp (RAIN)

**

RADIO RECORDS: GERMAN HAM CLAIMS 8.97 KILOHERTZ RECORD

An interesting record is being claimed by a German radio amateur. Markus Vester, DF6NM, of Nuremberg has been able to receive his test transmissions on 8.97kHz at a distance of 12.1 kilometers.

According to Vester, the transmitter was a 35 watt car radio audio amplifier offering up an Effective Radiated Power was about 1.3 microwatts using a relatively small antenna with 1.4 Henry loading coil. The receiving system consisted of a six meter long antenna feeding SpecLab software. (Various)

**

HAM RADIO IN SPACE: A CLOSE ENCOUNTER ON-ORBIT

The Amsat Oscar 51 ham radio satellite has survived a close encounter with the FORMOSAT-3 constellation of satellites. The close call took place on Monday, March 1st at 10:56 UTC. This as all of the satellites were over the Eastern United States.

According to AMSAT-NA Vice President of Operations, Drew Glasbrenner, KO4MA, the predicted miss distance was 953 meters, which is over 3000 feet. But the overall but the radial difference between the two orbits was only 39 meters. Given the orbital uncertainties of both satellites, an orbit separated by only 39 meters could mean that distance may become eaten up rather quickly.

As noted earlier, FORMOSAT-3 is a constellation of satellites launched on April 15, 2006. AO-51 is a bit older having been put into orbit on June 29, 2004. (ANS)

**

HAM RADIO IN SPACE: ARISS WINS BOSELLI PRIZE

The Italian radio listeners' society A-I-R has awarded the prestigious 2010 Boselli prize to ARISS, the Amateur Radio in the International Space Station project. In its announcement, A-I-R says that the award recognizes how ARISS has shown the importance of radio communications to hundreds of young students in Europe and beyond. A-I-R says that ARISS has spread the use of radio from the forefront of science in outer space to classrooms around the world. The Boselli prize will be presented at the A-I-R Annual General Meeting on May 8th in Faenza, Italy. (GB2RS)

**

ON THE AIR: UK HAM OPERATION TO HELP SAVE VULCAN BOMBER

Members of Newbury And District Amateur Radio Society in the United Kingdom will be activating GB0VUL during the month of March. This special event is to increase the awareness of the "Vulcan to the Sky Trust" and its efforts to save the only flying Vulcan XH558 bomber.

Operation is 80 through 10 meters using CW and SSB. While activity may take place all month, the main event of the month will be on the weekend of 20th and 21st. QSL via the RSGB Bureau, eQSL preferred or via G8JIP. More information on the Vulcan bomber is at www.nadars.org.uk/vulcan.asp (Southgate)

**

HAM HAPPENINGS: INTERNATIONAL MARCONI DAY AWARDS PROGRAM

The 23rd International Marconi Day will take place on April 24th. Although not a contest, awards can be obtained if you pre register for the event. Also, in order to qualify as an award station, operations should take place from a site that either used Marconi equipment prior to his death in 1937 or from which Marconi carried out experiments during the same period. Full details can be found at www.gb4imd.org.uk. (GB2RS, Southgate)

**

ON THE AIR: FRENCH HAMS CELEBRATE CONVENTION OF HUMAN RIGHTS

On the air, F6FQK reports that members of the "Council of Europe Radio Amateur Club will be active as TP60CE between March 12th to the 14th. This to celebrate the 60th anniversary of the "Convention of Human Rights. Operations will be on CW, SSB, PSK and the Satellites. QSL via F5LGF. An online log search will be available at http://ewwa.free.fr (Southgate)

**

ON THE AIR: CELEBRATING ST. PATRICK'S DAY FROM ERIN'S ISLE

And Ireland's Foyle and District Amateur Radio Club, has been granted the special event callsign GB5SPD to celebrate St. Patrick's Day. The callsign will be used over several days, from March 15th until March 17th.

While most of the contacts will be SSB operators hope to also use digital modes as well. A special QSL card has been printed for the occasion and reports from SWL's are also welcome. More details can be found under GB5SPD on the qrz.com. (IRTS)

**

DX

In DX, word that WE9V will be active as from Jamaica as 6Y9V through March 14th. His activity will be on 160 through 10 with emphasis on 160, 30, 17 and 12 meters using CW, SSB and RTTY. QSL via WD9DZV.

G3RWF as 5X1NH will be on the air from Uganda until March 21st. QSL via his home callsign.

Also from Uganda, 5X7JD will be on the air until 25 May. QSL as directed on air.

HA5AO will be on the air from Lesotho as 7P8AO through March 28th using all modes and bands. QSL only via his home callsign.

DL7AFS and DL7ZG will sign V21ZG from Antigua for 18 days starting 16 March. They will concentrate on RTTY, PSK and SSB. This is another one to QSL as directed on the air.

And 5R8UI will be on the air from Madagascar until the end of the year. QSL to IK4ZUI.

DL7BC, will be active March 27th and 28th from Morocco as CN2BC during the CQ WW WPX SSB Contest. This, as a Single-Op/All-Band/Low-Power entry. QSL via DL7BC.

Lastly, NP3D will be active portable HR2 from Honduras between March 19th and the 29th. He will operate on all of the High Frequency bands using all modes, but will focus on 160 meters. QSL via W3HNK, RW6HS, or via Logbook of the World.

(Above from various DX news sources)

**

THAT FINAL ITEM HAM HEARS AND RECORDS MARS EXPRESS FLY-BY

And finally this week, talk about a true accomplishment for ham radio. This as the European Space Agency website reports that a radio amateur was able to receive and record the Mars Express mission on its recent flyby of the Martian moon Phobos. Bertrand Pinel, F5PL, from near Castelnaudary, France, used his 3.5 meter dish throughout the flyby to monitor the signal from Mars Express. Heres a sample of what he heard:

--

Actual fly-by audio.

--

The recording of the tone of Mars Express shifts from high to low because, at the time of the recording, Mars Express was traveling away from the Earth with a speed of 39 000 km/hr - accelerating as it went. This is the same Doppler effect as the sound of an ambulance siren changing as it passes you.

More on this story and F5PL's complete audio recording is on-line at http://webservices.esa.int/blog/post/7/1058 (Southgate)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

How about posting a photo of your workbench.  From the small sliver of
the workbench visible in this photo, the workbench must look like a
rat's nest.  It's supposed to.

Hi,

I have a question, but first a few things I've been told:

I have a WRT54G that has been modified to operate just slightly off the standard frequency for 802.11g.

It has been loaded with specially built software that allows these devices to form an ad-hoc mesh network.

I'm told that this work was being done by a club in Austin Texas.

Does anybody out there know which club is doing this and/or where I can find additional information about this?

I'd ask the guy I got the router from, but he is currently very ill and unable to respond to my request and Google doesn't seem to be turning up much information that is current. It sure sounds like a useful thing to me.

That wasn't my workbench. However, this is what mine looked
like prior to a move from Los Angeles to Ranger TX.

http://www.grendel.com/shop/Shop%20001.jpg

More messy pictures at http://www.grendel.com/shop

According to Mayflower, the first load was 30,860 lbs. Not
including the forklift. There was another 1/3 of a 53' van
involved bringing the rest of it out here.

Well, that was simple enough. EARCHI had a testing session this AM, and I passed! I've been listening in to a couple of the local repeater nets, getting a feel for local practices and personalities. Now comes decision time...Yaesu or Icom? I'm leaning to the Icom dual band HT's right now.

For the home portable/base, would a mag mount on the corrugated metal carport roof work pretty well (vs. rooftop mag on the car)?

Very smart: listen first, talk later.

> Now comes decision time...Yaesu or Icom? I'm leaning to the Icom dual band
> HT's right now.

Everyone has an opinion.... and of course there are multiple models from each. Others with experience with them might chime in.

> For the home portable/base, would a mag mount on the corrugated metal
> carport roof work pretty well (vs. rooftop mag on the car)?

Either should work well, though the corrugated metal might not give enough of a mechanical grip or enough capacitance for a good RF ground (have I got that right?) ;-) There are three common antenna lengths (that I know of) for mobile antennas: 1/4 wave, 1/2 wave, and 5/8 wave. The 1/2 wave and 5/8 wave antennas will give you a lower angle of radiation (i.e., gain over a 1/4 wave). Your QTH sounds like it's well above Honolulu proper, and you could probably take good advantage of the longer antennas. And if you can see other islands, you shouldn't have any trouble working stations on them, too.

Howard N7SO

Put a cookie tin under the mag mount on the roof, it will stabilize
things.

Both companies make good products, but I suggest you wait a few weeks. Attend a ham club meeting, and tell the members you're looking for a rig: someone may have a loaner you can try out, or even one that they'll part with for a good price to get you started.

If not, there are a lot of used rigs out there, that can be had for reasonable money. Frankly, the trick is to go slowly and build your "dream" station a little at a time, so that you don't spend your whole slush fund on one mode or one rig and then find you don't want to keep using it. Field Day and Emergency Communicaitons drills (EMCOM) are an excellent way to see various modes and rigs in action. If possible, try out all the modes your license covers, and find out if you'd be more comfortable with hilltopping, or packet, or EmCom, or even microwave, or whatever: try _before_ you buy.

> For the home portable/base, would a mag mount on the corrugated metal
> carport roof work pretty well (vs. rooftop mag on the car)?

The only way to know is to try it, so buy an antenna that will work with your car and then give it a chance on the roof. Repeaters make up for most of the antenna issues that used to plague VHF operators, and so long as you're "Full quieting" into the machines you want to use, you win.

If not, tell your XYL that the new DTV standard requires a tower, and go from there. ;-)

73,

Bill, W1AC

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
    2.1 Netiquette guidelines
    2.2 Posting form requirements
    2.3 Guidelines on signature (.sig) files
    2.4 Guidelines on excessive quoting
    2.5 Guidelines on pointers to outside sources
    2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
    2.7 Guidelines regarding name-calling
    2.8 Guidelines regarding civility
    2.9 Other unacceptable topics

---

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

----

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are implied or derived guidelines for participation that are drawn from the above articles about overall Usenet culture and tradition. Two of these implied or derived guidelines are encapsulated in two basic rules that our moderation team uses to initially determine whether an article is appropriate for our newsgroup. They are restated explicitly here for clarification:

Basic Rule #1: The article must be on-topic for amateur radio. A rule-of-thumb that our moderation team applies is whether the article mentions amateur radio, ham radio, some synonym for amateur or ham radio, some technique or practice of amateur or ham radio including closely related technical topics such as antennas or portable power, or regulatory politics that directly affect amateur radio. This rule-of-thumb is also applied to determine if an article in a thread has drifted too far off-topic. For example, articles that have drifted into general rants or monologues will probably be returned with a polite request to rewrite to include a reasonable amateur radio connection or angle.

Basic Rule #2: The article must not have excessive spelling, grammar, or logical argument errors affecting readability and understandability. The moderation team understands that clear, understandable, technical or expository writing is a skill that can only be perfected through a lifetime of focused training and practice. Because the moderation team does not want to hold submitters to a standard higher than what it can achieve itself, nor disrupt the newsgroup and discourage submitters by playing spelling or grammar police, it will only return for rewrite any article that cannot be reasonably understood by multiple moderators.

If it is necessary to return any article for a rewrite because the moderators have determined that it does not meet Basic Rule #1 or #2, please accept this constructive feedback in the manner in which it is intended. The moderation team offers its assistance to help rewrite any submitted article into a form that preserves its original intent and meaning, but is also on-topic, as well as readable and understandable by others.

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing

thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of

moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

  http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

If you are an educator or if you know of one who might be interested in learning more about wireless technology, here is an announcement from ARRL HQ.

73, Art K�AIZ

****

We are currently accepting enrollments for the 2010 sessions of the Teachers Institute on Wireless Technology. Word of mouth has often been our best recruiting method so we invite the ham radio community to recruit teachers in their local schools who would find this opportunity interesting and rewarding.

The Teachers Institute is an exceptional professional development opportunity for teachers who want to explore the fundamentals of wireless technology, basic electronics, robotics and use amateur radio as a tool for learning in the classroom. The four day expenses paid seminar is funded by ARRL Education & Technology Fund donors. Teachers can also apply for graduate credit for the seminar.

The schedule of dates and locations for this year's sessions, as well as an agenda of topics, a downloadable brochure and applications are available on our website at www.arrl.org/ti. If you would like to request copies of the printed brochure, please contact the Education Services Dept. at ead@arrl.org.

> ==> LEGISLATIVE AFFAIRS: ARRL REQUESTS SUPPORT FOR S 1755
>
> <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1>   Senate Bill 1755 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 introduced in October 2009 by Senators Joe Lieberman (ID-CT) and Susan Collins (R-ME) -- has unanimously passed the US Senate and has been sent to the US House of Representatives for consideration and now sits in the House Committee on Energy and Commerce. The ARRL is asking its membership to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee.

This is EXCELLENT news!

When the ARRL announced this idea I was not to optimistic about the chances of getting this bill passed. We had just tried to get a simple set of exceptions from CC&Rs passed for ham radio antennas (and flag poles) here in Texas and failed so I didn't think we'd have much chance of getting this at the federal level. Not that this bill directly addresses the challenges of CC&Rs, which is why I'm guessing it has made it this far, but it is a step in the right direction.

IF we can get this bill though the house and signed into law, then we stand a chance at an impartial review of how ham radio's value to the country's security could be enhanced by a limited pre-emption of CC&R's. Although it's not a given, I welcome the chance of side stepping the lobbyist and effect of big money on the political landscape and have the issue studied.

Write your congressman..

> <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more information, including instructions on how to encourage the committee's leadership to support S 1755.

It may not make it possible for me to force the HOA to accept an antenna in my backyard legally, but it can only help ham radio in the USA to have this study done.

Thanks!

-= Bob =-

I would also suggest looking at mobile VHF radios. While larger than a handheld, they are also more powerful. You can run them off battery power in the house for an emergency fixed station or off your car batter for a mobile station.

Eventually you will probably want one of each if you want to get seriously involved in emergency communications.

If you used the ARRL study guide (not the shorter question/answer book), I believe that it contains instructions for a 2 meter J-pole. This is a very useful antenna for fixed station use as it doesn't need the ground plane like a standard vertical does. So basically you can connect where you like (although you might want to get it away from other metal objects for best results).

Dee, N8UZE

Mahalo, I'll look into that antenna. I do have the ARRL Level 1 Ham
Manual. I've got a couple of options on where/how to set up antennas.

I have definitely checked out the mobiles, but have decided to start
with the HT. When I get a better feel for various bells/whistles, and
limitations (or not) of my QTH, I will no doubt get a bigger rig. I also
anticipate upgrading to general within a short time, and will need to
consider HF.

I received the following email from Jim Cross, WI3N, Section Manager for Maryland-DC.

The deadline is pretty close. Please consider nominating one of the young hams in your area.

73,
Art K�AIZ
****

Hello SMs,

I know a number of sections have recipients of these scholarships.

Sorry about the timing, but perhaps you could alert your constituents.

The deadline of March 31 for The Foundation for Amateur
Radio scholarship applications is fast approaching.

Scholarships are open to all licensed amateurs who are
pursuing a full-time course of studies beyond high
school and are enrolled in or have been accepted for
enrollment at an accredited university, college or
technical school.

If you or someone you know fits the above description,
please go to the F.A.R. website,
http://www.farweb.org/scholarships/index.php, download
the application and directions, get signatures from
organizations where applicable, and mail it in time to
meet the March 31 cut-off date.

The Foundation for Amateur Radio administers scholarships
on behalf of Amateur Radio Clubs, organizations, and
private individuals. The Foundation administers these
scholarships without cost to the applicants or sponsors.

73, Jim Cross WI3N
SM MDC

==> REGIONAL CONFERENCE ON AMATEUR RADIO 2010 (RCAR 2010)

The following information is from Ole Garpestad, LA2RR, IARU Vice-President.

The Regional Conference on Amateur Radio will be held April 4 - 6, 2010 in Doha, State of Qatar and will be the biggest Regional Symposium on Amateur Radio in the Middle East in 2010.

The Conference is organized by the QATAR AMATEUR RADIO SOCIETY (QARS) jointly with the International Amateur Radio Union (IARU). So far the kind invitation from the QARS Chairman <http://tinyurl.com/ybecgf6> H.E. Abdullah bin Hamad Al-Attiyah, A71AU, has been accepted by a number of IARU societies in the Middle East as well as one from Region 3 together with Telecom Regulators and Administrations from the GCC area. Participation is also expected from ITU officials as well as local Qatar officials. The IARU team will consist of: IARU Vice President Ole Garpestad, LA2RR, IARU Region 1 President Hans Blondeel Timmerman, PB2T and IARU Region 1 EC-member Hani Raad, OD5TE.

The symposium gives the delegates the opportunity to exchange information related to the Amateur Radio Service in the Arab World along with the regulatory aspects in connection with the Amateur Radio Service. The program consist of presentations on Regulatory issues, preparation for WRC-12, Amateur Radio Emergency and Disaster Communication, national regulations of Amateur Radio in the GCC States combined with panel discussions and workshops with the aim to assist in building and maintaining good working relationship between the National Regulators and the Amateur Radio Societies.

Doha has been launched by UNESCO as the capital of the Arab culture and a celebration of "Al-Doha Capital of Arab Culture 2010" with H.E. Minister of Culture, Arts and Heritage will take place during the RCAR 2010 event.

More information on the invitation, program, hotel and visa may be found in related documents available on the IARU Region 1 web or obtained from any of the IARU team members listed above.

==> WIRELESS INSTITUTE OF AUSTRALIA CELEBRATES 100 YEARS

The Wireless Institute of Australia (WIA) is celebrating 100 years of organized amateur radio in Australia.

On 11 March, 1910 a meeting of like-minded people in the Hotel Australia, Martin Place, Sydney, formed the Institute of Wireless Telegraphy of Australia, and soon after dropped the word 'telegraphy' from its name. Chairman of the founding meeting, George Taylor, proposed "the formation of an institution amongst experimenters and enthusiasts in wireless for their mutual benefit."

A similar organisation was formed in Melbourne - the Amateur Wireless Society of Victoria, on 30 November 1911 at a meeting attended by 50 enthusiasts. In 1913 it changed its name to the Wireless Institute of Victoria, and then became the Wireless Institute of Australia, Victorian Division. Then followed The Wireless Institute of Queensland (1912), the West Australian Radio Club (1913) became the Wireless Institute of Australia, Western Australia Section.

In May 1924 the Institute at a federation meeting held in Melbourne resulted in a nation-wide organisation to represent the experimenters, an outcome that had been desired for some time by the

Postmaster General who had responsibility for wireless. Exactly 100 years on from that first meeting in Sydney, the experimenters, now known as radio amateurs, can legitimately celebrate the establishment of their representative organisation, the Wireless Institute of Australia - the oldest such group in the world.

A range of initiatives and activities are to happen in 2010 providing an opportunity for every radio amateur to be involved in what will be a memorable celebration. Special event callsign VK100WIA will be very popular. Make it a personal aim to make contact this station, consider your plan to achieve the WIA Centenary Award and if a club member support its involvement in the celebration. A commemorative logo is now available for use by WIA members on their QSL cards. Want to know more? Full details are available on the WIA website through its homepage at www.wia.org.au and look under the 'WIA Centenary Celebrations' section. It contains a lot of information including activities, the commemorative logo, Centenary Award, the VK100WIA special event callsign -its roster, online log and QSL card - plus a range of affordable centenary merchandise. Credit-WIA web site.

==> BILL WILSON, VE3NR, SK

The International Amateur Radio Union expresses its profound regret of the recent passing of Bill Wilson, VE3NR. Bill was a strong supporter of the amateur radio service with his work for the Canadian regulator at the International Telecommunications Union. He provided support and guidance to the Canadian IARU member society for many years. Bill mentored a number of prominent individuals including Robert Jones VE7RWJ, the former Director of the Radiocommunication Bureau at the ITU.

IARU President Tim Ellam VE6SH remembers Bill was instrumental in assisting Canadian amateurs with planning for WARC-92. "Bill Wilson was one of the best friends amateur radio could have. His guidance and support to Radio Amateurs of Canada and its predecessor societies cannot be underestimated" Ellam said. IARU President Emeritus, Larry Price W4RA, recalled that WARC-92 was a turning point in the future relationship between CARF and CRRL when neither organisation could agree on a single spokesperson for amateurs in Canada and this eventually resulted in proposals to combine the two to have a single national Society, R.A.C. "Bill Wilson was a strong leader who did not lose sight of the eventual goal of representing well the radio amateur's interests, he is sorely missed."

The IARU and its member societies express its deepest sympathies to Bill Wilson's family.

==> IARU REGION 2 ASSISTS MEMBER SOCIETY WITH EARTHQUAKE DAMAGE

At the 2007 Triennial IARU Region 2 Conference, the General Assembly established a Region 2 Relief Fund. Like many other areas around the world, portions of R2 are situated in areas that are subject to numerous hurricanes, severe storms, floods, earthquakes and other types of natural disasters. During some of these natural disasters, Region 2 national amateur radio societies have suffered severe or extreme damage to their society stations and buildings, including antenna systems. The societies in Region 2 felt there was a need for a process of collecting donations and distributing donations to Region 2 Member Societies who have suffered damage to their national society stations or buildings that are due to natural disaster.

The resolution passed unanimously by the Region societies at the conference directed that funds accumulated in the Region 2 Relief Fund shall be distributed by the R2 Executive Committee solely to assist Region 2 Member Societies for repairing or rebuilding stations and buildings, including antenna systems, because of damages resulting from natural disasters. Member Societies that receive funds from the Region 2 Relief Fund must provide a report with the R2 Executive Committee detailing for the use of such funds. The conference set aside an initial 5,000 USD for the fund.

In February of this year, Chile suffered a severe earthquake which registered 8.8 on the Richter scale. The headquarters station for the Chilean member-society, Radio Club de Chile, suffered major damage to its building and its antenna system. RCCH asked the R2 EC for monetary assistance from the R2 Relief Fund and the R2 EC agreed to assist the society with funds to help repair its HQ building and antenna system.

This is an excellent example of the IARU stepping in to help one of its member-societies in a time of need.

If your national society would like to assist the RCCH with a donation, please contact the Region 2 Secretary, Ramon Santoyo XE1KK at xe1kk@iaru.org.

==> IARU QUESTIONS WHETHER CERTAIN MEMBER-SOCIETIES STILL EXIST

At the IARU Administrative Council meeting in October, 2009, a procedure was adopted to deal with the situation of non-existent or non-functioning member-societies. Under this newly adopted procedure, if the IARU regional organization determines that there is no evidence of the continued existence of the society for a period of 5 years then the regional organization may request that the Administrative Council publish a notice in the IARU /Calendar/ its belief that the society has ceased to exist and calling for the submission of any evidence to the contrary within 180 days of such publication. If no evidence of the continued existence is presented to the AC within the 180-day period then that Member-Society shall be deemed to no longer exist. After that, if there is an amateur organization within the country that believes it can perform the duties of an IARU Member-Society then it can apply for IARU membership.

Three IARU Member-Societies in Region 3 will be listed in the IARU

/Calendar/ number 189 that fall within this category of non-existent or non-functioning societies. They are: Papua New Guinea (PNGARS), French Polynesia (CORA) and Burma (BARTS). IARU /Calendar/ number 189 will likely be published about the same time this E-Letter is received.

==> IARU OPERATING AWARD FOR WORKED ALL CONTINENTS (WAC)

The IARU issues Worked-All-Continents certificates to amateur radio stations around the world that work all six continental areas.

Qualification for the WAC award is based on an examination by the International Secretariat, or a member-society, of the IARU of QSL cards that the applicant has received from other amateur stations in each of the six continental areas of the world. All contacts must be made from the same country or separate territory within the same continental area of the world.

All QSL cards (no photocopies) must show the mode and/or band for any endorsement applied for.

Contacts made on 10/18/24 MHz or via satellites are void for the 5-band certificate and 6-band endorsement. All contacts for the QRP endorsement must be made on or after January 1, 1985 while running a maximum power of 5 watts output or 10 watts input.

For amateurs in the United States and in an area without IARU representation, the WAC application forms are available in MS Word <http://www.iaru.org/wac/wac.doc> and Adobe PDF <http://www.iaru.org/wac/wac.pdf> format. Once completed, applications should be directed to the WAC Awards Manager, ARRL, 225 Main Street, Newington, CT USA 06111. After verification, the cards will be returned and the award sent soon afterward. Also, approved DXCC card checkers can verify WAC program applications. For the latest list of DXCC card checkers visit <http://www.arrl.org/awards/dxcc>. There is a $13.00 fee for US applicants. Sufficient return postage, or, a self-addressed stamped envelope, is required for the return of QSL cards. US amateurs must have current ARRL membership. At the present time credits in the ARRL LogBook of The World (LoTW) system cannot be claimed for WAC credit. Applicants who have a current DXCC award in the DXCC computer system can apply for WAC by completing the WAC application form and sending it to the address noted above, listing credits to be claimed on the application form. In this case QSL cards are not required. Send questions to wac@arrl.org.

For all other amateurs, applicants must be members of their national amateur radio societies <http://www.iaru.org/iaru-soc.html> affiliated with IARU <http://www.iaru.org/>, and apply through the society.

If you have any information that would be appropriate to publish in this electronic newsletter, please contact me at w6rod@iaru.org.

Rod Stafford W6ROD
IARU Secretary

The IARU E-Letter is published on behalf on the Administrative Council of the International Amateur Radio Union by the IARU International Secretariat. Editor: Rod Stafford, W6ROD, IARU Secretary.

==> FCC NEWS: FCC RELEASES NATIONAL BROADBAND PLAN

<http://www.youtube.com/watch?v=QYf2AVCdzZw> On Tuesday, March 16,

the FCC held an Open Meeting to introduce its report Connecting America: The National Broadband Plan (NBP) that was delivered to Congress that afternoon. Calling it "an ambitious agenda for connecting all corners of the nation while transforming the economy and society with the communications network of the future -- robust, affordable Internet," the Commission found that nearly 100 million Americans lack broadband at home today and 14 million Americans do not have access to broadband. Read more here <http://www.arrl.org/news/stories/2010/03/16/11393/?nc=1>.

==> LEGISLATIVE AFFAIRS: ARRL REQUESTS SUPPORT FOR S.1755

Senate Bill 1755 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 introduced in October 2009 by Senators Joe Lieberman (ID-CT) and Susan Collins (R-ME) -- has unanimously passed the US Senate and has been sent to the US House of Representatives for consideration and now sits in the House Committee on Energy and Commerce. The ARRL is asking its membership to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee. S 1755 accomplishes the same things as HR 2160; HR 2160 was introduced in April 2009 by Rep Sheila Jackson Lee (D-TX-18). Since S 1755 has already been approved by the Senate, moving it forward in the House will simplify the process. Click here <http://www.arrl.org/news/stories/2010/03/10/11385/?nc=1> for more information, including instructions on how to encourage the committee's leadership to support S 1755.

==> LEGISLATIVE AFFAIRS: COMPANION BILL INTRODUCED IN US HOUSE TO PROVIDE TECHNICAL RESOURCES TO FCC COMMISSIONERS

Following the Senate's lead, Representatives Jerry McNerny (D-CA-11) and Tom Petri (R-WI-6), introduced HR 4809 -- the FCC Commissioners' Technical Resource Enhancement Act -- in the House of Representatives on March 10. Copying the exact language from S 2881 (a bill with the same name) introduced by Senators Olympia Snowe (R-ME) and Mark Warner (D-VA) in December 2009, the bill seeks to provide greater technical resources to FCC Commissioners. Read more here <http://www.arrl.org/news/stories/2010/03/16/11392/?nc=1>.

==> ARRL SEEKS INPUT FOR NEW IARU REGION 2 BAND PLAN

The International Amateur Radio Region 2 conference -- to be held later this year in El Salvador -- brings together delegations from the national Amateur Radio Societies in the Western Hemisphere. One of the topics on the agenda will be the Region 2 HF band plan. This band plan is "harmonized with" -- spectrum management-speak for "very similar to" -- the IARU Region 1 and Region 3 band plans. At this year's conference, the IARU Member-Societies will consider possible changes to the Region 2 band plan. The ARRL is cooperating with this procedure by inviting input to be sent to the ARRL Board of Directors' Band Planning Committee. The committee will review the existing Region 2 band plan, consider input from the amateur community and make recommendations to the ARRL Board for submission to IARU Region 2. Read more here

<http://www.arrl.org/news/stories/2010/03/04/11374/?nc=1>.

==> FCC NEWS: FCC PROPOSES TO ELIMINATE SPREAD SPECTRUM APC REQUIREMENT, REDUCE SPREAD SPECTRUM POWER LIMIT; CLEANS UP PORTIONS OF PART 97

In response to a 2006 ARRL Petition regarding spread spectrum issues, the FCC released a Notice of Proposed Rule Making (NPRM) on March 16 (WT Docket No 10-62), proposing to amend Part 97 to facilitate the use of spread spectrum communications technologies by eliminating the requirement that amateur stations use automatic power control (APC) to reduce transmitter power when the station transmits a spread spectrum (SS) emission and reducing the maximum transmitter power output when transmitting a SS emission. Through an Order attached to the NPRM, the Commission also made "certain non-substantive revisions" to the Amateur Service rules. Read more here <http://www.arrl.org/news/stories/2010/03/18/11396/?nc=1>.

==> ARRL PUBLICATIONS: ARRL INTRODUCES UNDERSTANDING BASIC ELECTRONICS, SECOND EDITION

ARRL's Understanding Basic Electronics, second edition <http://www.arrl.org/catalog/?item=0823> -- your gateway into the exciting world of electricity and electronics -- is written in a friendly, easy-to-understand style that beginners and nontechnical readers will enjoy. This introductory guide is ideal for students with basic math skills, as well as radio amateurs and experimenters interested in gaining a more complete understanding of basic electronic principles -- anyone eager to unlock the mysteries of electronic circuits.

Authored by Walter Banzhaf, WB1ANE, this new edition features student-friendly math made easy -- an inexpensive calculator is all you need -- and now includes digital electronics. Even if you already have a foundation in basic electronics, you will enjoy the small module format of each chapter, allowing readers to digest "bite-sized" chunks of learning material. Real-world examples and clear illustrations make the study of electronics interesting and fun! A handful of small "kitchen table" projects are included to help bring abstract concepts to life.

Understanding Basic Electronics, second edition includes chapters on electronics, analog and digital electronic circuits, electrical terms, conductors, insulators and resistors, electricity and magnetism, capacitors and inductors, electrical circuits (both series and parallel), Ohm's law, techniques and tricks on how to solve circuit problems, energy and power, alternating current (ac), capacitors and inductors, transformers, impedance, resonant active device concepts, semiconductors, diodes, transistors and ICs -- and much more.

For a limited time, ARRL members can purchase Understanding Basic Electronics, second edition for only $29.95 <http://www.arrl.org/catalog/?item=0823> -- that's $3 off the regular price of $32.95!

==> SOLAR UPDATE

Tad "Doubt that the Sun doth move, doubt truth to be a liar, but never doubt I love <http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=hamlet&Act=2&Scene=2&Scope=scene>" Cook, K7RA, reports: Solar activity recovered nicely from the March 6-9 frightening absence of sunspots, reminiscent of years prior to the end of November 2009. For our reporting week -- March 11-17 -- the average daily sunspot numbers increased relative to the prior week by 17 points to 29.4; the average daily solar flux was up by 9 points to 87.6. A new sunspot group -- 1055 -- appeared on March 11, following the appearance of 1054 the day before. Group 1055 only lasted a couple of days and another new spot, 1056, emerged on March 17 and is still visible and active. On March 11-12, a solar wind met a south-pointing interplanetary magnetic field (IMF) and pushed geomagnetic instability, especially pronounced at higher latitudes. Alaska's college K index at Fairbanks went to 5 during several 3-hour readings over both days. So far in March, the average daily sunspot number is 23.9. Every month of March since the end of the last century, the average (1999-2009) was 100.5, 203.6, 166.7, 154.3, 119.7, 81, 41, 21.3, 9.8, 15.9 and 0.77. Sobering, isn't it? And no, that isn't an error for 2009. March of last year had sunspots on only two days -- March 6-7 -- pushing the average for the month to less than one. This Saturday, March 20, is the vernal equinox, the first day of spring, which begins at 1732 UTC. Both the southern and northern hemispheres are bathed in an equal amount of sunlight; the time around the spring and fall equinox is great for HF propagation. Look for more information on the ARRL Web site on Friday, March 18. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by William Shakespeare's Hamlet (Act II, Scene 2) <http://www.opensourceshakespeare.org/views/plays/play_view.php?WorkID=hamlet&Act=2&Scene=2&Scope=scene>.

==> THIS WEEK ON THE RADIO

This week, the 10-10 International Mobile Contest is March 20. The Russian DX Contest, the Oklahoma QSO Party and the North Dakota QSO Party are March 20-21. The Virginia QSO Party and the BARTG HF RTTY Contest are March 20-22. The Run for the Bacon QRP Contest is March 22 and the SKCC Sprint is March 24. Next week, the CQ WW WPX Contest (SSB) is March 27- 28. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> SILENT KEY: BABY BLINDNESS PIONEER ARNALL PATZ, EX-WA3EVC (SK)

Dr Arnall Patz, ex-WA3EVC -- an ophthalmologist who discovered and eliminated a major cause of blindness in premature infants -- passed away from heart disease on March 11. He was 89. In 1954, Patz proved that treating premature babies with pure oxygen could destroy their eyesight. At the time, this was the most common cause of blindness in premature infants. Although the new understanding came too late for thousands of people who were made blind by oxygen -- including the singer Stevie Wonder, ARRL Connecticut Section Manager Betsey Doane, K1EIC, and her twin sister Barbara Lombardi, K1EIR -- it undoubtedly saved many more from a similar fate. "Barb and I are thrilled to learn that the doctor who discovered the effect of too much oxygen at birth was a ham. We only wish we had met him or worked him on the air. How exciting that would have been!" Doane told the ARRL. Patz operated a ham radio from his home on behalf of the Maryland Eye Bank. According to his nephew Sam, Patz erected an 80 foot tower at his home and became known to amateurs across the country for putting out the word on the airwaves whenever corneas were needed for transplant. Read more here <http://www.arrl.org/news/stories/2010/03/17/11395/?nc=1>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, April 25, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, May 7, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1701 - March 19, 2010

Amateur Radio Newsline report number 1701 with a release date of Friday, March 19th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Germany protects its hams from cable interference by saying no to a cable system that wanted protection from broadband sharing: the FCC asks for input in preparation for W-R-C 2012, and the ARRL says its time to ask congress to back the Emergency Communications Enhancement Act. All this and more on Amateur Radio Newsline(tm) report number 1701 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: GERMAN COURT REFUSES TO PROTECT CABLE OPERATOR FROM 800 MHz BROADBAND

A German court's decision to deny a cablecaster from ingress protection by wireless broadband turns out to be good news for that nations hams. Frank Haas, KB4T, has the details:

--

A German cable television operator has failed in its attempt to enjoin that nation's government from auctioning off spectrum in the 800 MHz range. This for fear that signal ingress from new wireless broadband systems might interfere with the cable system's operations.

The Deutscher Amateur Radio Club, which is Germany's national ham radio society, reports that the Cologne Administrative Court has rejected the action brought by Kabel Baden-Wuerttemberg. In its denial order the court said that if the cable operator was afraid of interference it could take technical steps to improve its system.

The Deutscher Amateur Radio Club views the ruling positively since it will encourage cable operators to upgrade leaky cable systems. This it says will not only keep the cable system from suffering signal ingress of any 800 MHz transmissions, it should also reduce the interference that leaky cable systems cause to radio amateurs.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill , Florida.

--

For decades cable operators in Germany have claimed their networks are RF tight and there could be no problem with cable interference to any radio bands. This, despite the fact that the audio channel of one station has disrupted the Amateur Radio use of 145.750 MHz for many years. The DARC report can be seen in Google translated English at http://tinyurl.com/yjdcch9 (DARC)

**

RADIO LAW: FCC PROPOSED LOWERING HAM RADIO SPREAD SPECTRUM POWER IN EXCHANGE FOR DOING AWAY WITH APC RULE

We all know that the use of Spread Spectrum in ham radio has been in the news a lot of late and it is once again. This time the form of a Notice of Proposed Rule Making issued by the Commission on March 16th.

The NPRM is in response to an ARRL petition regarding use of the mode. In 2006, the ARRL petitioned the FCC, requesting that the Automatic Power Control requirement be eliminated , asserting that the provision has proven to be virtually impossible as it requires the operators of the transmitting stations to determine the transmitter power received at distant receivers. This claimed the League that this requirement has proven to be something of a barrier to Spread Spectrum experimentation.

In the new NPRM, the FCC agreed with the ARRL that the Automatic Power Control requirement may be unnecessarily impeding Amateur Radio operators in advancing the radio art,. At the same time the Commission does not propose to simply eliminate the requirement.

Noting that the purpose of the Automatic Power Control requirement is to limit interference to other stations, the FCC pointed out that commercial broadband Internet service providers operating in the 900 MHz and 2.4 GHz I-S-M bands argue that the Automatic Power Control requirement should be maintained. This, in order to prevent interference to other users. They also referred to suggestions maintaining that if the Automatic Power Control requirement is eliminated, the FCC should lower the maximum power limit on amateur stations transmitting Spread Spectrum emissions so that interference is minimized.

And the bottom line: The FCC says that it is proposing to eliminate the Automatic Power Control requirement, but the caveat. The FCC is also proposing to reduce the maximum transmitter power output amateur stations may use when transmitting Spread Spectrum communications from 100 watts to a peak of only 10 watts.

In the Order, the FCC also made amendments to correct the Amateur Service rules or conform them to prior Commission decisions. These revisions will take effect once they are published in the Federal Register. The NPRM is not yet available for comment. Its text can be found on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-38A1.pdf. (FCC, ARRL, Others)

**

RADIO LAW: FCC ASKS INPUT IN PREPARATION FOR NEXT WRC

The International Bureau of the Federal Communications Commission is seeking input from interested parties to help develop its recommendations to the U.S. Department of State for U.S. proposals and positions concerning possible revisions to the International Telecommunication Regulations. This, at the next World Conference on International Telecommunications to revise the terms of the treaty in 2012.

Specifically, the FCC is looking for input on Article 1, Purpose and Scope of the Regulations; Article 2, which are Definitions; Article 3 on International Networks; Article 4 that deals with International Telecommunication Services and Article 5 that covers Safety of Life and Priority of Telecommunications. Also needed in input on Article 6 covering Charging and Accounting; Article 7, Suspension of Services; Article 8, Dissemination of Information; Article 9, Special Arrangements; and Article 10 which are all of the Final Provisions.

The FCC serves as a technical advisor to the Department of State for ITU meetings and conferences, including the upcoming World Conference on International Telecommunications and other international meetings to prepare for that conference. In that role, the FCC provides expert advice and recommendations to the Department of State on U.S. proposals and positions. (FCC)

**

RADIO POLITICS: ARRL SAYS NOW IS THE TIME TO SUPPORT THE AR EMCOMM ENHANCEMENT ACT

The United States Amateur Radio Emergency Communications Enhancement Act of 2009 introduced in October 2009 by Senators Joe Lieberman and Susan Collins has been unanimously passed the Senate. Its now been sent to the House of Representatives for consideration and is currently sitting in the House Committee on Energy and Commerce.

Now, the ARRL is asking hams nationwide to contact the leadership of the Energy and Commerce committee, requesting support and action on moving S 1755 through the committee. S 1755 accomplishes the same things as HR 2160 which was introduced in April 2009 by Representative Sheila Jackson Lee. Since S 1755 has already been approved by the Senate, moving it forward in the House will simplify the overall approval process.

If enacted into law, S 1755 would instruct the Secretary of Homeland Security to undertake a study on the uses and capabilities of Amateur Radio communications in emergencies and disaster relief. It would also limit the Department of Homeland Security to 180 days to report its findings to Congress. (ARRL)

**

RESTRUCTURING: CANADIAN HAMS GRANTED VLF ALLOCATION

Canadian hams now have a Very Low Frequency band. This with word that Industry Canada has approved access by radio amateurs in that nation to the band from 135.7 to 137.8 kHz, subject to certain conditions.

Canadian hams choosing to use this new band are limited to a maximum radiated power of 1 watt Effective Radiated Power. They also cannot cause harmful interference to stations of other nations that still use this spectrum as a radionavigation service.

According Radio Amateurs of Canada the Revised Canadian Table of Frequency Allocations, announced in December 2009 to incorporate changes from decisions made at World Radiocommunication Conference in 2007.

One of these permits amateur use of this spectrum on a secondary basis to all other users. (RAC)

**

RESTRUCTURING: DENMARK GIVES HAMS 5 MHZ

The Southgate news says that Danish radio amateurs can now apply to operate in 5.250 to 5450 MHz band. Reports are that Bent Christensen, Oh-Zed 0-5-B has already received a 5MHz permit. More on this restructuring is on-line at the Danish national amateur radio society's website. A link to it in electronically translated English is at
http://translate.google.co.uk/translate?u=http%3A%2F%2Fwww.edr.dk%2F&sl=da&tl=en&hl=&ie=UTF-8)
(Southgate)

**

BREAK 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the NS9RC repeater serving Highland Park, Illinois.

(5 sec pause here)

**

RADIO LAW: FCC'S NATIONAL BROADBAND PLAN GOES TO CONGRESS

The FCC has sent its long awaited National Broadband Plan to Congress. Released on Tuesday, March 16th, the Plan is deemed to be a call for action over the next decade that includes goals.

Among these are to provide affordable access to ultra-high-speed broadband in every American community at a speed of at least 1 gigabit per second at anchor institutions such as schools, hospitals, and military installations. It also recommends connect 100 million households to affordable 100-megabits-per-second service by building the world's largest market of high-speed broadband users and ensuring that new jobs and businesses are created in the United States.

Perhaps the most interesting point to those involved in hobby radio is the proposal to provide every first responder with access to a nationwide, wireless, interoperable public safety network. One that would multiply redundant and let responders anywhere talk with others directly or through a chain of command.

Other than that there is nothing remotely mentioned that directly affects ham radio, however the devil could be in the details if and when Congress gives the FCC a green light to proceed. And the details we are referring to are in the UHF and microwave spectrum which broadband providers believe is ideal for future service build-outs and expansion of services.

You can read the entire document on-line at www.broadband.gov/plan/ (FCC)

**

RADIO RULES: FCC WANTS TO REVISE EX PARTE PRESENTATIONS

A new way of dealing with the FCC may be on the horizon. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has the details:

--

The FCC has proposed that anyone who gives an oral ex parte presentation before it would have to provide a written description of the discussion. Currently such descriptions are required only when new material is involved.

In its recent notice, the commission is asking for comment on whether to require that companies meeting with the commission should disclose ownership information in meeting summaries or filed pleadings. This, so readers can better grasp the filer's interest in the proceeding.

The agency is thinking of requiring summaries within four hours for an item that's to be on the agenda during its open monthly meeting during the seven-day "sunshine period" immediately before those meetings.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF.

--

For those not aware. ex parte is a Latin legal term meaning from, by or for one party. Ex parte rules are intended to make sure the public is aware of who is possibly influencing the regulators' decision process.
(RW)

**

RADIO LAW: FCC WANTS TO STREAMLINE IT PROCEEDURES

The Federal Communication Commission has put forth several proposals to streamline its procedures.
One of its main objectives is to give bureau and office chiefs the ability to kill defective or repetitive petitions for reconsideration so those don't reach the Commissioners or their staff floor.

By way of background, a defective petition for rule making or for reconsideration is one that contains errors, is untimely, has raised no new arguments, or does not relate to the issue at hand. In ham radio circles this might be one of those regularly filed petitions asking for a ban on closed repeaters or limiting contesters to specific parts of the amateur radio bands. Requests that are either ignored for a long period of time or dismissed using the same language as used to discharge a previous petition making the same request.

The agency has also proposed changing its rule that specifies it can reconsider a decision on its own motion within 30 days. This, to clarify that the Commission has the authority to change a verdict, and not just set it aside or vacate it.

Lastly, the Commission wants to make more use of electronic filing and has upgraded its Electronic Comment Filing System. Now, it is asking for comments on how it can maximize e-filing and minimize paper submissions.

The FCC notes that with over 3,000 dockets open, it has quite a backlog to go through. It also admits that some of those dockets have seen little to no activity in years. (TVT)

**

RADIO LAW: SENATE COMPANION FCC ENGINEER BILL INTRODUCED

A Senate bill that would add an engineer to the staff of each Federal Communications Commission commissioner now has a companion measure in the House. Representative Jerry McNerney of California introduced H.R. 4809 after representatives of the Society of Broadcast Engineers met with his Washington staff a few weeks ago.

SBE's Government Relations Chairman Barry Thomas and General Counsel Chris Imlay, W3KD, visited offices of several House members to garner support for a companion to a Senate bill introduced in January by Senator Olympia Snowe, of Maine, and co-sponsored by Sen. Mark Warner, of Virginia. The bill would authorize an engineering staff person for each of the five FCC commissioners. With a House bill now introduced, the legislation can move through the committee process of both houses of Congress.

SBE President Vinny Lopez said the change would go a long way to ensure technical excellence at the highest levels of the commission.

McNerney is a second-term congressmen representing California's 11th congressional district, which includes a portion of California's Central Valley. He has an engineering background and is a member of the House Commerce Committee and the subcommittee on Communications, Technology and the Internet.

The text of the House bill was not yet available online as we write. (RW)

**

RADIO LAW: LOTS OF AMERICANS HAVE NO BROADBABD

The FCC has determined that about one-third of Americans don't have a broadband Internet connection at home. According to a report from the regulatory agency the main barriers to adoption are cost and literacy.

The agency is working on a plan to deploy nationwide wireless broadband. The usage study, "Broadband Adoption and Use in America," was released at the Brookings Institution. There appears to be no mention of how many Americans do not want or feel that they have no need for any form of broadband connectivity. (Government report)

**

PUBLIC SERVICE: VOLUNTEERS NEEDED FOR PITTSBURGH MARATHON

About 150 hams will be needed to provide communications for this years running of the Pittsburgh Marathon. Slated for May 2nd, over 6000 participants are expected, including 2000 marathon runners, 2500 half-marathon runners, and 500 relay teams.

According to Jeffrey Hutzelman, N3NHS, there are many positions around the 26.2 mile course that need to be covered, including mile markers, aid stations, buses and sweep vehicles and shadow communicators for race officials. If you plan to be in the Pittsburgh area on that date and want to volunteer, simply take your web browser to marathon.central.org, click on the words "Volunteer Now" and fill out the form.
(N3NHS)

**

RESCUE RADIO: RNW SENDS RADIO STATION IN A BOX TO CHILE

Radio Netherlands Worldwide is sending two complete mobile radio stations to the Chilean broadcaster Radio Universidad T�cnica Federico Santa Maria. This will enable two of its partner stations in the coastal region of Maule to resume their broadcasts as quickly as possible. This is the region was seriously affected by the earthquake on February 27th.

The mobile radio station, often called radio-in-a-box, is specially built to be used temporarily in countries where radio stations are forced off the air by natural disasters. Each station is less than a cubic meter in size, and is equipped with an FM transmitter, mixer, microphones, a CD player and a laptop computer. Radio Netherlands Worldwide has previously provided such stations following the earthquakes in Indonesia in September 2009 and Haiti this past January. The Chilean broadcaster supplied with the portable gear has worked closely with Radio Netherlands Worldwide for many years. (Media Network)

**

NAMES IN THE NEWS: CAM HARTFORD, N6GA, NAMED QRP EDITOR OF CQ MAGAZINE

A name in the news. This with word that Cam Hartford, N6GA, of Claremont, California, has been named QRP Editor of CQ Amateur Radio magazine.

Hartford, who works for book publisher Houghton Mifflin Harcourt, has been a ham since 1961and has been active in low-power operating for more than 20 years. From 1989 to 1991, he served on the Board of Directors of the QRP Amateur Radio Club International. He also served as that organization's Contest Manager from 1993 to 1999.

Hartford succeeds Dave Ingram, K4TWJ, who passed away in January. Ingram's final bi-monthly QRP column appears in the April issue of CQ. Hartford's first column will be in the June issue. (CQ)

**

HAM HAPPENINGS: EARLY CALL FOR PAPERS FOR ARRL/TAPR DCC

Technical papers are solicited for presentation at the 29th Annual ARRL and TAPR Digital Communications Conference to be held September 24th through the 26th in Portland, Oregon. These papers will also be published in the Conference Proceedings but you do bot need to attend the conference to have your paper included in the publication.

The submission deadline is July 31st. Please send papers to Maty Weinberg, in care of the American Radio Relay League, 225 Main Street, Newington, Connecticut, 06111. You can make your submission via e-mail to maty (at) arrl (dot)org.

**

THE SOCIAL SCENE: MEDITERRANO DX MEETING IN JULY IN ITALY

Turning to the ham radio social scene the next world meeting of the Mediterraneo DX Club takes place July 2nd to the 4th in Messina, Italy. Complete information on this event is on-line in multiple languages at www.mdxc.org. (IZ8CCW)

**

THE SOCIAL SCENE: VISALIA DX DINNER

The Mother Lode DX and Contest Club will host the 11th Annual Contest Dinner on Friday, April 16th, at the International DX Convention in Visalia, California. The dinner will be held in the Oak Room at the Visalia Holiday Inn. Pre-purchase is a requirement to attend and there will not be any tickets sold at the door. To reserve on-line take your web browser to www.mldxcc.org. (MLDXCC)

**

THE SOCIAL SCENE: FORMER ATTL PRES. W5ZN TO SPEAK AT DAYTON CONTST DINNER

And the North Coast Contesters are pleased to announce that Joel Harrison, W5ZN, will be the main speaker at the 2010 Dayton Contest Dinner. An active contest operator, Joel just finished a four year term as President of the ARRL in January of this year. For more information on this dinner, please visit contestdinner.com on the World Wide Web. (North Coast Contesters)

**

ON THE AIR: CELEBRATING THE 2010 SOCCER WORLD CUP

Amateur Radio special event station ZS10WCS will be on the air through July 12th to celebrate the 2010 Soccer World Cup being held in South Africa between June 11th and July 11th. The call will be used by members of various South African Radio League affiliated clubs. Operations through May 31st will only be on weekends. Between June 1st and July 12, ZS10WCS it will be on the air 7 days a week. QSL with a Self Addressed Envelope and one International Reply Coupon to PO Box 1721, Strubensvallei, 1735, South Africa. (SARL)

**

ON THE AIR: COMMEMORATING THE BATAAN DEATH MARCH

Sunday, March 21st is the anniversary of the World War II Bataan Death March. And in solemn commemoration the Mesilla Valley Radio Club will be operating special events station K5B from 1000 to 23 hours U-T-C. Information about contacting the station and getting a K5B Special Events QSL card can be found on the clubs website at www.n5bl.org /bataan. (Mesilla Valley Radio Club)

**

ON THE AIR: 3C0C ANNOBON ISLAND OPERATION DELAYED

On the air -- or maybe off the air is a better term for this. Word that the long awaited 3C0C operation from Annobon Island has suffered a setback. due to repairs being made to the islands lone airport runway.

On March 12th the ham radio operations planners announced that they had received a statement from Equatorial Guinea informing them that repairs to the runway will begin shortly and are expected to last two to three months. During that time no aircraft can land on or depart from Annobon.

DXpedition planners say that travel by boat is not a reality due to the small number of available water craft and the time it would take. For more details and updates please visit www dot 3c0c-annobon dot com on the World Wide Web. (3C0C)

**

DX

In DX, word that a multi-national group is planning to operate from Kurdistan in Northern Iraq between April 2nd and the 12th. The team has received a ten day visa issued by the government of Kurdistan. No other information is available as we go to air.

K9OT and KB9LIE will operate portable FP to activate Miquelon Island between July 5th and the 14th. They will operate CW and SSB primarily on 80 to 10 meters and possibly 6 meters as well. QSL as directed on the air.

The 3W6C team will activate C�n C� Island near Viet Nam on amateur radio satellites from April 10th to the 18th. Satellites to be activated include AO-07, AO-51, HO-68, SO-50, and SO-67, each on an as available basis. For additional information and operating plan, please visit www dot 3w6c dot qrv dot ch.

X4UL, is now active as 4S7ULG from Colombo, Sri Lanka. He will be there through April 7th working mainly on 20 and 17 meters P-S-K. QSL via UY5ZZ.

SP5ES and SP5UAF will be active as CR1M and CR1Z, respectively, from Sao Miguel in the Azores. This, during the CQWW WPX SSB Contest March 27th to the 28th. QSL CR1M via SP5ES. QSL CR1Z via SP5UAF.

Lastly, K4QD and AF4Z will once again be active portable HH4 from the Northwest Haiti Christian Mission. Their operation is planned to take place between March 22nd and April 2nd. They will operate 160 through 10 meters on CW, SSB and RTTY as time permits. Low band operations will be limited to the availability of AC power. QSL via their home callsigns either direct, via the bureau or using Logbook of the World.

(Above from various DX news sources)

**

THAT FINAL ITEM: NEW INTEREST IN SILICON NANOWIRES

Silicon nanowires are attracting an increasing level of attention from technologists and industry. This, due to their drive to create ever-smaller electronic devices will depend on these mechanical properties.

New research from North Carolina State University shows that silicon nanowires are far more resilient than their larger counterparts. This is a finding that could pave the way for smaller, sturdier nanoelectronics, nanosensors, light-emitting diodes and other yet to be thought up applications.

According to a recent study, silicon nanowires deform in a very different way from bulk silicon. Bulk silicon is very brittle meaning that it cannot be stretched or warped very much without breaking . On the other hand, silicon nanowires are more resilient, and can sustain much larger deforming before rupturing.

Other properties of silicon nanowires include increasing fracture strength and decreasing elastic modulus as the nanowire gets smaller and smaller. This study was funded by grants from the National Science Foundation and North Carolina State University.   (Adapted from Science Daily)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May

30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www.arnewsline.org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. You can also leave questions and comments on the official Young Ham of the Year Award page on Facebook dot com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

BREAKING NEWS: DAYTON HAMVENTION(c) ANNOUNCES 2010 AWARD WINNERS

Three amateur radio (ham) operators who have made significant contributions to the Amateur Radio Service, will be honored guests when Hamvention� 2010 opens in Hara Arena on May 14. In addition, a club of the year will be honored in keeping with the 2010 Hamvention theme, Amateur Radio Clubs Worldwide: The Lifeline.

Recipients of this year's Hamvention� awards are:

Special Achievement - Dick Ross/K2MGA for his excellent work over the past number of years on CQ magazine.

Technical Excellence - Simon Brown / HB9DRV for the invention and development of Ham Radio Deluxe.

Amateur of the Year - Jim Stafford / W4QO for 50 years of service to Amateur Radio and his support for public service and unending efforts to recruit and develop hams of all ages.

Club of the Year - North Fulton Amateur Radio League, NFARL, North Fulton, GA - Serving the greater Atlanta Area, the State of Georgia and the US with emergency services, training and the preparation of Amateur Radio in general.

" Choosing the finalists was a difficult process due to the number of fine nominations" said Frank Beafore, Chairman of the Awards Committee. This year, an additional award category was added - Club of the Year. This award honors a ham radio organization that contributes to the good of Amateur Radio.

"Although we narrowed our club choice to North Fulton, GA, we had a number of deserving candidates" stated Beafore. "The winner of this year's award is certainly a great example of the thousands of clubs and organizations around the world perpetuating our avocation".

An intimate dinner on May 15 will be held in downtown Dayton honoring the 2010 Hamvention Award winners.

D. Stussy wrote:

> Is there a point to presenting the statistics?

Yes there is, If you archive Jim's post then come back a year from now
you can see if the hobby is growing or shrinking, and how it is growing

For example.. A few years ago I was listed in the "Technician with HF"
group... Now I'm not (All other classes, Extra to be specific)

But it is important to know if we are growing or fading into the sunset.

Personally.. I prefer growth

And the stats.. They tell the story

Generally yellow is for "Hazard" (tow trucks, Snow plows and other vehicles that may be on the side of the road and it means "Don't run into me" Red or Blue is what I would call "Public Safety" (police/Fire/EMS) IN some states the use of rotating or flashing lights is regulated by law.. Michigan (Where I'm from) is one such.

Now.. If I'm, for example, sitting on a traffic crash, the use of a YELLOW "Kojack Light" is allowed.. However a co-worker of mine got written up when he used one under those conditions.. He did not violate the law.. but "Company" rules (I'm a retired police dispatcher.. He is still a police dispatcher,, In fact he made supervisor after I retired)

However.. I drive a Lumina APV (if I get it working again) not many vehicles are as "Visible" as a Lumina van or mini-van when in 4-way flasher mode. Thus.. Though I have a "kojack Light" (I think) somewhere.. 1: Not in car and 2: I don't actually know where it is.

I do carry a regulation set of D.O.T. Triangles however... AND the book that tells me how to lay 'em out (What every commercial driver must know, published, in my case, by the Michigan Secretary of State (DMV for Michigan)) a very useful book.

I also drive a 38' motor home towing said Lumina on occasion.

> value. Agents are not your friends.

There's an agent for the seller, and there's an agent for the buyer. They should be in a professional adversarial relationship. The seller's agent is out to get the highest price, and the buyer's agent is out to get the lowest. If, as the buyer, you don't think your agent is performing that task, find another agent.

Real estate agents most certainly should be your friend. As a buyer, I cannot possibly know the market and keep up with it as well as someone who does that as their full time job. My real estate agent knows vastly more about what questions to ask and what to look for than I do. While a buyer or buyer's agent may not be required to volunteer information, they are required to truthfully answer questions IF you know what questions to ask.

To try to interject the slightest bit of ham-radio-related content into this submission . . . if being able to erect an antenna is an important consideration for you when buying a house, find an agent who understands CCRs and related issues. If the agent doesn't understand the issues, they cannot do what you need them to do. If the agent cannot or does not perform, failing to ask the right questions or showing you houses that don't meet your needs, get another agent. You would do the same thing if you explained that you needed a minimum of three bedrooms and the agent persisted in showing you houses with two bedrooms.

73, Steve KB9X

The jargon is made up; the antenna was real. So was the radiation pattern. (We drove around Sunnyvale taking measurements.) I don't recall why "73" published the article in April. A similar article appeared in an Australian ham magazine, probably not in an April issue.

So far I've read much about the radio amateur who buys a place with restriction and then tries to circumvent them. I've seen almost no comments about someone already living in such a place and who then develops an interest in amateur radio.

I was living in a townhouse development (adjoining units side by side, each with their own flat roof) in southern Arizona when I resurrected my interest. I went up on the roof, installed a 7' length of 1" pvc tubing for the support for an inverted-V, and ran ladder line inside the tubing. The tubing was supported by tv mast clamps attached to a parapet wall that separated my unit from one of my neighbors'. The tubing and antenna wires were visible from many directions from the street, and no one ever said anything. It was up there for six years. The CC&R's did prohibit antennas, but it may have said "no antennas without permission." I never asked for permission.

Same thing in the place I moved to across town, this time in a single family home, with CC&R's stating "no antennas without permission." I put up a 2m/440 antenna on the flat roof (same arrangement as above), and on a 5 foot mast in my small back yard I erected an MFJ Hi-Q loop, vertically oriented. It was very visible from the street! Although I referred to it as my "yard sculpture," I told neighbor friends what it was, and no one ever said anything.

I did not live in one of the ridiculously restrictive developments. So while just about any new housing (except for custom homes on land you buy) are developments that come with CC&R's that almost always say "no antennas," you can find developments that are not overly restrictive and operate more loosely. Just don't expect to put up a serious structure. The MFJ Hi-Q Loop works very, very well, and doesn't look like an antenna. Many other low-profile options are available for use in such developments.

Another good point, and largely the reason that I support the efforts to mitigate the antenna restrictions. A person who doesn't think one thing or another about restrictions and then becomes interested is the loser in this situation. That is why it has to be fixed.

Which was point to begin with.

Mitigation, NOT circumvention.

Jeff

Nebraska Legislative Bill LB719, to allow storm-spotters to use amber flashing lights, was one of the subjects of a hearing today by the State Legislature Transportation and Telecommunications Committee.

The hearing began with very positive remarks about amateur radio and storm-spotting by Senator Bill Avery's representative. Then Pat Gerdes, KA�SGL, Region 15 Emergency Management Director, Bob Rose, Clay County Emergency Manager, Larry Dix, Nebraska Association of County Officials Executive Director, and I testified in support of the Bill. There was no testimony in opposition.

The questions raised by the Senators were primarily clarification. Two specific questions were whether there had been accidents involving spotters in the past and how to avoid the use of amber lights by those who were not storm-spotters, or other approved users.

It is my opinion that the hearing went well and that we have a good shot at having this bill voted into law. When I have more information, I will pass it on.

73,
Art K�AIZ

When I was shopping for my house in Pahrump, NV, I already was a ham so I knew enough to look into CC&Rs against antennas. Whenever I found a likely prospect, I went to the County Recorder's office to look up the deed and any other documents like CC&Rs and easements. The house I finally bought did have CC&Rs, but they were mainly about minimum house size and setbacks; not a word about antennas.

Another development in Pahrump had a no-antennas clause in the CC&Rs. And this was not a upscale hoity-toity area: the CC&Rs restricted houses to be mobile homes, i.e., manufactured and trucked to the site. A ham I knew lived here. The house belongs to his current live-in woman friend, so in a sense he did not have much choice in the matter. :-) There is no restriction on antennas on vehicles parked in the driveway, so for VHF and UHF he ran cables out to the antennas on his motorhome. For HF, he ran a long wire from the house to the detached garage using very fine wire. While we were in his back yard, he pointed it out to me from about 10 feet away, and I could not see it!

Sometimes "Right now" is imposed on people.

My brother-in-law worked for IBM, and he was promoted and transferred every 3 years to a different state. (Inside IBM, the joke is that IBM stands for "I've been moved!")   IBM sold his old house for him and paid all of the expenses of buying a new house. But if he didn't buy right away, he would lose out on these benefits in purchasing the new one.
My sister and he literally had 2 weeks to finalize their selection of a new house in an unfamiliar city and sign the purchaseagreement.

Dick AC7EL

I'd certainly try to negotiate needed time. If they only have two
weeks, I wonder if IBM has a whoops! clause. A person can have their
life turned into a train wreck by buying a house that turns into a
money pit, or is a a meth neighborhood, or the like. Otherwise it
makes a company that forces you do make such gambles a bit less
desireable to work for.

While this is veering off into OT territory, we all have choices. I won't live in a antenna restricted neighborhood. I'd buy a house in the countryside first, I'd rent and wait. In the end, it's all about choices. For me, some things that I consider choices, other might consider that it is something that they are mandated to do and that they have no choice. That's pretty sad IMO, because I think that people actually have more choices than they think they have.

But my hobbies are as important to me as my vocation, so I will live in a place where I can enjoy Ham radio.

Thanks for proving the point, Bill.

Having to look at 100 houses after telling an agent what you want means something's really wrong somewhere.

Having to fire three agents after telling them what you want means something's really wrong somewhere.

I don't think the problem was that you were excessively choosy; I think the problem was a lack of suitable houses, so the agents showed you "almost good enough" houses.

You had the resources and patience to go through all that. Many folks don't. If you spent just 1 hour per house on research, that's over 2-1/2 weeks work before the actual job of buying and moving begins.

> Michael is right: the agent represents the *SELLER*,
> not the buyer. He
> is legally obligated to disclose _some_ things, but professionally
> obligated not to disclose anything else that might lower the house's
> value. Agents are not your friends.

I disagree; they can be. But the main point is that the agent, whether a buyer's agent or a seller's agent, doesn't make any money until a sale happens.

I think all this is having a negative impact on amateur radio. Here'swhy:

1) Lots of people who live in restricted homes never pursue an interest in amateur radio because they don't want the antenna hassle. Not every restricted home has a suitable attic or yard where an antenna can be hidden. Many restrictions are such that flagpoles, birdhouses, awnings and other things are prohibited too. Plus Gladys Kravitz type neighbors who look for *any* infractions (it only takesone).

The effect is particularly strong on young people, who can't just move and whose resources are usually less.

2) Lots of hams who live in restricted homes are much less active amateurs than they would be if they didn't have the hassle.

3) Certain areas become "no-hams" zones, because more and more hams steer clear of them.

4) The publicity and visibility of amateur radio decrease over time, because nobody sees antennas, and hams operating stealth don't talkabout it.

How many of us first discovered amateur radio, or found our first Elmer, by seeing his/her antenna(s)?

For decades the trend in amateur radio has been to make the licenses easier to get, the equipment less expensive, more reliable and higher performing, and the choices of activities greater. But at the same time, there's been a slow but steady trend to make more and more homes ham-radio-unfriendly. That's not a good thing.

I'm not sure how to meet the challenge head-on; we don't have the resources of the satellite-dish folks.

When I decided to move out of the Los Angeles area, My wife and I
spent almost 6 months looking for property online. We had a basic
set of "conditions" to meet (as it were).

I fly out here in June last year to look at the properties and
when I got home told my wife, "I think I just bought the farm."

> How many of us first discovered amateur radio, or found our first
> Elmer, by seeing his/her antenna(s)?

Slight topic drift, but in my case it was because my dad worked
for North American Aviation. He took me to the employee recreation
park and I wandered into the Amateur Radio Club station. W6UUI.
End of story, I was "ruined".

Yes, there is, but it's what we have to work with. All the agents I worked with were of the big picture on the billboard type. It would veer way OT, but my XYL who works in the flooring industry and has regular contact with contractors and RE agent, could tell you stories that would make you hair stand on end. The closest comparison I can make is that there is a strong "carny vs rube" relationship going on. And they are the carney.

> You had the resources and patience to go through all that. Many folks
> don't. If you spent just 1 hour per house on research, that's over
> 2-1/2 weeks work before the actual job of buying and moving begins.

Thanks for proving my point, Jim. I spent a lot of time researching my house. When a house reached "serious status", I took measurements, I talked to the neighbors, I had my lawyer go to the courthouse to check over the deed - in addition to the completely worthless deed insurance they make you buy. And he found an issue that we made the owners pay for. But the point is there is a choice, and if a person lacks the patience to find out what they are buying into, then I don't know how to advise them.

There's the old saying about buy in haste and repent at leisure.

> 1) Lots of people who live in restricted homes never pursue an interest

hehe, I was wondering when Gladys would come up... 8^)

But you brought us back to Ham radio specifically, so that's great.

I agree wholeheartedly. Old Mr Bloom from up the road was my introduction to two way radio. He had a tower with one of those triple vertical dipoles on it that you could switch the pattern on - I forget what they are called. But a friend and I knocked on his door, and politely asked if we could see his radios. He told us to have our parents call him to make sure it was okay, and then we stopped by again to see his shack. Pure magic! Lights and glowing meters and that electronic smell of tubes that whenever I smell tube equipment these days it takes me right back.

Otherwise I agree with all those points.

For as much charm as our introduction to Ham radio was, it is going to be different today.

If we decide that we need to get young people interested in Ham radio, it will have to be in a manner in which they are used to.

I had an idea about making a 2 meter HT that had texting ability, as well as voice. The texting mode would be PSK-31. Note that PSK31 actually does work with FM - it isn't as useful as the SSB version, but it still works. A kid with a Technician license and his/her friends of like qualifications would use these things similarly to cell phones, but it would be their own channels. After starting, the more adventurous might look into repeater construction. Regular Ham type stuff. Eventually they would likely gravitate to HF if they found that interesting.

It would certainly be a different paradigm than what most people who became Hams when very young went through. But we don't have novice class any more, and have to come up with something else.

Some Hams I have pitched this to have been vehemently oppose to the idea.

N2EY@AOL.COM wrote:

> I don't think the problem was that you were excessively choosy; I think the problem was a lack of suitable houses, so the agents showed you "almost good enough" houses.

You go to a real estate agent. You give them your wish list. They do the best that they can to meet it. The chances of them finding a house that meets 100% of your requirements is nil if your wish list is comprehensive.

House buying is a tradeoff. The items on your wish list related to ham radio are no different than anything else. It's as silly to tell a real estate agent that you absolutely must have three bedrooms as it is to tell them that you absolutely must not have a CCR.

Maybe the house for you actually has four bedrooms. Maybe the house for you actually has a CCR but it's something that you can live with. Those are YOUR decisions. If you never see the potential properties, you won't have the opportunity to make the decision.

The key is to find a real estate agent who understands what you're looking for and is able to show you a reasonable number of homes; not everything that might conceivably meet your need, but not rule out something arbitrarily because it is 2002 square feet and your max was 2000.

Yes, CCRs are a real issue for ham radio today. But condemning them as inherently evil isn't going to accomplish anything because it's only a tiny minority of the population that wants to erect a tower in their back yard. Most everyone thinks CCRs are good and in that environment they're not going away. Best to understand how to work within the system.

> I had an idea about making a 2 meter HT that had texting ability, as
well as voice. The texting mode would be PSK-31. Note that PSK31
actually does work with FM - it isn't as useful as the SSB version,
but it still works. A kid with a Technician license and his/her
friends of like qualifications would use these things similarly to
cell phones, but it would be their own channels.

The beauty of that is that if the kids are close enough to work simplex, all
that may be required for an antenna is a small indoor one, and certainly a
5w HT isn't powerful enough to get into a neighbor's electronics. I once had
a Ringo AR-2 hanging from a hook in my apartment ceiling.

In some states, CCRs can be really hidden. For example a builder may buy a portion of land already subject to restrictions. Doing a normal title search usually won't find the restriction, since the builder will seem to be the first to put Conditions, Covenants and Restrictions on that particular piece of land. Incidentally a careful shopper also has to watch out for easements.

I also have to note once again that not every potential home buyer even considers CCRs or understands that a restriction on let's say additional structures might bar a tower even if said tower is attached to the residence. One other problem is numerous municipalities try to ban antennas and fighting that ban can be expensive.

Finally let me note that in some states, a ham who loses a legal fight against a Covenant can not only end up liable for his or her legal costs but those of the party who (i.e. the neighbor or HOA) who brought the suit.

> There's the old saying about buy in haste and repent at leisure.

I suspect most folks are more concerned about location, price and size than antennas, that's true even for most hams I suppose. I don't know how much haste is involved, but focus tends to shorten in such circumstances.

I disagree!

I think it depends on how you write the requirements.

> Maybe the house for you actually has four bedrooms. �
> Maybe the house for
> you actually has a CCR but it's something
> that you can live with. �Those
> are YOUR decisions. �If you never
> see the potential properties, you
> won't have the opportunity to make the decision.

Again, it's a matter of writing the requirements correctly. Most people do not have the time to investigate hundreds of homes and all the details. If they did, they wouldn't need an agent!

There's also the fact that in many situations it's not a one-person decision. If Spouse A has a lot of time and patience but Spouse B does not, looking at lots of homes is liable to cause Spouse B to put pressure on Spouse A to compromise on requirements.

The way I would do it is the following:

First on the list would be the "must haves". These are minimum requirements that cannot be compromised. For example, if I'm set on a house in certain school districts, there's no point in showing me homes outside those districts. If I'm moving in order to have a better antenna farm, there's no point in showing me houses with less ground or anti-antenna restrictions.

Second would be negotiables; things that there could be some compromise on, such as a bathroom near the shack, a multi-car garage,etc.

Third, requirements would be written in the most flexible terms possible. If I absolutely must have three bedrooms, the requirement would be "Minimum of three bedrooms" so that a four-bedroom house wouldn't be ruled out - but a two-bedroom house would be. Same for a lot of other things. A no-farm-animals CC&R would be fine; a no-antennas one is a deal-killer.

> The key is to find a real estate agent who understands what you're
> looking for and is able to show you a reasonable number of
> homes; not
> everything that might conceivably meet your need, but not rule out
> something arbitrarily because it is 2002 square feet and your
> max was 2000.

And part of that is making absolutely clear what's negotiable and what isn't, and not wasting time on homes that cannot meet the requirements.

Ham radio may not be important to everyone, but it's important to me, and what I see are unreasonable rules restricting it.

> Yes, CCRs are a real issue for ham radio today.
>�But condemning them as
> inherently evil isn't going to accomplish anything because it's only > a

> tiny minority of the population that wants to erect a tower in their
> back yard. �Most everyone thinks CCRs are good and in that
> environment
> they're not going away. �Best to understand how to work within
> the system.

The problem is that "the system" is often specifically designed to prevent being worked within.

In my township, there is zoning of every property. Zoning is simply a set of government ordinances, and as such can be changed, amended, varianced, or overlaid with special rules. Nothing in the zoning ordinances is unchangeable, and there are strict limits on what zoning can restrict, because the power of government is constitutionallylimited.

In similar fashion there are "nuisance ordinances" about things like noise and keeping the property in reasonable repair. There are also building codes for safety reasons.

And some properties in my township have deed restrictions, a form of CC&R. These can restrict things much more than zoning can, and can be made unchangeable because they are contracts agreed to upon buying the property - one of which is to require all future owners to do the same. Most deed restrictions cannot be changed or varianced because they're specifically set up not to be.

What I see happening more and more is that deed restrictions and similar one-sided unchangeable contracts are being used to replace zoning, nuisance ordinances and building codes. And I think that's a very bad thing which must be resisted however possible.

Because if we don't, eventually there won't be anyplace left to have an antenna, let alone a tower.

I'm old enough to remember a time when, if you told an American that people were trying to sell homes where you couldn't put a TV antenna on the roof, the response would be "That's crazy; they'll never sell!" And they would have been right. But a little bit here and a little bit there, and now it's not unusual at all.

73 de Jim, N2EY

When I decided to move out of the Los Angeles area, My wife and I
spent almost 6 months looking for property online. We had a basic
set of "conditions" to meet (as it were).

I fly out here in June last year to look at the properties and
when I got home told my wife, "I think I just bought the farm."

> How many of us first discovered amateur radio, or found our first
> Elmer, by seeing his/her antenna(s)?

Slight topic drift, but in my case it was because my dad worked
for North American Aviation. He took me to the employee recreation
park and I wandered into the Amateur Radio Club station. W6UUI.
End of story, I was "ruined".

---------------
Hey Jeff: I thought it was when you stuck the all-metal table knife into
the live electrical outlet as a child that did it.

Do you have specific ideas on how this can be resisted?

American culture has changed a lot during the past few decades. When did we start seeing the McMansions? The idea of "the perfect house" is much different now than 30-40 years ago.

The public votes with its wallet. As you point out, if there was general displeasure with CCRs, houses with CCRs wouldn't sell. I don't see any evidence that CCRs significantly reduce the sales potential of the property involved, and their growth suggests that the general public views them in a positive light.

You may perhaps think my views are pessimistic; I prefer to consider them realistic. As a tiny minority, hams are unlikely to have any effect on the trend to attach CCRs to property. That's why I think it's better to know as much about the system as possible and learn how to work within it. Yes, it can be difficult to work within it. There are many things in life that are neither easy nor ideal.

73, Steve KB9X

Our part is to point out the inadvertent problem caused by the antenna restrictions, and to see if we can get legislative action. Whether it be that proposed antennas be given a review process, or some other such hoops to jump through, we should be accommodated. And in those neighborhoods there will be some opposition. There is no doubt that some people won't like it. Lot's of people don't like antennas because they've been told they don't IMO. My wife doesn't like antennas, but she really can't tell me exactly why. In the end it 's some vague comment about "ugly". Yet to me, an antenna is a pretty cool looking thing, certainly more attractive than a ceramic yard gnome.

I'm sympathetic to the problems of Hams who live in CCR antenna restricted 'hoods, even if I think they didn't have to be there in the first place.

So it's going to be a combination of things:

Work within the legislative system to mitigate antenna restrictions.

Don't live in a neighborhood that has such restrictions in the first place.

But if you do, you might become an officer in the HOA for a while. Some times surprising accommodations can be made.

And who knows, there were people who made some publicity like the fellow who's HOA wouldn't let him put a nice little weather hut for his kids to stand in while waiting for the school bus. The yard full of pink flamingos he planted were perfectly "legal" however. The HOA relented, he put up the hut, and the flamingos went away.. Same with the fellow they wouldn't allow to put up a flag pole. Often times there are little "things" you can do. But in both of those examples, I would not want to live in a neighborhood where some odd aesthetics make it okay for my children to freeze to death, or make it some sort of crime to display my country's flag, I mean, those are people I don't want to be around at all.

==> + PUBLIC SERVICE: HAITIAN AGENCY ANNOUNCES CONTACT INFORMATION FOR AMATEURS GOING TO HAITI TO PROVIDE DISASTER RELIEF

The offices of CONATEL -- Haiti's national telecommunications regulator -- were destroyed in the January 12 earthquake that devastated the island nation. This office, like the FCC in the US, administers the Amateur Radio Service in Haiti. Hams interested in traveling to Haiti to help provide communications support have been at a loss as to whom to contact. CONATEL has set up temporary offices in a Port-au-Prince suburb and has indicated that those volunteers who wish to operate in Haiti to assist with disaster relief need to contact the agency to get formal reciprocal operating clearance. Read more here <http://www.arrl.org/news/stories/2010/01/26/11310/?nc=1>.

==> + PUBLIC SERVICE: ARRL SENDS HAM AID EQUIPMENT TO HAITI

While the communications infrastructure in earthquake-ravaged Haiti is being rebuilt, there is need for Amateur Radio communications. To assist in this effort, the ARRL's Ham Aid program is providing equipment for local amateurs to use. On Friday, January 22, the League sent a programmed Yaesu VHF repeater with a microphone, as well as ICOM handheld transceivers, Yaesu mobile 2 meter rigs with power supplies and Kenwood mobile 2 meter rigs. Comet antennas, Larsen mobile antennas with magnet mounts, coax and batteries were also included in the package. Most items were donated by their manufacturers; the repeater and power supplies were purchased by the ARRL several years ago using post-Hurricane Katrina grant funds.

On January 25, Doug Lapin, K1OY, the Dominican Republic's Ambassador Accredited to the Secretary of State of Foreign Relations, stopped by ARRL Headquarters on his way back home. When he left, he carried with him 10 Kenwood handheld receivers, courtesy of the League's Ham Aid program. "We're making progress," Lapin told the ARRL on January 27. "The [Ham Aid package you sent] is stuck in customs. I'm working on getting it out. Members of the Radio Club Dominicano were much appreciative of the radios I brought and found it funny that my hand-carried radios arrived before the package. If we get it out, we will go back to Haiti tomorrow with the equipment."

Read more here <http://www.arrl.org/news/stories/2010/01/22/11304/?nc=1>, including information on how you can help the Ham Aid program in Haiti.

==> + ARRL LEADERSHIP: KENT OLSON, KA0LDG, APPOINTED DAKOTA DIVISION VICE DIRECTOR

In one of her first actions as ARRL President, Kay Craigie, N3KN, has appointed Dakota Division Assistant Director and former North Dakota Section Manager Kent Olson, KA0LDG, as the new Dakota Division Vice Director. The position became vacant when Dakota Division Director Jay Bellows, K0QB, was elected International Affairs Vice President at the 2010 ARRL Board of Directors Annual Meeting and Vice Director Greg Widin, K0GW, moved into the Director position. Read more here <http://www.arrl.org/news/stories/2010/01/25/11307/?nc=1>.

==> FCC NOTICE OF PROPOSED RULE MAKING TO REVISE AND CLARIFY VANITY CALL SIGN RULES OPEN FOR COMMENTS

Late last year, the FCC issued a Notice of Proposed Rule Making <http://www.arrl.org/news/stories/2009/11/25/11220/?nc=1> (NPRM) -- WT Docket 09-209 <http://edocket.access.gpo.gov/2010/pdf/2010-1262.pdf> -- seeking to amend the Commission's Amateur Radio Service rules to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations. Interested parties may make comments on the NPRM in the following ways: via the Federal eRulemaking Portal <http://www.regulations.gov> or via the FCC's Web site <http://www.fcc.gov/cgb/ecfs/>. Comments must be submitted by March 26, 2010; reply comments are due no later than April 12, 2010.

==> + THE DOCTOR IS IN: TUBES AND TUBE REPLACEMENTS

Rick Richardson, VE7WF, of New Westminster, British Columbia, recently has acquired some vintage vacuum tube-based equipment. He recalled that years ago, there was a product on the market -- Tubesters -- solid state replacements for vacuum tubes. He asked the ARRL's Doctor if anyone still manufactures such devices.

Here's what the Doctor had to say:

I do remember them, as well. If I recall, these were popular in the 1970s. To my knowledge, they are no longer available. You may find some on Internet auction sites from time to time. But before you go too far in that direction, I would think about what problem you are trying to solve. Old tube gear works very well with tubes, probably with better performance than "force fit" solid state replacements. In those days, many solid state receivers were quite vulnerable to overload and other problems, for example.

The nice thing is that most tubes are still available, often unused in original boxes and generally at similar prices to what they cost 50 years ago. An Internet search will turn up a number of places that sell tubes. I've always had good luck with Antique Electronic Supply <http://www.tubesandmore.com/>. If used within their ratings, tubes can last many years. I have WW2 vintage equipment that still works with some original tubes. I also have Drake tube based equipment from the period still going strong.

ARRL Lab Engineer Bob Allison, WB1GCM -- an amateur with years of dedicated experience with vintage gear -- notes that if the equipment has sat around for many years, the chances are the tubes are gassy. The glass part of a tube is not a perfect envelope. One molecule of air at a time leaks into the tube and after a few years, the performance degrades. If a tube hasn't been used in 20 or 30 years, it can appear to be totally dead. The trick to solve this to let the radio run for a day or two. The filaments in the tubes will eventually burn away whatever air is inside and the tubes will often be back in good shape.

The only exception that I often make is to replace power rectifiers with plug-in solid state equivalents. I usually make my own, but they are also commercially available. My rationale is that rectifier tubes generate a lot of heat the old gear doesn't need. In addition, the filaments can draw 15 to 20 W and by removing that load from the power transformer it should stay cool and last longer. Unlike tubes, power transformers are not so easy to find. If needed, the original condition can be restored by unplugging the solid state unit and putting the tube back.

Thanks Doctor! Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST <http://www.arrl.org/qst> , the official journal of the ARRL.

==> + ARRL AUDIO NEWS TEMPORARILY SUSPENDED

With the coming of the new ARRL Web site, we are looking at ways to better bring you Amateur Radio news. In order to do this properly, we will be temporarily suspending the ARRL Audio News while we look for solutions that will enable us to provide the technical quality and distribution channels that you expect from the ARRL. The last edition of the ARRL Audio News (for now) will be produced on Thursday, January 28.

==> + NOW YOU KNOW!: PHIL "GIL" GILDERSLEEVE, W1CJD

By ARRL News Editor S. Khrystyne Keane, K1SFA

Longtime readers of QST will certainly remember the cartoons of Phil Glidersleeve, W1CJD (ex-1ANE). Known affectionately as "Gil," he drew more than 1500 cartoons for the ARRL, many of them appearing on the pages of QST.

Gil started cartooning for the ARRL back in June 1927. His characters -- such as Jeeves the Butler and the gang at the Podunk

Hollow Radio Club -- became old friends to readers of QST. Gil's first Jeeves cartoon was published in February 1940: From the other room comes his master's voice, saying, "Jeeves, come here and help me look for DX!" Jeeves, not really sure what exactly DX is, comes on the run with a road map, a telescope, binoculars, a lantern, a compass and a butterfly net in hand! As a native of the great state of Texas, my favorite Jeeves cartoon shows him trying to push a giant QSL card (from Texas, of course!) through the door -- the card can barely get through. Of course, things are bigger in Texas! If you ever tour ARRL Headquarters, you can see a large version of this cartoon in the second floor hallway.

The mythical Podunk Hollow Radio Club depicted the idiosyncrasies of a group of radio enthusiasts getting together. The cover for the June 1964 issue of QST shows the Podunkers -- hundreds of them -- happily camped out in a forest setting. In the large tent in the rear, several hams are operating their radios. In the foreground, several more are chatting up a couple of attractive girls in a convertible, little cartoon hearts fluttering over one ham's head. And off to the far right, the Department of Conservation is beginning to set up their blasting apparatus with its accompanying signs of "Turn off all two-way radios!"

But Gil also used his cartoons to teach proper on-the-air behavior. In March 1938, he drew an eight panel cartoon of a man calling CQ on CW. Each panel had the man getting older, where by the seventh panel, he was old, bald and with a long beard, spider webs all around. The last panel showed a tombstone that read "Here lies C. Q. McGall. He died without even signing his call." The next month, Gil drew a single panel cartoon with a line separating the panel into two parts. In the first part, he showed a radio amateur "all worn to a frazzle" from handling so much traffic, as well as dealing with QRM. The second half showed two amateurs handling traffic as a team, "all full of vim and vigor." Gil's point was spot-on: "Cooperative operating does a better job with greater efficiency all around. Instead of harassed, inefficient, overworked operators, put key stations on a 6 or 8 hour basis, with relief and second operators for efficiency during intensive operation."

Gil's interests were not limited to ham radio. A native of Portland, Connecticut, he began working for the Middletown (CT) Press as the Portland correspondent in 1940, became county editor in 1943 then city editor in 1945. Sometime later, he was named news editor. His cartoons also decorated the Press and various trade journals. He served in the volunteer fire company and was captain of Fire Company No 2 for nine years, as a member of the Portland Board of Education for eight years, and as a vestryman in his local church.

In 1966, he was chairman of Portland's 125th anniversary celebration. As part of the celebration, he drew the town seal, depicting a number of elements of historical Portland. Foremost is an old-time oxen driver with his team, pulling a large brownstone sling; the greater part of Portland's 19th century wealth came from the brownstone industry. To the left of the oxen is a small building like those visible in old pictures of the quarries. Its tall chimney is smoking, connoting industry. To the right is another such building atop the quarry wall with a pulley for lowering things into the quarry.

<http://www.arrl.org/catalog/?item=0364> Gil passed away on November 4, 1966. "His work became a tradition," wrote former QST Managing Editor Laird Campbell, W1CUT (SK) in the foreword of Gil: A Collection of Classic Cartoons from QST <http://www.arrl.org/catalog/?item=0364>. "His knack for expressing ideas, feelings or situations unique to Amateur Radio was, and still is, unexcelled. [He] could take a rudimentary idea and turn it into a final masterpiece through the uncanny strokes of his pen. Gil's creations will never be forgotten...his conceptions remain alive in the minds of both old-timers and newcomers to Amateur Radio." Now you know!

==> SOLAR UPDATE

Tad "Who countest the steps of the Sun <http://www.poetryfoundation.org/archive/poem.html?id=172905>" Cook, K7RA, reports: We've seen average daily sunspot numbers for this reporting week. Since last Thursday through yesterday, the numbers rose more than 9 points to 28; the average solar flux slipped more than 2 points to 81.9. Geomagnetic indices were a tiny bit lower. We should be seeing sunspot numbers decline over the next five days. The predicted solar flux for January 28-31 is 78, 80 on February 1-2, 82 on February 3-4 and 88-89 for the following six days. We don't see any geomagnetic upset predicted until February 16, with the planetary A index only rising to 10. On the STEREO image <http://stereo.gsfc.nasa.gov/>, we can see sunspot 1041 in the Sun's southern hemisphere, past the central meridian. We also see a sunspot emerging from the unseen area of the sun (currently around 12.5 percent, not visible yet to the STEREO mission) that is perhaps five days from emerging over the Sun's eastern limb. Look for more information in the Solar Update -- including some clarification, correction and expansion of the info in last week's bulletin <http://www.arrl.org/news/stories/2010/01/22/11302/?nc=1> concerning SID (Sudden Ionospheric Disturbance) events from Dick Grubb, W0QM of the Space Weather Prediction Center in Boulder, Colorado -- available on the ARRL Web site on Friday, January 29. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by William Blake's Ah! Sunflower <http://www.poetryfoundation.org/archive/poem.html?id=172905>.

==> THIS WEEK ON THE RADIO

This week, there is a running of the NCCC Sprint on January 29. The CQ 160 Meter Contest (CW) is January 29-31. The REF Contest (CW), the UBA DX Contest (SSB) and the SPAR Winter Field Day are January 30-31. The Classic Exchange (CW) is January 31-February 1. Next week, there is another running of the NCCC Sprint Ladder on February 5. Look for the FYBO Winter QRP Sprint, the Minnesota QSO Party and the AGCW Straight

Key Party on February 6. The Vermont QSO Party, the YL-ISSB QSO Party (CW), the 10-10 International Winter Contest (SSB), the British Columbia QSO Party, the Delaware QSO Party and the Mexico RTTY International Contest are February 6-7. On February 7, check out the North American Sprint (CW) and the ARCI Fireside SSB Sprint. The New Mexico QSO Party is February 8. The ARRL School Club Roundup <http://www.arrl.org/SCR/> is February 8-12. The NAQCC Straight Key/Bug Sprint is February 10 and the CWops Mini-CWT Test is February 10-11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, February 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, March 5, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1694 - January 29, 2010

Amateur Radio Newsline report number 1694 with a release date of
Friday, January 29, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in Hawaii gear up to back a law that will insure their right to operate mobile, earthquake relief efforts in Haiti switch from HF to VHF, the ARRL Board discuses a lot of rescue radio and accolades from the QCWA to a ham who has given his entire life to the hobby, His name is Harry Dannals, his call is W2HD, and you can find out the details on Amateur Radio Newsline(tm) report number 1694 coming your wayright now.

(Billboard Cart Here)

**

RADIO LAW: HAWAII HAMS ASKED TO SUPPORT MOBILE CELL LAW THAT EXEMPTS AMATEUR RADIO

Hams in Hawaii are being urged to support a state measure that while banning the use of hand held cellular phones does exempt hams and other users of mobile two-way radios. This, according to Ron Hashiro, AH6RH, who tells Newsline that support from the ham in the street is crucial to its passage:

--

AH6RH: The State Legislature in Hawaii has submitted House Bill Number 2225 that mirrors the cellphone bill that is active in Oahu. It is vital that all hams in Hawaii take the time now to write or e-mail their state representatives to support amateur radio in this bill.

"Also, they should take the time to submit testimony to the House Committee on Transportation. As of yet there is no hearing date set, but as soon as that takes place I'm sure that the amateurs will make support their right to operate their radios while mobile."

--

Hashiro says that with a strong showing of support from the Hawaiian ham radio community that this bill has a good chance to become law:

--

AH6RH: "I'm pretty sure that we can continue the exemption for amateur radio because of the hard work that was done on Oahu and (both) the testimony and the impact of amateur radio during Hurricane Iniki, during the earthquake of 2006 and even during a recent island-wide generator power outage. Once again the community has seen the value of amateur radio and this is something that the council members have recognized."

--

According to AH6RH, this bill, if passed into State law, will override the ordinances and bills at county levels. Hams in Hawaii and those around the world interested in keeping track of this pending legislation can follow at http://www.capitol. hawaii.gov/ session2010/ gethearing. asp?query= HB2225 (AH6RH, KH6QX)

RESCUE RADIO: HAITI HF EMCOMMS WINDING DOWN

Long distance amateur radio communications into and out of quake-ravaged

Haiti is quickly disappearing as we hear from Amateur Radio Newsline's Bruce Tennant, K6PZW:

--

As the recovery in Haiti continues, the need for international ham radio communications on the High Frequency bands is winding down. In the weeks since the quake, Haitian telecommunications personnel and international relief workers have been doing all they can to rebuild communications into and out of that nation.

International telecommunications companies have brought in portable cellular telephone nodes and numerous transportable satellite ground stations. And according to news reports here in the United States, at least one geosynchronous communications satellite has been repositioned as a dedicated international communications link to and from Haiti to carry telephone, data and video. Because of this an all clear has been issued for almost all the frequencies on 75, 40 and 20 meters that had been in use during the initial phase of the post earthquake recovery effort.

According to a news release from the International Amateur Radio Union Region 1, as of 1800 UTC on January 22nd, the frequencies of 14.300, 14.265, 7.045, 7.065, 7.265, 3.720 and 3.977MHz were returned to normal use. Also, and the groups who have been passing messages on those frequencies were to revert to monitoring mode or to their normal operations.

And a similar release comes from Dr. Cesar Pio Santos, HR2P. Santos is the IARU Region 2 Emergency Coordinator and his statement announced the release of several H-F frequencies including 7.045 and 3.720 MHz for normal use.

That said, the IARU wants to remind hams worldwide that there are still a number of radio amateurs in the Haiti who are attached to various relief groups. These hams may still be heard on the amateur bands on a number of frequencies according to their particular needs and to maintain contact with their home countries. The IARU asks that you listen before transmitting on frequencies known to handle Haiti relief traffic.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Giving priority to earthquake relief communications is expected of all of us. (ARNewsline(tm), ARRL, Others)

**

RESCUE RADIO: HAITI HAM RADIO EMCOMM EMPHASIS NOW GOES VHF

While the requirement for log distance high frequency ham radio communications to and from Haiti is quickly coming to an end, the need to expand lines of communications within that nation are ever increasing. Bill Pasternak, WA6ITF, is in the newsroom with this part of the story:

--

While both cellphones and text messaging nodes are being installed in Haiti as fast as humanly possible, these are primarily being used for international communications by aid workers. And with Haiti's in country communications infrastructure years from full reconstruction, ham radio on 2 meter FM is quickly becoming a primary communications lifeline for relief operations.

As reported last week, hams from the Dominican Republic risked their lives trying to restore ham radio communications in Port au Prince. They had to retreat but were able to set up several repeaters near the Dominican Republic's border with Haiti that when linked give coverage of the entire Haitian nation. These machines were quickly pressed into service by the Red Cross and likely other relief agencies.

Also, a D-Star repeater was supposed to be on its way to Port Au Prince, but at airtime its not known if the group that was supposed to deliver and install it has yet arrived.

But more communications channels across Haiti are still needed. To help in this area, on Friday, January 22, the American Radio Relay League sent a programmed Yaesu VHF repeater with a microphone, as well as ICOM handheld transceivers, Yaesu mobile 2 meter rigs with power supplies and Kenwood mobile 2 meter rigs down to Haiti via the Dominican Republic's national ham radio society. The supplies shipped also included Comet antennas, Larsen mobile antennas with magnet mounts, coax and batteries. All of these items were from the ARRL's Ham Aid program. This gear had been donated by their respective manufacturers out of concern for the situation in Haiti.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The gear was sent to the Radio Club Dominicano via its president for distribution most likely because it is still impossible to know the level of survival of hams within Haiti or their ability to provide in country emergency communications services to that quake ravaged nation. One thing that is desperately needed by the Radio Club Dominicano is funding to purchase a generator to power the repeaters. If you can help in this, please contact Allen Pitts, W1AGP, at ARRL Headquarters. The phone number is 860-594-0200 and his e-mail is W1AGP at ARRL dot org. (ARNewsline(tm), ARRL, Others)

**

RESCUE RADIO: OBTAINING PERMISSION TO OPERATE IN HAITI

And be it on H-F or VHF, amateurs wishing to operate in Haiti to assist with disaster relief will need to contact that nations telecommunications regulator to get formal reciprocal operating clearance. Don Wilbanks, AE5DW, reports:

--

If you are a ham who has been asked to come to Haiti to operate on behalf of earthquake relief operations, you will need to get a temporary reciprocal operating permit from the Haitian government. To accomplish this, CONATEL which is an acronym for Haiti's National Council of Telecommunications has set up temporary offices and now has phone and e-mail service available. This, to clear those who may respond to the need for communications volunteers.

In a press release, CONATEL says that it has set up a satellite office of at Number 97 of the Avenue Panam�ricaine in P�tion-Ville with the goal of assuring the continuity of its work. This arrangement says the agency will allow, among other things, better coordination for establishing a temporary emergency telecommunications network in Haiti.

Anyone who needs to operate radio equipment in Haiti is asked to contact CONATEL at its temporary address or by phone throughout the day. This by dialing international calling code 011, then the Haitian country code 509 followed either by 3454-0541, 2516-0000 or 3702-1414. CONATEL can also be reached by e-mail to techommunication@yahoo.fr or info@conatel.gouv.ht.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, near New Orleans.

--

No matter how you contact CONATEL it is imperative to do so before any use of telecommunications equipment or the spectrum resources in Haiti. This, the agency says is to avoid interference problems and possible conflicts between the incumbent operators established in Haiti and those who are newly operating in what CONATEL calls an unusual circumstance. (ARNewsline(tm), ARRL, Others)

HAM RADIO POLITICS: ARRL BOARD OF DIRECTORS LOOKS AT EMCOMM AND OTHER ISSUES

The ARRL Board of Directors held its 2010 Annual Meeting on January 15th and 16th in Windsor, Connecticut with emergency communications front and center on the agenda. Amateur Radio's Mark Abramowicz, NT3V, takes a look at what was accomplished:

--

Three major steps taken by the board on the topic surround the appointment of an advisory committee; signing a memorandum of understanding with the American Red Cross; and proposing a revision in the federal regulations related to amateurs and participation in emergency communications drills on behalf of an employer.

After rejecting the idea of an advisory board at it's meeting last July, the board did an about face and appointed just such a committee.

It's expected that the Emergency Communications Advisory Committee will play a large role in helping to shape ARRL board policy on a primary mission of the amateur radio service - being prepared to respond in times of emergency or disaster both here and abroad.

The second step, signing of a Memorandum of Understanding with the American Red Cross - appears to resolve the thorny issue of criminal background checks required by the organization for all volunteers.

Several amateur radio volunteers expressed concern that the contractor hired by the Red Cross to do such background checks had far too much latitude in the kind of information it could gather - including credit reports and other personal information.

The M-O-U now gives Amateur Radio Emergency Service volunteers permission to obtain and pay for their own criminal background check from a law enforcement agency rather than submitting to the scrutiny of the Red Cross' private contractor.

The agreement also requires the Red Cross to give ARRL members this information to give them an opportunity to make an informed decision as to whether they want to volunteer with the Red Cross.

Finally, the board directed ARRL staff to petition for a change in Section 97.113(a)(3) of the FCC rules related to amateurs taking part in emergency preparedness or disaster drills.

It wants to give radio amateurs the ability, on behalf of an employer, to take part in such activities.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The complete Minutes of the 2010 Annual Meeting of the ARRL Board of Directors will be available soon on the ARRL Website. That's in cyberspace at www.arrl.org. The next meeting of the ARRL Board of Directors is scheduled for July 16th and 17th. (ARNewsline(tm) from ARRL release)

**

RESCUE RADIO: FCC GRANTS ANOTHER 97:113 EMCOMM WAIVER REQUEST

The FCC has granted a yet another request for a waiver of Section 97.113 of its rules. This from the Grundy County Emergency Management Agency in Morris, Illinois to use the services of four ham radio operators in its employ to take an active part in several upcoming emergency preparedness drills.

In granting the waiver the FCC specifically stated that it would permit Jim Lutz, N9UCP; Joe Schroeder, KC9JYZ; Chris Kindelspire, KC9GCK; and John Watters, KC9KKO to take part in these exercises slated for March 24th and July 28th at various locations in Grundy County. In granting the request the FCC noted that while Section 97.113(a)(3) of its rules normally prohibit hams in an agency's employ to take part, it granting the waiver request as being appropriate under the circumstances presented in the Grundy County Emergency Management Agency's filing. You can read the entire text of the waiver grant at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-10-124A1.doc (FCC)

**

RESCUE RADIO: ALABAMA HAMS SAY THAT THEY SAVE THE COUNTY THOUSADS OF DOLLARS

According to a January 20th report in the Athens Alabama News Courier, ham radio operators have saved the county over a hundred thousand dollars. This, through their volunteer emergency communications expertise.

The article quotes Joe Ivey, W4JSI of the Limestone Amateur Radio Emergency Service as telling the County Commission that his organization contributed $136,625.47 in services to the community in the last calendar year. Ivey said that this tops the previous year donated service value by $8,000.

Ivey noted that what the club does is at no cost to anyone. He added that local hams perform communication for organizations from the Emergency Management Agency to the Christmas parade..

County Commission Chairman David Seibert thanked Ivey and the Limestone Amateur Radio Emergency Service for the valuable public service that they perform. (eHam)

**

RADIO LAW: FCC BANS 700 MHz WIRELESS MICS AS OF JUNE 12TH

The FCC has prohibited the further distribution and sale of devices that operate in the 700 MHz band. This, to clear this spectrum for public safety and 4th generation or 4 G consumer communications gear.

In its January 15th release, the FCC says that the spectrum in the 700 MHz band had already been auctioned to several wireless service providers following the June 12, 2009 Digital television transition. It also notes that its Order and Further Notice of Proposed Rulemaking primarily affects wireless microphones and those who operate them.

The FCC says that a sunset period running through mid-June of this is being provided for those currently using 700 MHz wireless mics. As of June 12, 2010 use of those devices will be prohibited. More on this story is on line at www.fcc.gov/cgb/wirelessmicrophones. (FCC)

**

RADIO LAW: FCC ASKS CONGRESS FOR ADDITIONAL MONTH ON BROADBAND PLAN

The chairman of the Federal Communications Commission is asking for a one month extension on the mandate that his agency has develop a national broadband plan that it is required to submit to Congress.

The creation of such a blueprint was mandated by last year's economic stimulus bill. It was due to lawmakers by Sunday, February 17th. But the FCC is now asking for an extra month to finish digging through the massive volume of public comments that it has received over the past 11 months on how to make universal broadband a reality. The staff involved in preparing the plan also wants more time to brief the FCC's five commissioners and members of Congress.

The request for an extension needs to be approved by the Senate and House Commerce Committees. They are the bodies in Congress which have jurisdiction over the FCC. (Published news reports)

**

ENFORCEMENT: $51 MILLION JUDGEMENT IN SAT-TV SOFTWARE CASE

It's the biggest judgement ever issued against an individual for helping others to obtain pay television without paying the monthly fee. Amateur Radio Newsline's Don Carlson, KQ6FM, is in Reno, with the rest of the story:

--

The Dish Network, EchoStar and NagraStar satellite services have won a $51 million dollar judgement against one Robert Ward. This, after a federal judge in Tampa, Florida, found that Ward had posted software on the Internet that would permit people to receive subscription satellite TV without paying a fee.

The three plaintiffs said the summary judgment ruling made two significant findings that will strengthen their companies' ability to pursue cases like this in the future. First the court held that the posting of illegal software constitutes a violation of the Communications Act. Second that the statutory damages in the case should be calculated based on how many individuals downloaded the illegal software.

There is a reality side to this matter. That being weather or not any of the plaintiffs will be able to collect any or all of the $51 million dollar judgement against Ward remains to be seen.

I'm Don Carlson, KQ6FM, in Reno.

--

Collect it or not, the amount of the judgement and its implications to future cases of this type has send what can best be called shockwaves through the on-line communities that believe that they have a legal right to decode and watch pay television stations free of charge. More on this matter is on-line at http://www.rbr.com/tv-cable/19881.html (RBR)

**

CHANGING OF THE GUARD: FORMER FCC COMMISSUIONER JAMES QUELLO - S.K.

Former FCC Commissioner and Interim FCC Chairman of the Federal Communications Commission, James H. Quello died Jan. 25 of heart and kidney failure at his home in Alexandria, Virginia.

Quello, who was often called the informal dean of the commission, joined the body in 1974 and was named Interim Chairman in 1994. While a commissioner Quello was best known as a strong defender of free, over-the-air broadcasting . But while he exited the commission in 1997 Quello kept his hand in the business and policy that had been his life. He had most recently been a public policy consultant for the law firm of Wiley Rein and Fielding working alongside former FCC Chairman Richard Wiley. He was also the founder and chairman of the board of the James H. and Mary B. Quello Center for Telecommunication Management and Law at his alma mater of Michigan State University.

James Quello is survived by his sons, James M. and Richard B. Quello, his wife, Kim, granddaughters Susan Butler Quello and Diane Watson, and a great granddaughter, Bethany Watson. Interment will be held at Arlington National Cemetery. He was 95. (B & C)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: HARRY DANNALS, W2HD, NAMED PRESIDENT EMERITUS OF THE QCWA

A name synonymous with ham radio for over seven decades has become only the third person ever elevated to the post of President Emeritus of the Quarter Century Wireless Association. This as the organization names Harry Dannals, W2HD, of Charlottesville, Virginia to this truly prestigious standing.

Perhaps best known for his decade from 1972 to 1982 as president of the American Radio Relay League, Harry also served as President of the QCWA from 1989 to 1994. As such he is the only person to have ever held this leadership position in both organizations.

In addition to his work with both the QCWA and ARRL where he also holds the status of President Emeritus, the former W2TUK is a Fellow in the Radio Club of America, a member of the Society of Wireless Pioneers, the Old Old Timers Club, and the Veteran Wireless Operators Association. In 2002 he was inducted into the CQ Magazine Amateur Radio Hall of Fame.

Harry Dannals elevation as President Emeritus of the Quarter Century Wireless Association was announced on January 22nd. The only other ever elected to this position within the QCWA were Leland W. Smith, W5KL, and Lewis 'Mac' McCoy, W1ICP, both of whom are now Silent Keys.

In making the announcement, QCWA President Bob Roske, N0UF, said that he had earlier in the day spoken with W2HD. He told Newsline that Harry was very happy to receive the honor. N0UF added that this is the first time in a long time he actually heard a smile! (QCWA)

**

NAMES IN THE NEWS: RICHARD FISHER KI6SN NAMED NEW EDITOR OF WORLDRADIO ONLINE

CQ Communications, Inc. has announced that veteran journalist and writer Richard Fisher, KI6SN, has been named the new Editor of WorldRadio Online, effective with the April issue.

The 59 year old Fisher recently completed a 35-year career in newspaper print and online journalism. This, in a variety of reporting, editing and management roles. He also has a 17-year association with WorldRadio, first joining the magazine in 1993 as its QRP columnist. This is a post he held until the magazine's transition from print to online in February 2009.

Fisher is currently a columnist for three magazines published by CQ Communications. In addition to his WorldRadio Online editing duties, he will continue to write the "Washington Beat" column for Popular Communications, the "Public Service" column for CQ Amateur Radio, and the "Trail-Friendly Radio" column for WorldRadio Online.

Fisher will succeed Nancy Kott, WZ8C, who has been Editor of WorldRadio and WorldRadio Online for the past eight years. After guiding Worldradio from print to electronic publication she announced her impending departure in the February issue of the on-line magazine. (CQ)

HAM RADIO IN SPACE: SUMBANDILLASAT TEMPORARILLY SUSPENDS OPERATIONS

The Amateur Radio FM transponder on the SO-67 SumbandilaSat ham radio satellite has been temporarily suspended. This, to permit completion of the satellite commissioning activities

According to Jan Albert writing on the On the AMSAT bulletin board, there is little more than 6 weeks left in which to complete the commissioning activities on SumbandilaSat before operations are planned to be handed over in middle-March to the Satellite Application Center. That's who will then continue to operate the satellite on behalf of the Department of Science and Technology which actually owns the satellite. Since progress is currently hampered by the various South Africa AMSAT payload activities,

Albert says that there is no choice but to temporarily suspend this service on SO-67. He adds that plans are to have SO 67 back on the air by the end of March or sometime in early April. So far SumbandilaSat has successfully executed more than 320 payload activation's since hams began using the ham radio payload at the end of 2009. (ANS)

HAM RADIO IN SPACE: NEW AO-7 AMERICAS QSO DISTANCE RECORD

A new distance record has been set within the Americas over an aging ham radio satellite. On Sunday January 24th at 22:52 UTC Joe Spandler, K3SZH in Harrisburg, Pennsylvania, held a short contact with Francisco Ramires, PY2OV in Sao Paulo, Brazil using the 70 cm to 2 meter transponder on the 35 year old AO-7 ham-sat. The distance between the two stations was 7738 km and is believed to be the furthest contact within the Americas, but falls just short of the ZS6BB to EA6SA international contact at a distance of 7766 km. ZS6BB to EA6SA stands as the record for the AO-7 bird which was launched on November 15, 1974 on board a Delta rocket from Vandenberg Air Force Base in California. (Southgate)

**

WORLDBEAT: SV2SAP SAYS RETURN SY TO MT ATHOS

Mount Athos resident radio amateur, Monk Apollo, SV2ASP/A is calling for the return of SY prefix to the monastery`.

For many years the prefix 'SY' was assigned exclusively to the DXCC entity Mount Athos in Greece. This was later changed to 'SV/A' but for many radio amateurs the SY prefix is still connected only to Mt Athos, although every Greek radio amateur may apply for a SY prefix.

According to the Southgate News, this is a thorn in the side of Monk

Apollo. And now he is asking DXers from all over the world to send an e-mail to the Greek licensing authority at yme@otenet.gr that asks it to stop this practice.

At the moment Monk Apollo is active mainly on RTTY because this mode is silent and does not disturb the other monks. He prefers operating on 160 through 30 meters from 1700 to 2100 UTC. However be aware that his SV2ASP/A call was used by a pirate operator at least once this year on January 12th. (Southgate)

**

DX

In D-X, word that a group of radio amateurs across Spain will activate the special callsign AO1ANT between February 22nd and the 28th to celebrate the 'Seventh Antarctic Week' international event. Their reference number will be WAP-180 and their activity will be on SSB, CW, PSK31 and RTTY modes, using all the amateur bands from 160 through 10 meters. QSL via EA1GHT, either direct or by the Bureau.

And lastly, XR9JA will be the callsign of the upcoming Greenwich Island operation by XQ5CIE, CE6UFF, F6DXE and CE5COX. The operators will be there from February 1st to the 28th using CW, SSB, and PSK-31 on 160 through 6 meters. They also plan satellite operation using AO-51. QSL via CE5JA either direct or via the bureau.

(Above from various DX news sources)

THAT FINAL ITEM: A FINANCIAL HEALTH UPDATE ON NEWSLINE

And finally this week, we have a brief update on Amateur Radio Newsline's financial health. Here again is our President and Producer, Bill Pasternak, WA6ITF:

--

Before I go any further, I want to thank each of you who sent notes and e-mails of condolence on the passing of our Treasurer and Support Fund Administrator Andy Jarena, N6TCQ. It made us feel good to know that so many of you felt toward Andy the way that we did.

It has been a very busy several weeks for me after taking on the added role of interim treasurer after Andy left us. Nor was it a very happy time because Andy was one of my closest and dearest friends for over two decades. And I was honored to have been asked to represent his world of interest in amateur radio at a celebration of his life that his life partner Judy Hurst and his sister Ann Albertson held in his memory on Saturday January 23rd.

In keeping with Andy's desires, this was not a sad gathering. Rather it was a group of people whose lives had cross Andy's and who remembered him with sincere fondness, friendship and warmth. And in retrospect, for many of us it was that catharsis we needed to close this chapter of our lives by being able to publicly say goodbye to our friend who had been an inspiration to all of us.

On another topic, I and the entire Amateur Radio Newsline production team want to thank those of you who heard our emergency funding plea and made a contribution. Thanks to you caring and thanks to your coming to our financial rescue we have made it through January and have enough to hold us thorough at least the first few weeks of February. After that -- well -- it remains to be seen, but for the next few weeks we should be OK.

Last but by no means least, we wish we had the resources to send each of you a personal note or card to thank you. Unfortunately we do not have that luxury. So, from the collective hearts of all of us at Amateur Radio Newsline we send our "thank you" in this way. Over the Internet. Over the telephone and over the airwaves, It comes from our sincerest gratitude to which Ill add that having you as listeners and supporters makes us feel truly blessed.

I know that Andy said this many times in the past, but please permit me to say that you are not just an audience, You are in your own way, a vital part of what we like to the Amateur Radio Newsline family and we are truly fortunate to have you on our team.

Again, I say thank you -- and for this week -- 73.

I'm Bill Pasternak, WA6ITF.

--

Than you Bill. (ARNewsline(tm))

> something's really wrong somewhere.

At the time, there was a speculative bubble, and many homeowners expected unreasonable prices for their property. In addition, I had certain requirements not germane to this discussion due to physical challenges, and there was also the threat of certain neighborhoods being used as dumps for potentially toxic waste being dredged up from Boston's "Big Dig" construction projects. Since agents refused to disclose property addresses and insisted on being present at any visit, we had to endure a lot of "non-starter" pitches.

> Having to fire three agents after telling them what you want means
> something's really wrong somewhere.

I won't describe it as "wrong", but it was certainly counterproductive. The Agents I dismissed all assumed that they could show me multi-story houses after I'd said "Only one level" as clearly as possible, or that condos would interest me after I'd told them "No" in plain English, or that I'd be willing to live next to a pile of chromium. They lost the sale because they didn't listen.

> I don't think the problem was that you were excessively choosy; I think
> the problem was a lack of suitable houses, so the agents showed you
> "almost good enough" houses.

They showed us whatever they had, including one home where, when we asked about local stores, the sole occupant - a high school senior who was staying there until he graduated - told us that if we wanted a Coke we could just walk over to the prison!

> You had the resources and patience to go through all that. Many folks
> don't. If you spent just 1 hour per house on research, that's over
> 2-1/2 weeks work before the actual job of buying and moving begins.

It was more like six months: my wife and I were both holding down full-time jobs, but we chose to dedicate the time and money to finding a home that *WE* wanted, instead of something that a real-estate agentdecided on.

>> Michael is right: the agent represents the *SELLER*, not the buyer.
>> He is legally obligated to disclose _some_ things, but professionally
>> obligated not to disclose anything else that might lower the house's
>> value. Agents are not your friends.
>
> I disagree; they can be. But the main point is that the agent, whether
> a buyer's agent or a seller's agent, doesn't make any money until a
> sale happens.

The main point is that an agent doesn't really care if (s)he meets your needs. (S)he gets paid to wear a buyer down until the trash heap next to the Interstate starts to look good, and that's a damned shame, but it's also capitalism in action. Real-estate agents *know* that they'll only make a sale out of some small percentage of showings, but they also know that that percentage is constant, and so they'll show you everything they can get a commission on. If it's "your" house, they win, and if it's not, they're that much closer to a sale. It's a tough business, to be sure, but some agents allow it to dull their common sense.

> I think all this is having a negative impact on amateur radio. Here's why:
>
> 1) Lots of people who live in restricted homes never pursue an interest in amateur radio because they don't want the antenna hassle. Not every restricted home has a suitable attic or yard where an antenna can be hidden. Many restrictions are such that flagpoles, birdhouses, awnings and other things are prohibited too. Plus Gladys Kravitz type neighbors who look for *any* infractions (it only takes one).
>
> The effect is particularly strong on young people, who can't just move and whose resources are usually less.

It's not the neighbors who matter: IMNSHO, home buyers don't care about CC&R's unless and until a real-estate agent convinces them that such things are important. CC&R's are put in place to protect *builders*, not buyers, because the builder is afraid that someone will erect a tower or construct an addition or drill for oil before all the lots of a development are committed, and because builders are vain enough to believe that their corporate identity is something that makes a difference to home buyers.

For their part, real-estate agents like CC&R's because they assure a consistent product that can be turned over repeatedly without the need to worry about someone's aversion to whirligigs, antennas, lawn ornaments, or pretty much anything else that a homeowner might add. CC&R's save them time and trouble, and that means more profit.

CC&R's are like an automobile purchase contract that obligates the buyer to never repaint the car, never allow it to rust, never install custom headlights, never modify the interior, and never hang fuzzy dice from the mirror. They are contracts that benefit only those who are involved in the *transfer* of property, not in its use: if CC&R's benefit homeowners by maintaining the "value" of their land, they also cheapen people's lives by lessening the value of their community and by denying their children exposure to other ways of living and looking at the world.

> 2) Lots of hams who live in restricted homes are much less active amateurs than they would be if they didn't have the hassle.
>
> 3) Certain areas become "no-hams" zones, because more and more hams steer clear of them.
>

> 4) The publicity and visibility of amateur radio decreases over time, because nobody sees antennas, and hams operating stealth don't talk about it.
>
> How many of us first discovered amateur radio, or found our first Elmer, by seeing his/her antenna(s)?
>
> For decades the trend in amateur radio has been to make the licenses easier to get, the equipment less expensive, more reliable and higher performing, and the choices of activities greater. But at the same time, there's been a slow but steady trend to make more and more homes ham-radio-unfriendly. That's not a good thing.
>
> I'm not sure how to meet the challenge head-on; we don't have the resources of the satellite-dish folks.

I'm not sure the challenge _can_ be met "head on": as I've said before, in this and other forums, Ham Radio was popular when I was young because the government took extraordinary steps to encourage scientific education in the post-Sputnik years, feeling that we had to outpace the "red menace". That translated into lots of publicity for ham radio, a good amount of "free" equipment for those who participated in MARS, and preferential treatment during frequency-allocation hearings at a time when shortwaves were the _only_ means of international broadcasting.

During most of the Cold War, hams were a trained corps of radio operators who could be pressed into service quickly if needed: that's why the NTS is patterned after military nets, and why hams had to learn Morse long after it passed from commercial use. The Cold War is over: we won, and now the military thinks we're surplus.

Of course, it's more complicated now. We can, sometimes, help out during disasters, and even though some hams headed to Haiti in the wake of the earthquake found themselves getting shot at, in most cases our assistance is welcomed. We can, sometimes, provide a source of news and information to both public outlets and individuals during such events, although American TV networks think nothing of bringing suitcase satellites into disaster areas. We can, sometimes, provide public exposure for ham radio, even if only by wearing a T-shirt with an ARES logo during field day.

Long story short: CC&R's are one symptom of a societal shift which is leading to less demand for all kinds of technical expertise, not just ham operators. American home buyers, fully aware that their futures and their horizons are being altered by international forces they can neither anticipate nor prepare for, are willing to shortchange each other and give up their right to modify their environment, in return for being able to keep anyone else from doing so. The "paradise" they are purchasing is a pale imitation of what it could be, but they'll settle for it never being less.

We must adapt or perish.

My 2¢. YMMV.

Bill, W1AC

Ah, one of the few that truly understood the reasons for
Morse Code. (And the decided lack of it now.)

"Those that would trade liberty for security deserve neither."

> We must adapt or perish.

And flaunting CC&Rs is not the answer.

Since I'm an "old law" Extra, I think I'm entitled to say that the view from the top of Morse Mountain wasn't worth the climb. I like Morse "now and then", and I have a collection of old telegraph instruments, but I agree that it's no longer practical.

However, the question now is "how do we keep ourselves on the

Pentagon's and the FCC's good side"?

>> American home buyers, fully aware that their futures and

I think the problem, in a nutshell, is that it may eventually become
the only option. There's little vacant land to be had, and that means
builders will be tearing down existing houses to make way for the next
generation's McMansions, so even "old" areas will eventually come under
CC&R restrictions.

The larger question is, as I've said before, "Do we matter anymore"?
We're certainly not going to be drafted to pound brass alongside
another soldier who is talking to the U.S. on a suitcase satellite
while he faxes the daily readiness report, and we're not needed to
maintain the broadcast industry's equipment, which is now so reliable
that stations don't have to have a licensed engineer on the payroll.
The trend, as in all walks of life, is toward the bottom of the
educational barrel, with specialist such as we being relegated to
"maybe we'll call you" limbo at the same time automated test equipment
makes our specialty obsolete.

So, what now? We've had this debate before, and I'll repeat my
position: either we get a lot better at publicizing ourselves, and a
lot better at being available in emergencies so that we have something
to brag about, or we resign ourselves to a long decline.

Bill, W1AC

> Do you have specific ideas on how this can be resisted?

One way is education: make people aware of the real long-term ramifications of CC&Rs, HOAs, etc. Particularly when they take the form of an unchangeable contract.

Such education takes time but it does make a difference in the longrun.

> American culture has changed a lot during
> the past few decades. �When
> did we start seeing the McMansions?

Good question! My guess is the late 1980s.

>�The idea of "the perfect house" is
> much different now than 30-40 years ago.

What would you say has changed? What did it used to be, and what is itnow?

> The public votes with its wallet.

But often it's not an informed vote. Look at how many people got themselves into a financial disaster by buying too much house. They didn't *plan* on that!

> �As you point out, if there was
> general displeasure with CCRs, houses
> with CCRs wouldn't sell. �I don't
> see any evidence that CCRs significantly
> reduce the sales potential of
> the property involved, and their growth

> suggests that the general public
> views them in a positive light.

I see two factors:

First, the general public often really doesn't understand what they're getting into. That's been proven time and again.

Second, in my limited experience, CC&Rs tend to *reduce* a home's price long-term. This mean a restricted house sells for less, making it seem a better deal.

But what then happens is the owners discover that, with the HOA fees, pages of rules and lack of flexibility, the place costs more overall.

> You may perhaps think my views are pessimistic;
> I prefer to consider

> work within it. �Yes, it can be difficult to work within it. �
��There are
> many things in life that are neither easy nor ideal.
>

Of course we must know the system and how to work within it. We must also educate other hams; too many don't know the difference between a township ordinance, a deed restriction and an HOA rule.

But I think there's more that can be done. Legislation is one possibility. For example, when asked about extending the OTARD ruling to include ham radio antennas, the FCC essentially responded that hams should get Congress to instruct them to do it. IOW FCC won't do it onits own.

There are anti-restrictive-CC&R groups such as one that opposes no-clotheslines rules.

And there's the media. More than one person has been allowed to have their flagpole or religious display because the media made an issue ofit.

I disagree. International broadcasting via communications satellite
began with Telstar, a decided commercial enterprise by AT&T before the
full breakup of the alleged monopoly by the Bell System. I don't think
this has any bearing on antenna restrictions on homes. Home selling is
a decided commercial enterprise.

The "40m fight" between amateurs and SWBC wasn't settled during WARC-79
and had to wait until WRC-03 to be resolved. That's a mere 24 years,
part of the time during the "Cold War."

Military commsats didn't exist until after Project Score proved it
could be done. All through the Korean War active phase (1950-1953), US
Army station ADA relayed about 9 million messages total on HFalone.

>During most of the Cold War, hams were a trained corps of radio

Amateur radio was considered "surplus" before 1960 by the US military.
I know this by being IN the US Army Signal Corps 1952-1960. As an
example, I reference the following excellent work by Walter Elkins on
Signal Corps units and locations of the US Army Europe (USAREUR) from
1945 to 1989:

http://usarmygermany.com/Units/Signal/USAREUR_SignalCorps.htm

The "Cold War" began about 1948 with the blockade of Berlin. The "Cold War WITH the USSR" ended after the First Gulf War when the Soviet Union dissolved itself. We now have another kind of "cold war" with terrorists which was highlighted by the suicide flyer-kidnappers of 11 September 2001.

As another reference there is the June 1996 history of the US Army Signal Corps called "Getting The Message Through" (unofficial motto of the Signal Corps. Free download is available from:

www.history.army.mil/books/30-17/front.htm

That is from the US Army Center for Military History.

For more on early USA radio history, including amateurs, see:

http://earlyradiohistory.us

>Long story short: CC&R's are one symptom of a societal shift which is

I just can't tie together all those separate subjects (Cold Wars, OOK CW, alleged technical ignorance with personal antennas at homes.

When did this happen? With websites such as realtor.com available

What I mean is that, in a CC&R/HOA situation, if there exists even one
neighbor who knows all the fine print and takes an interest, that
neighbor can make all sorts of problems for you over even
minorviolations.

> CC&R's are put in place to protect *builders*,

All true, and more. I've read that builders can sometimes get better deals from lenders by inserting CC&Rs, and that anti-antenna CC&Rs came from deals with cable-TV companies.

> For their part, real-estate agents like CC&R's because they assure a

> to worry about someone's aversion to whirligigs, antennas, lawn
> ornaments, or pretty much anything else that a homeowner might add.
> CC&R's save them time and trouble, and that means more profit.

I have found that at least some agents don't pay any attention to CC&Rs unless the buyer makes a big deal about them.

> CC&R's are like an automobile purchase contract that obligates the
> buyer to never repaint the car, never allow it to rust, never install
> custom headlights, never modify the interior, and never hang fuzzy dice

I've said something very similar in the past. I included always having to bring the car back to a dealer for service.

> They are contracts that benefit only those who are
> involved in the *transfer* of property, not in its use: if CC&R's
> benefit homeowners by maintaining the "value" of their land, they also

> the world.

WELL SAID!

Not only that, but they can inhibit the development of real "community values" by installing artificial ones.

For example, in my neighborhood, the homes were built soon after WW2 and were all practically identical small frame houses. They were almost the classic little-boxes except that they were all paintedwhite.

Then somebody got the idea to add a front porch. To 1950s architects, front porches were "old-fashioned" and "not in keeping with the modern lifestyle". But someone put one on anyway, and liked it. Pretty soon other folks did the same. Some folks did wrap-around porches that required variances, and the neighbors came out in support of the variances - even those who had no porches. Other additions and variations followed until now no two houses are identical or even that much alike. And property values are quite good.

Had there been the kind of CC&Rs that are common today, none of that would have happened.
>

> > For decades the trend in amateur radio has been to make the licenses easier to get, the equipment less expensive, more reliable and higher performing, and the choices of activities greater. But at the same time, there's been a slow but steady trend to make more and more homes ham-radio-unfriendly. That's not a good thing.
>
> > I'm not sure how to meet the challenge head-on; we don't have the resources of the satellite-dish folks.
>
> I'm not sure the challenge _can_ be met "head on": as I've said before, in this and other forums, Ham Radio was popular when I was young because the government took extraordinary steps to encourage scientific education in the post-Sputnik years, feeling that we had to outpace the "red menace". That translated into lots of publicity for ham radio, a good amount of "free" equipment for those who participated in MARS, and preferential treatment during frequency-allocation hearings at a time when shortwaves were the _only_ means of international broadcasting.

Sputnik went up in October 1957, and I agree that it had an effect.

But the popularity of ham radio in the USA was increasing long before Sputnik. For example, in the 1930s, the number of US hams almost tripled, from less than 20,000 in 1929 to over 46,000 by 1936. After WW2, the growth continued, and really took off after the Novice license was created in 1951.

OTOH, from 1960 to 1970, the number of US hams grew very slowly, and actually declined in some years.

> During most of the Cold War, hams were a trained corps of radio operators who could be pressed into service quickly if needed: that's why the NTS is patterned after military nets, and why hams had to learn Morse long after it passed from commercial use. The Cold War is over: we won, and now the military thinks we're surplus.

NTS dates from before the Cold War, and the idea of a trained corps of radio operators was proven to be valid in both World Wars.

As for Morse passing from commercial use, that didn't happen until the 1990s. The real reasons the Morse Code tests continued until a few years ago are more complex.

First, there was the international treaty. Until 2003, it required Morse Code tests for all amateur licenses granting privileges below a certain frequency. In 1947 that frequency was 1000 MHz, and over the next couple of decades it was lowered to 30 MHz in a couple of steps. But until 2003 the FCC's hands were tied because of the treaty.

Second, there was the amateur community's opposition. In 1975 the FCC proposed a VHF/UHF only nocodetest amateur license, and the reaction in the comments was an overwhelming "NO!". In 1983 FCC tried again, and again the reaction was "NO!". In 1991 the FCC did it anyway.

> Of course, it's more complicated now. We can, sometimes, help out

> although American TV networks think nothing of bringing suitcase
> satellites into disaster areas. We can, sometimes, provide public
> exposure for ham radio, even if only by wearing a T-shirt with an ARES
> logo during field day.

All of which are good things.

We can also promote the idea of "radio for its own sake". Many people do things just for fun, even if they aren't "easy" or "modern". Ask any backpacker or marathoner.

> Long story short: CC&R's are one symptom of a societal shift which is

> settle for it never being less.

I think it's a lot simpler: Many people don't think about them that much, or even know they exist in many cases.

> We must adapt or perish.
>

Agreed!

But we must not lose the core values either.

Or sailor. I think that this is the future of amateur radio. There aren't huge numbers of backpackers, marathoners, or sailors, but there are enough to fuel the interest in the avocation. This is where ham radio is headed. I don't know how many hams it will take to maintain the critical mass, and I hope that we don't fall below that number as the exit rate from the hobby eclipses the entry rate into it.

> I think it's a lot simpler: Many people don't think about them [CCRs] that
> much, or even know they exist in many cases.

I agree. Over-analysis of the issue sheds little light on how to fight the fact that CCRs exist. For the majority of the population, they're simply not an issue and we're unlikely to raise awareness enough to change that. Even if we did, most folks' reaction would be that CCRs are a wonderful thing because they see only the benefits and not the more subtle side effects.

```

Discussion of US Amateur Radio license requirements elsewhere got me thinking that a discussion of the whole subject might be interesting. For me, the place to start is the historical beginnings.

The following is my take on events with respect to US Amateur Radio.

Before 1912, there was very little regulation of radio by the US government. The whole technology was so new and revolutionary that it took a while for the need of regulation to become apparent. Various bills were introuced before Congress but not much changed until the Titanic disaster showed the need for better regulation in several areas. Since the main commercial use of radio at the time was for maritime communications, the effects of that tragedy were widespread.

After 1912, the Federal government took a very active role in the regulation of radio. Their solution was licensing of both operators and of stations, regulations establishing different radio services and enforcing technical/operating standards, and the issuance of callsigns to positively identify transmitting starions. Those in charge knew, understood and supported the concept of the skilled, knowledgeable, licensed Radio Operator in all radio services.

In some services the required skills and knowledge would be mostly technical, in others they would be mostly operational, and in most a mixture of operational and technical, but in all cases the licensed Radio Operator was indispensable.

Thus there were Amateur licenses, Commercial Radiotelephone licenses and Commercial Radiotelegraph licenses. There were station licenses and operator licenses. There were several operator license classes, serious test requirements. As technology developed, and a whole flock of endorsements for things like radar were created.

Some of this did not come easily. During the 1920s there was a considerable amount of debate over which government level and agency should regulate radio, and how new technologies such as broadcasting, which was unknown in 1912, should be handled. There was also the evolution of world radio treaties to set up standards betweennations.

Through all this the concept of Amateur Radio evolved, in large part due to the efforts of those such as H.P. Maxim, Charles Stewart, K.B. Warner and many others, They faced considerable opposition, because there were many who would have liked Radio to be a strictly commercial or government technology.

For example, the 1912 regulations limited amateurs to 1000 watts input and waves no longer than 200 meters, and required licensing of all transmitting stations and all operators. Many simply left the air because they felt the new rules were too restrictive, but others pressed on to see what could be done.

One may wonder why the regulations didn't just outlaw amateur radio entirely. I think there were three reasons:

First were the efforts of Maxim and the others, testifying before Congress and committees as to the need for Amateur Radio.

Second was the general feeling during the Progressive Era that the average person should have at least some access to radio transmitting.

Third was the widely-held idea that the low power of 1 kW and the short waves below 200 meters were essentially useless for commercial purposes, so why not banish the amateurs to them?

A similar situation developed after WW1 ended, and again it took a considerable effort to get amateurs back on the air. One added factor in 1919 was that thousands of amateurs had proved the worth of their self-training in radio during the war.

Efforts to secure the place of Amateur Radio in the regulations continued through the 1920s, culminating with the 1927 treaty regulations that recognized Amateur Radio as a separate and distinct radio service, with its own bands and rules guaranteed by treaty as well as national laws.

Licensing of all radio transmitters and operators had some far-reaching effects. For example, licensing of commercial operators created not only a lot of jobs but a whole profession. Every radio service needed licensed Radio Operators of various levels for various tasks. Whether it was routine transmitter checks at a daytime-only AM

BC station, running a vital maritime shore station, or any of dozens of other jobs, the licensed Radio Operator was an absolute necessity, by law. And these became pretty good jobs, with decent pay andbenefits.

Someone could have a Ph.D. in EE, the Nobel Prize in physics, years of military radio experience, etc., etc., but without the proper License they were not a Radio Operator and could not legally do any of the Radio Operator's jobs.

Amateur Radio was often the first step in the licensing process of commercial operators, though not all commercial operators started outas hams.

The end result was that for several decades a commercial license of the right type, plus a high-school-equivalent education and a clean record, were practically a Golden Ticket to a decent-paying career.

This doesn't mean all the jobs or the licenses were easy to do or get, nor that a Radio Operator didn't have to know his/her stuff. Just that it was a way for folks who knew something about Radio to get a decent living without a college degree and without low-priced competition, both domestic and "offshore".

At the same time, none of the licenses, commercial or amateur, required anything close to the knowledge of an four-year EE degree. Nor were they meant to.

Even the military followed suit. For example the US Navy had various classes of Radioman, each requiring a considerable amount of training, experience, and proof of skills and knowledge.

Another result of all this licensing was that the government didn't really have to do all that much enforcement. Licensing produced a culture where respect for and compliance with the regulations was taken very seriously, and nobody, commercial or amateur, wanted to risk the loss of an operator or station license. They were too hard to get in the first place, and even more difficult to replace if revoked.

It was a pretty good system - maybe too good.

The problem was that the Captains of Industry didn't like paying for all those licensed Radio Operators, nor their benefits, for what seemed to them to be simple, easy jobs. Unionized or not, the License requirements meant the Captains couldn't hire just anybody for the jobs, nor could they combine certain jobs to reduce the head count, nor could they neglect doing certain things to reduce expenses. Nor could they export the work.

So the Captains of Industry got the regulators, and the regulations,changed.

Over a number of years they succeeded in all but eliminating the concept of the skilled, knowledgeable, *licensed* Radio Operator. Saved lots of money and aggravation. All we have left now are pieces of the old rules and requirements.

Some might say that the new technologies no longer required specialized Radio Operators, and in some cases that's probably true. But I think the dismantling of commercial Radio Operator licensing was more about the deregulation for the sake of bigger profits rather than the lack of need for operators.

And since they did it for commercial services, the same concepts were applied to the Amateur Radio Service. But the Amateur Radio Service is still all about the technically knowledgeable, operationally skilled Radio Operator.

Or at least I think it should be.

73 de Jim, N2EY

Any game difference is due to the lack of sales, due to a depressed
market.

I had the same experience here. At the time we bought, the market was
in a lull between full sped ahead, but it was still better than now.
The real estate agents were very aggressive, and you were bomabarded
with houses that were either not applicable or overpriced. The three I
went through all had the same tactic. They find out how much the
maximum is that the bank will lend you, and then the least expensive
house they show you is at the very top, but most will be significantly
over. Then what you are supposed to do is to figure out how to finagle
that extra amount, usually by taking out another back door loan. One
of them actually called me stupid because I refused to pay more than
66 percent of the maximum amount the bank would loan. They had a
system, and I wasn't playing the right way.

<some snippage>

> All true, and more. I've read that builders can sometimes get better

You hit the nail square on the head there, Jim. When these things
started, I doubt that anyone had the idea of discriminating against
Hams. We were just collateral damage in the same way that we get
inadvertently get involved in anti-cell phone while driving
legislation.

>
> I have found that at least some agents don't pay any attention to CC&Rs
> unless the buyer makes a big deal about them.

Right, and in most cases people who are interested are interested in
more restrictions rather than less. There is a type in this world who
is upset by anything out of place, by their view of the back yard
being marred by the neighbors clothes drying on the line, or even the

style of their house once upon a time, they would be consigned to the eccentric grouch down the road, yelling at the neighborhood kids to get off their lawn, but now they live in neighborhoods where they rule.

<some more snippage>

> We can also promote the idea of "radio for its own sake". Many people

Again, there is something that is very important, and seems to get ignored by so many.

I really enjoy being involved with just about all aspects of Amateur radio, but too many people tend to think that their own interested are the ARS's main focus. Contesting, Emergency work, favorite modes. It's all good.

But my main personal interest is radio for it's own sake. I build as much as I can, and enjoy making those little pieces of electronic "stuff" do things for me. 8^) The radios themselves have progressed beyond what is practical for me to build mostly - though practicality hasn't stopped me yet, but peripheral construction, system building, and the odd retro project now and then. Yeah, that's cooking with gas!

Oy! That is *exactly* the reason why I will not live in a neighborhood like that. I just have to imagine that the stress put on a family by having an unusual neighbor like that, has to be much more than any stress from researching, finding and living in a neighborhood where they don't have intrusive restrictions that neighbors can sue you for.

What is amazing to me is that the unusual neighbor is engaging in stalking behavior, which apparently puts him on the "right side" in this development. So completely backwards. What's more, the guy is winning, the family he is stalking and harassing and suing is moving away.

In my presumably less proper neighborhood, the police would be visiting the fellow, and educating him on the wisdom of not stalking people.

It's all a balancing act. My HF dipole, VHF/UHF Jpole, and HF6V are put up as unobtrusively as possible. I've not tried to hide any of them either though, which harkens back to Jeff's original post here. I've spoken with the neighbors and explained about Ham radio. I do admit that I've emphasized the emergency aspect, which is just a whole lot easier to explain to folks, and mentioned that if they get interference to let me know. They've all been cool with it, though they like to come out and chuckle at the gyrations when I replace an antenna.

Side note that was part of a learning process for me: Years ago, we lived in a townhouse for a couple years. The neighbor lady was a real pain. Anything she could do to make trouble, she did. This included calling the fire company during a cookout. Double Oy! Finally, in an effort to calm things down, we asked her over to share a meal. Problem solved! While I'll not say she wasn't unusual, all she really wanted was for the neighbors to have some sort of socialization with her. Turns out she is an accomplished children's book writer, and has a wicked sense of humor.

I guess the moral of the story as far as I'm concerned is do your research, know your neighbors, and communicate with them about your Hamness. Some times people call me lucky in all this. I think we make our luck.

With all due respect . . . all neighborhoods are like that.

Yes, there certainly are developments that pride themselves on the enforcement of their rules, with people out there measuring the height of your daffodils to be sure they're within the specifications that the homeowners association has established.

But I've seen petty neighbor squabbles out in the country. It has a lot more to do with personality clashes between individuals than it does with CCRs. CCRs may make it easier, and they may be a marker that it's more likely, but it can happen anywhere.

You're right. But luck is there, all the same. You could have an unreasonable neighbor who didn't respond to your doing all the right things. If that happened, you would be in a world of hurt with very little recourse.

Why do you think so many horror movies have the word "Neighbor" in
thetitle?

Bill, W1AC

Ham radio relevance: I had a knock down, drag out boundary fight with
*my* neighbor after I hired a surveyor to stake my land for a tower. It
turned out that my "neighbor" had his fence 16 feet onto my land.

Trust me: *NEVER* buy the title insurance the bank demands. Get your
ownpolicy!

No problem guys, let's just say that I am incredibly lucky.

Then again, some of us may have some part in manufacturing our own luck.Can I say for sure that I'll never have neighbors that accept my Ham radio avocation? Not 100 percent. On the one side of our house is a high-end rental. But we're friends with the landlord, and she makes sure the prospective renters know I'm a Ham. But catch this, if there's a big problem, the renters will go. That probably sounds strange, but it's a networking issue. The XYL was involved in the landlord getting and remodeling the place, and we watch over it for her.

BTW, I had my lot surveyed before buying and I hired a lawyer to do my
own title search - although I still had to buy the insurance -no
choice. The insurance cleared, and the lawyer found some problems.
Saved me about 5K for a couple hundred paid to him.

This part of the history touches upon a issue that I think fits under the "law of unintended consequenses."

I came into Amateur radio as a digital guy who wanted to learn about radio This may give me a different perspective.. A lot of Hams, especially those who have been Hams for a long time, seem to inadvertently downplay just what knowledge is needed to be an effective communicator in wireless. You see this in their comments about some supposed ease in getting a license, among others. I'm here to tell you that the art and science of making a communications link between randomly "chosen" areas, and all the electronics that that entails, is a matter that takes some serious education and/or experience.

Yet time after time, the systems that we come up with just fail. And the problem is always that the best laid plans to take the skilled operator out of the link fail. The reason is pretty simple. The effort to remove the decisions that an educated operator would make add infrastructure to the system. When the wheels com off, the infrastructure fails. The same forces that destroy, flood, and freeze the victims of disaster also have an effect on the infrastructure that is in place to rescue them.

On the commercial radio operator demise part, I'd have to say that you want to listen in my area to hear the results. One company owns all the radio stations in my area, with the exception of the Public station.. The only one I bother to listen to other than the Public station is the local ESPN sports station. They regularly go off the air for long periods of time, play the satellite feed message, or my favorite, play two feeds at once. The funny thing is that the most listened to station in the area is guess who, the public station. They still have engineers, they still monitor their output, and they actually take input from their listeners.

That deregulation, that getting rid of skilled employees, did it work when we have 8 or 9 stations that are horribly undependable, and most everyone, even people who hate to admit it, listen to the public radio station?

- 73 de Mike N3LI -

I don't think so. I've lived in several neighborhoods that weren't and
aren't like that at all.

Agreed - it most certainly can, and does, happen in places
withoutCC&Rs.

The thing about CC&Rs is that, IMHO, they make such things more
likelyand easier.

Depends on the situation. Yes, a bad neighbor can make life miserable
in almost any situation. But CC&Rs can make it easier for the bad
neighbor to do it, and do it *legally*.

I think it's very important for hams to be good neighbors, with or
without CCRs, HOAs, etc. I think part of that is being knowledgeable
about some of the issues.

I've known hams (and others) who loudly expressed the idea that it was
THEIR property and they could whatever they wanted with it. These folks
expressed disdain for building codes, zoning ordinances, etc. Problem
is, even a non-attorney like me knows that it doesn't work that way.

For example, if a neighbor violates building safety codes in such a way as to create a fire hazard, my property is at risk, and I have a legitimate interest in getting the codes enforced. Same for things like flooding. When an amateur disregards such concepts, it makes us look bad.

Which goes back to what I said originally:
> Do we all have to act like having an FCC grant (license)
> somehow makes us above the law?

Back when I was living in Culver City, I'd put a pair of push up masts at opposite ends of the house to string a multi-band dipole between. About 5' above the crest line of the house. Just the poles, I hadn't put the dipole up yet.

My neighbor's wife called in tears, "I can see that pole from every window of my house."

Later that evening her husband called and threatened me with all sorts of law suits etc. etc. I suggested that if his view was ruined he should consider moving to an area

with CC&Rs. Of course, the down side would be their new
neighbors would have their yappy dogs put to sleep.

I didn't hear another word out of him for 6 months.

Although he did show his displeasure by refusing to trim
the ivy on his fence for a whole year. Until the city made
him cut it back.

I don't think that's just a long-time-ham thing.

> You see this in their comments
> about some supposed ease in getting a license, among others.

I think there's a big difference between what it takes to get a USA amateur license and what it takes to be an effective communicator, even if we're just talking about Amateur Radio. The license tests are just the beginning; there's a lot of practical stuff not on the license tests.

> I'm here
> to tell you that the art and science of making
> a communications link

> between randomly "chosen" areas, and all the electronics that that
> entails, is a matter that takes some serious education and/or
> experience.

I think that depends on what resources are available and what the actual conditions and communications needs are.

For example, with modern satellite communications, a news team can be flown into a disaster area (such as Haiti) and get an on-the-spot report out of the disaster area in short order. Getting communication from specific people in the disaster area to others inside or outside the disaster area is a completely different thing.

Some folks may not consider "health and welfare" messages to be of vital importance, but when you have loved ones in the disaster area and haven't heard from them in days, a simple "We're OK!" message ispriceless.

Plus what is seen on TV isn't always an accurate picture. On another forum I read about the devastation of Hurricane Ike being only just behind Hurricane Katrina in dollars. But Katrina got far more media play than Ike, over a much longer time. And the Katrina coverage focused on New Orleans even though the Mississippi coastline was harder hit. (This isn't a claim of bias or wrongdoing; reporters can't be evenly distributed everywhere. But it is reason to take TV reports with a grain of salt).

> Yet time after time, the systems that we come up with just fail. And

> that is in place to rescue them.

As Commander Montgomery Scott used to say: "The more complicated you make the plumbing, the easier it is to stop up the drain". Or similar.

The problem is cost; the skilled operator costs more resources than the equipment that replaces him/her. And as the availability (in the technical sense) of the equipment improves, the apparent need for operators goes down.

> On the commercial radio operator demise part, I'd have
> to say that you

> station..

To diverge for a moment, that's another example of the government taking a hands-off approach when formerly they had been active in regulation.

It used to be that there were all kinds of limits on how many broadcast stations the same corporate entity could own in a given market. The idea was that no market should be dominated, let alone monopolized, by a single network or company. This idea and the regulations to enforce it were in place for decades, but a few years ago were quietly tossed aside, resulting in what you have in your area.

> The only one I bother to listen to other than the Public

AM or FM?

> The funny thing is that the most
> listened to station in the area is guess who, the public station.

Not unusual - market forces at work... Here in Philly we have at least two: WHYY and WXPN

> They
> still have engineers, they still monitor their output, and they
> actually take input from their listeners.

> That deregulation, that getting rid of skilled employees, did it work
> when we have 8 or 9 stations that are horribly undependable,
> and most
> everyone, even people who hate to admit it, listen to the public
> radio station?

Depends on how you define "did it work". From a pure profit standpoint, all that matters is the return on investment. To the station's owners, the additional cost of improving the availability of the signal and the content of the programming may not result in enough of an increased return (of cash).

But the public station measures "return on investment" differently.

I think Amateur Radio does, too.

And my point was that *some* hams think that way. Not all. And it's not about the license grant.

What I think is the really bad part is that such comments display an ignorance of the law which weakens their case. Yes, state and local governments cannot regulate radio the way FCC does. No, that does not mean an amateur has carte blanche when it comes to antennas.

How?

I mean, unless her house only had windows on the side facing your house, she was clearly incorrect.

Well, I must be lucky, because around here the neighbors ask if theycan help. Shovel each others walks and driveways when it snows, mow each other'slawns when on vacation. Many of the homes share driveways; one pair of families I know put basketball hoops on both sides so the kids can play full court.

Some houses have TV antennas, ranging from relics of the 1950s to those little dishes. I have a mast and 80/40/20 inverted V with the center at 40 feet. Some people garden extensively, some play music, some are constantly upgrading their properties, somehang out on their front porches whenever weather permits. Nobody gets upset aboutany of it.

On Halloween I can count on at least 100 kids showing up for trick or treat. Then there are the Christmas displays..

Two summers ago the neighbor across the street had a tie-dye party on the front lawn. It was a blast.

You can't force that sort of stuff by regulation. We lend each other tools and give away surplus materials. (Neighbor'scomputer monitor failed, I went up to the attic and gave him one of myspares...)

CC&Rs? What are they?

73 de Jim, N2EY

To me, that is a confusing paragraph. As far as I've seen in more urban areas, the "infrastructure" survives quite well and has been proven to do so in some very serious events. That takes planning by "skilled, knowledgeable" managers. I'm talking about the telephone infrastructure, the public safety infrastructure, and even the broadcast infrastructure. If an emergency is totally catastrophic to eliminate some "infrastructure," it will also eliminate the amateur as a potential savior.

I've seen, over TV, some rather catastrophic emergencies, brought to everyone by the news media of several networks, including showing in the background the communications vehicles and equipment of various National Guard units (source: flooding of rivers beginning in the Dakotas). Add to that the First Gulf War bombing in Iraq done by a CNN news team, none identified as amateur licensees.

There has been a significant improvement in 'radio' technology that does not require the old-style "skill and knowledge" alluded to by the first thread author. For example, during that First Gulf War bombing, voices of the journalists were coming over the Iraqi telephone infrastructure. When that was damaged during the bombing they continued on via satellite using equipment they had with them. Saddam Hussein was even interviewed live by one of the CNN journalists during that bombing.

By the way, the first thread author's text may be viewed almost verbatim on e-ham.net Forums, Licensing, under "A Modest Proposal" dated 31 January 2010. My reply to him follows there but there was no counterpoint to my reply. <shrug>

Its a matter of system complexity. The more complex the structure, the
more likely the failure.

In our area, we have a 10 year old system that doesn't work under
normal conditions, much less emergency ones They are trying to replace
it now, but we spent a whole lot of money and got very little for it.
It was touted as a great thing when it was installed. And it wasn't
inexpensive or put together

> I've seen, over TV, some rather catastrophic emergencies, brought to

Most very respectfully Len, I now understand the confusion.

The amateurs are not there to provide news via satellite, or to do television shows. We're not part of public safety or broadcast stations.

We're there to pass along communications behind the scene.

Where this shows up is in the how of our work. It isn't glamorous, to be sure. But in most cases, a satellite reporter from some disaster scene is going to be there to give a news report. Not so likely a request for say, shovels and toilet paper. It's all part of post disaster work.

Broadcast stations are in a similar state. Their part is more likely to give people info about avoiding the areas in question, or evacuation routes to follow. Amateurs wouldn't be doing that, because there isn't a receiving end. Most everyone has a Television and a AM/FM radio. Not so many have a 2 meter radio.

So the typical placement might be as such:

Some place has an emergency, let's say a modern day version of the New Madrid earthquake.

We'll likely be looking at some different teams heading into the area. There will be lots of first responders, like National guard, firefighters, Medical personnel, and the like. There will probably be some Hams also. News teams will be there.

Each group will be doing it's thing. The Hams will likely be passing along messages for the sort of thing I mentioned above, another part will be getting messages to the outside world about "We're still around". It's possible that the cell system functioned perfectly in your area, but typically the post disaster scenario has been one in which everyone is calling to see if their relatives are doing okay. If the cell towers still have electricity, they get clogged quickly, if they don't, their backup systems go down after a while. While we may communicate via cell if it is working, I don't know of anyone who has cell phones in their disaster comm plans.

So anyhow, I think you might be mistaking other groups issues, like the broadcasting and newscasting industries with the job of setting up radio stations and passing along messages for health and welfare. Hams aren't usually on the front lines, they're just performing a part in the process.

And yes, a large part of why they are doing it is both that the infrastructure that might be used otherwise fails, and that while it might look effortless, there is knowledge that ends up being a big help in getting the message through that has been lost by the idea that the communicator only need to know how to talk, and that technology can fill in for the missing knowledge.

==> PUBLIC SERVICE : ILLINOIS TEAMS WITH AMATEUR RADIO OPERATORS TO CREATE RACES PROGRAM

A newly forged partnership between Amateur Radio operators throughout the state of Illinois and the Illinois Emergency Management Agency (IEMA) will provide an additional layer of emergency communications during disasters. The agreement creates the State Radio Amateur Civil Emergency Services (RACES) program. Under the agreement, IEMA Director Andrew Velasquez appointed ARRL Illinois Section Emergency Coordinator Brad Pioveson, W9FX, of Benton as the volunteer State RACES Officer. Pioveson will serve as the single point of contact between IEMA and the Illinois Amateur Radio community. Read more here <http://www.arrl.org/news/stories/2010/02/02/11321/?nc=1>.

==> PUBLIC SERVICE: MARS UNIFIES OPERATION IN SUPPORT OF HAITI RELIEF EFFORT

To assist the MARS communications support effort in Haiti, the heads of the Army, Air Force, and Navy-Marine Corps MARS programs have agreed to divvy up responsibilities among the three Service MARS programs. According to Air Force MARS Public Information Officer David Trachtenberg, N4WWL/AFA3TR, this delegation of responsibility will facilitate more efficient utilization of MARS communications assets in the overall relief operation. On January 12, a 7.0 earthquake struck Haiti, killing thousands and wiped out the island nation's communication infrastructure. Read more here <http://www.arrl.org/news/stories/2010/02/03/11326/?nc=1>.

==> ARRL FIELD DAY : 2010 FIELD DAY PACKETS NOW AVAILABLE

It's that time of year again -- time to start gearing up for ARRL Field Day, June 26-27, 2010! ARRL's flagship operating event -- always held the fourth full weekend in June -- brings together new and experienced hams for 24 hours of operating fun. Field Day packets are now available for download <http://www.arrl.org/contests/forms/fd-2010-packet.pdf> and include the complete rules (including changes for 2010), as well as other reference items such as forms, ARRL Section abbreviation list, entry submission instructions, a Frequently Asked Questions section, guidelines for getting bonus points, instructions for GOTA stations, a kit to publicize your event with the local press and more.

==> COMING UP IN QST : LOOK FOR THE MARCH ISSUE OF QST TO ARRIVE SOON!

The March issue of QST -- our annual antenna issue -- is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting to a plethora of antennas and antenna projects, the upcoming issue of QST has something for just about everyone. You'll find an abundance of technical and general interest articles -- including a new operating event for newly licensed hams -- as well as monthly columns such as Happenings, How's DX, Hamspeak, Vintage Radio and more. Click here <http://www.arrl.org/news/stories/2010/02/02/11324/?nc=1> to discover what's in store for you in the March issue of QST, the official journal of the ARRL .

==> LICENSING NEWS: NCVEC RELEASES REVISED TECHNICIAN QUESTION POOL

In January, the Question Pool Committee (QPC <http://www.ncvec.org/page.php?id=333>) of the National Conference of Volunteer Examiner Coordinators (NCVEC <http://www.ncvec.org/>) released <http://www.arrl.org/?artid=9368> the 2010 Technician (Element 2) Question Pool. Upon further review of the pool, members of the QPC found and corrected more than 50 minor typographical errors and clarified the questions and answers, making them easier to understand. These adopted changes are now incorporated in a revised question pool. Read more here <http://www.arrl.org/?artid=9415>.

==> ARRL IN ACTION : WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, including planning for the League's future at the 2010 Annual Meeting of the ARRL Board of Directors, preparing for WRC-12, investigating interference, providing equipment for communications support in Haiti through the ARRL's Ham Aid program and more. This installment covers the month of January. Read more here <http://www.arrl.org/news/features/2010/02/01/11320/?nc=1>.

==> ARRL RECOGNIZES: FORMER ARRL PRESIDENT NAMED QCWA PRESIDENT EMERITUS

Harry Dannals, W2HD -- who led the ARRL as President from 1972-1982 and was named ARRL President Emeritus in 1984 <http://www.arrl.org/honoraries.html> -- has been named President Emeritus of the Quarter Century Wireless Association (QCWA <http://www.qcwa.org/>). Dannals also served as President of QCWA from 1989-1994; he is the only person to ever serve as President to both organizations. In addition to his work with the QCWA and ARRL, Dannals is a Fellow in the Radio Club of America (RCA <http://www.radioclubofamerica.org/>), a member of the Society of Wireless Pioneers (SOWP <http://www.sowp.org/>), the Old Old Timers Club (OOTC <http://www.ootc.us/>) and the Veteran Wireless Operators Association (VWOA <http://www.vwoa.org/>). In 2002, he was inducted into the CQ Magazine Amateur Radio Hall of Fame <http://www.arrl.org/news/stories/2002/05/31/102/>. "I was pleased to learn that the QCWA's leadership has conferred upon Harry Dannals this very well-deserved accolade," said ARRL President Kay Craigie, N3KN. "As the only person to have served as President of the ARRL and the QCWA, he is unique among amateurs."

==> FCC NEWS : FCC NOTES AMATEUR RADIO RESPONSE TO HAITIAN EARTHQUAKE

In a posting on January 28 to the FCC's blog <http://reboot.fcc.gov/blog/>, Mindel DeLaTorre -- the Commission's International Bureau Chief -- noted how Amateur Radio operators are assisting with communications support in earthquake ravaged Haiti. "The amateur radio community is also contributing to the relief efforts," she wrote. "In the aftermath of the earthquake, the amateur radio community in Haiti, the Dominican Republic and elsewhere has dedicated equipment and spectrum resources to the relief efforts." DeLaTorre reiterated that those who want to assist in the relief effort must go through the proper channels <http://www.arrl.org/?artid=9397>: "For anyone wanting to help, to protect against harmful interference, it is important to go through the Haitian government before any radio equipment or spectrum resources are used in Haiti."

==> ARRL RECOGNIZES: PHIL SALAS, AD5X, WINS JANUARY QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for January is Phil Salas, AD5X, for his article "160 and 80 Meter Matching Network for Your 43 Foot Vertical -- Part 2." Congratulations Phil! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the February issue by Sunday, February 28. <http://www.arrl.org/members-only/QSTvote.html>

==> SOLAR UPDATE

Tad "Sun and moon but set to rise <http://www.robertburns.org/works/483.shtml>" Cook, K7RA, reports: As soon as sunspot 1041 went over the horizon at the end of January, sunspot 1043 emerged, high in our Sun's northern hemisphere. The average daily sunspot number this week fell more than 13 points to 14.6; the average daily solar flux declined nearly 7 points to 75. Geomagnetic activity was up, and the average daily planetary A index rose 2 points to 5.1. The average daily sunspot number for January was 21.3, and the 3-month trailing average -- centered on December -- was approximately 15.2. Like last month, the average for the month greater than the 3-month average centered on the previous month is a good trend. The difference between the monthly average sunspot number and the trailing 3-month average has been positive since September. The difference for November, December and January was 0.6, 5.5 and 6.2. For 2009, the 3-month average centered on January through December (resolved to two digits beyond the decimal point) was 2.19, 2.02, 1.49, 2.01, 4.23, 5.2, 4, 4, 4.64, 7.1, 10.16 and 15.15. The predicted planetary A index for February 4-9 is 5, 5, 8, 10, 10 and 5. The predicted solar flux for those same days is 78, 80, 82, 85, 88 and 90. Look for more information in the Solar Update -- including news on 6 meter openings, and a piece from Carl Luetzelschwab, K9LA, about an auroral oval image -- on the ARRL Web site on Friday, February 5. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Robert Burns' Inconsistency in Love <http://www.robertburns.org/works/483.shtml>.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=K9Zev5gr9is> This week, there is a running of the NCCC Sprint Ladder on February 5. Look for the FYBO Winter QRP Sprint, the Minnesota QSO Party and the AGCW Straight Key Party on February 6. The Vermont QSO Party, the YL-ISSB QSO Party (CW), the 10-10 International Winter Contest (SSB), the British Columbia QSO Party, the Delaware QSO Party and the Mexico RTTY International Contest are February 6-7. On February 7, check out the North American Sprint (CW) and the ARCI Fireside SSB Sprint. The New Mexico QSO Party is February 8. The ARRL School Club Roundup <http://www.arrl.org/SCR/> is February 8-12. The NAQCC Straight Key/Bug Sprint is February 10 and the CWops Mini-CWT Test is February 10-11. Next week, the NCCC Sprint Ladder is February 12. The YLRL YL-OM Contest is February 12-14 and the FISTS Winter Sprint is February 13. On February 13-14, be sure to check out the CQWW RTTY WPX Contest, the KCJ Topband Contest, the Louisiana QSO Party and the OMISS QSO Party. The North American Sprint (SSB) and the SKCC Weekend Sprint are both February 14. The Classic Exchange (Phone) is February 15 and the AGCW Semi-Automatic Key Evening is February 17. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, February 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, March 5, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course;

Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

I think you've come to the nub of the problem: I resent the notion that
the Federal government would apply Force Majeure to override CC&R
clauses forbidding TV antennas, but leave restrictions in place for
Amateur Radio skyhooks.

To be sure, there's a value judgement involved: the FCC had to decide
that the "value" of television outweighs that of preventing individuals
from having to suffer something they consider to be an eyesore. I, on
the other hand, think that my antennas deserve as much consideration as
a satellite dish, no matter what the content they help to convey.

Bill, W1AC

>From what I can gather, the post-regulation version of radio stations is that you apply the notion of mass production to the issue. In this method, you buy up as many stations as possible, and minimally staff them. Then instead of locally produced content, you have satellite feeds. Advertisement then is mostly national type stuff - I think that's picked up from satellite also. I've heard Canadian public service announcements on our local stations. On our local sports station, there is maybe 15 percent local advertisements, and 1 semi locally produced show.

It's been an unexpected boon for the public station. These local places still need to advertise, so they are throwing money at the public station. Then they get a mention, a thanks, and it turns out that the public radio listeners will support these businesses and let them know why. The great irony is that when the NPR was largely removed from the public dole, it was done with the intention that it would kill public radio. Now after all these years, commercial radio is in the pits, and people are supporting public radio directly.

Back on topic, I'm firmly convinced that Amateur radio will serve as a sort of an island for technically inclined people, while we sort our way through this time of celebrity as role model, and the reality tv mode that so many people seem to be in thrall to. We now celebrate the mundane. I'm more interested in the exceptional, and I try to show as many people as I know that to be technical is not a bad thing. That's why I let everyone know that the hockey playing, loud motorcycle driving guy is also full of that geeky goodness. There is an alternative.

[snip]

> On the commercial radio operator demise part, I'd have to say that you want to listen in my area to hear the results. One company owns all the radio stations in my area, with the exception of the Public station.. The only one I bother to listen to other than the Public station is the local ESPN sports station. They regularly go off the air for long periods of time, play the satellite feed message, or my favorite, play two feeds at once. The funny thing is that the most listened to station in the area is guess who, the public station. They still have engineers, they still monitor their output, and they actually take input from their listeners.
>
> That deregulation, that getting rid of skilled employees, did it work when we have 8 or 9 stations that are horribly undependable, and most everyone, even people who hate to admit it, listen to the public radio station?

Ah, but you _CAN_ hear all the "undependable" stations, right? Are they still able to play whatever they choose, free from interference caused by other stations?

By brother, W3TDH, is fond of saying that "The government's job is to protect you from your neighbor's folly, not your own." So long as each station is within it's assigned channel and producing acceptable signals, the rest is a commercial matter that the public will decide indue course.

This _IS_ related to Amateur Radio: if my neighbor complains of RFI, and I'm sure that my station isn't at fault, I get to tell him to buy better equipment. I'd always do what I could to eliminate the problem first, by recommending filters, etc., but in the end the government protects _me_ from my _neighbor's_ folly when he bought cheap carp at a discount.

Bill, W1AC

I don't believe that the value judgement was on the part of the FCC. As I recall, its origin was the United States Congress.

http://www.fcc.gov/mb/facts/otard.html

The FCC simply did as they were told, and implemented regulations which enforce the intent of Section 207 of the Telecommunications Actof 1996.

The FCC has repeatedly been asked to expand the OTARD rules to cover amateur radio antennas. They have repeatedly responded that they don't feel that they can re-interpret Federal law to do so... it would go well beyond the wording and intent of the cited law.

If Congress chooses to change the law (or pass a new one) and give the FCC the explicit authority to override CC&Rs with regard to amateur radio antennas, then I have little doubt that the FCC would once again do as they were told, and enact new regulations.

Unless and until Congress acts in this way, the FCC is very unlikely to change the regs... because, I suspect, they're pretty sure that if they did so, somebody would take them to court for misinterpreting the law, and the FCC would probably lose.

If you want OTARD expanded to include an exemption for amateur radio antennas, write your Congress-critter. There have been bills introduced several times in the past few years, to do just this... and they've all died for lack of support.

At the risk of exposing my newbness...

I am considering a tech license and note references to "permission" levels for various bands, as well as indications of certain operating modes for particular freqs/bands (I have not bought a manual yet, still trying to determine what level of total investment will be necessary for my desired use). Based on admittedly cursory review thusfar, it appears voice comms have limited availability for a tech ticket. IF that is the case, my primary interest is in emergency voice comms during regional events...will I need to upgrade to a general license for effective use?

TIA

I was reading the Feb 2010 copy of QST at dinner this evening. And right there in the "Up Front" section was a wonderful article about "How I defied the CCR I signed when I bought my condo and put up an antenna in contradiction to the rules I agreed to."

Do we all have to act like having an FCC grant (license) somehow makes us above the law?

Sooner or later, the homeowner associations are going to catch on about bird houses, flag poles and the like and just simply write into the rules, "No transmitting or receiving equipment."

And we'll have brought it on ourselves by constantly showing our inability to follow the rules.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group every month. You are now reading the first article, which explains what rec.radio.info is, and answers some Frequently Asked Questions. The second article is titled Posting Guidelines, and you only need to read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:

- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit chat about radio. Rec.radio.info will contain informational, factual articles only. Follow-ups are redirected to an appropriate other group, and further discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing

FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

```
/Newsgroups:.*[ ,]rec\.radio\.info/h:j
```

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

```
rec.radio.info:!s/:^
```

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

```
sequence
rec.radio.info
rec.radio.
```

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

In slrn, according to the srln FAQ, the following scoring rule will |
allow you to see rec.radio.info-crossposted bulletins, while still |
filtering out most SPAM or "Velveeta" crossposted to more than 2 |
newsgroups (as such articles usually do not contain a 'Followup-To:' |
header): |

```
Score: -9999                                                       |
        Newsgroups: ,.*,                                           |
        ~Followup-To: .                                            |
```

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

 -- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you

might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather

than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

   rec.radio.swap may be more deserving of the posting in any matter.

   Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we

are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc	Amateur (ham) radio and related matters
rec.radio.amateur.packet	Amateur Packet Radio discussions
rec.radio.amateur.policy	Amateur Radio practices, rules, etc.
rec.radio.noncomm	Non commercial radio discussions

rec.radio.shortwave	International broadcasting on the 'HF' bands
rec.radio.cb	Citizens Band (27 MHz) discussion
rec.radio.scanner	Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated	Amateur radio practices, rules, etc.
rec.radio.broadcasting	Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

 Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

 -- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Amateur Radio Newsline(tm) Report 1693 - January 22, 2010

Amateur Radio Newsline report number 1693 with a release date of Friday, January 22, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T.   Hams come under gunfire as they try to assist earthquake devastated Haiti, amateur radio is victimized by rescue radio hoax in Arizona and the ARRL makes history by electing its first ever woman president. Meet her on Amateur Radio Newsline(tm)

report number 1693 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS ATTACKED IN HAITI

Hams trying to bring communications back to Port au Prince Haiti were forced to flea for their lives. This after the convoy they were a part of was attacked by what was likely a roving band of looters. Bill Pasternak, WA6ITF, is in the newsroom with the latest:

--

Radio amateurs from Radio Club Dominicano who were to be in Haiti under the callsign HI8RCD/HH have had to abort their operations. This, after the convoy they were travelling in was fired on.

The RCD initially reported that on Friday, January 15th, that their team had crossed the Haitian border and headed toward the Dominican Embassy in Port au Prince. Once there they then began installing ham radio equipment but had to abort and flee the area when gunfire erupted.

Within a few hours the RCD Facebook page reported on a telephone conversation between Hugo Ram�n HI8VRS and Ramon Sanyoyo, XE1KK. There it was confirmed that all 8 members of the HI8RCD team were back in the border town of Jimani in the Dominican Republic. None of the hams had been injured but decided to leave the Port au Prince for their own safety and returned across the border unescorted.

Later they were able to establish two repeaters near the Haiti and Dominican Republic border. One is at Jiman� on 146.880 MHz covering Dominican Republic Border and most of Haiti including Port-Au-Prince. This system is linked with 146.970 MHz covering 85% of the Dominican Republic and the west of Puerto Rico. Other reports say that a third repeater near the Dominican Republic border with Haiti is now operational on 145.350 MHz. All machines require a -600 kHz transmit offset and 100 hertz tone for access.

In other Haiti relief news, YV5AMH has e-mailed Newsline to say that two Venezuelan hams identified as YV5JF and YV5VE, were to be operating from a base located 5 Km west of Port au Prince after January 20th. This operation is coordinated between the Radio Club of Venezola and the Office of Communications of the Bolivarian Army. It is strictly in support of Venezuelan humanitarian aid to Haiti. The Venezuelan hams plan to use SSB, BPSK-31 and SSTV on several frequencies in the 80, 40 and 20 meter bands but the exact nature of the communications services that they will be providing was not spelled out in the news release from YV5AMH.

And looking down the pike as it were, as time goes on the need for ham radio High Frequency communications is fast declining. This as satellites are repositioned to quickly restore both international telephone and Internet service to Haiti for aid workers to use.

What is expected to emerge ham radio-wise is a need for more bi-lingual emergency communications operators using 2 meter FM and possibly D-Star for on-island communications as the overall infrastructure of Haiti is rebuilt. Its believed that one group is already in route to Port au Prince to install a 2 meter D-Star machine that could become operational this week.

Also, to those foreign nationals inquiring about obtaining permission to operate ham radio in Haiti. It has to be noted that Haiti is not a signatory to any reciprocal licensing agreement. Also, the building that housed the Haitian Telecommunications Ministry was destroyed by the quake and a number of staff members lost their lives. So at this moment in time there is no way to get a Haitian license or operating permit. Those who might eventually be asked to come should coordinate licensing through the organization making the request.

While several amateur radio groups report that they are ready to send trained operators and communications gear into Haiti, as we go to air there has been no call for hams from the United States, Canada nor any European nation has yet been asked to make the trek. There are several reasons that have emerged. First is the question of language. In recent days it has been reported that any relief workers that are brought to Haiti will have to be fluent in Creole French as that's the language of the indigenous population.

More important is what you are seeing daily on your TV screen. With the chaos in the street, the looting and random violence, Haiti is not a safe place to be without a military escort. And the military is not about to spend its times babysitting hams. Even those hams tasked with rescue radio operations.

More on this story next week. I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

The bottom line. Haiti remains a very dangerous place and its best not to encourage anyone to even think about a self-deployment scheme. This is not a time nor a place for want-to-be heroes, no matter how important that they think their assistance might be. Going there on your own might mean that you will never be seen or heard from again.

**

RESCUE RADIO: HAMS VICTIMIZED BY ARIZONA MAYDAY HOAX

Back in the United States, reports of an injury accident in the desert near Maricopa, Arizona prompted a three hour search that began after an unknown station turned up on several 2 meter frequencies requesting help. And it now all appears to be a cruel hoax as we hear in this report from Amateur Radio Newsline's Norm Seeley, KI7UP:

--

David French, W7FAN, tells Newsline that on Sunday morning, January 17th a unknown operator showed up on several 2 meter frequencies. The unidentified station claimed to have been in a desert motoring accident and in need of help.

The story begins at 10:35 a.m.. That's when Richard Dabney, K6BZZ, in Maricopa was in QSO on the Phoenix 146.94 White Tanks repeater when the unidentified station interrupted his contact to request help. The station then said "Mayday, Mayday, Mayday" and gave information that he and his father were in the desert in a dune buggy and had rolled it over. The operator also stated that his father was a ham and that it was his father's radio that was being used.

The person on the radio stated that he was injured and the passenger was unconscious. He also made comments that led KB6ZZ to assume that the father was the passenger and gave some GPS coordinates before his signal faded out. The initial 911 call was made by K6BZZ.

At 10:45, Dennis Griffin, KD7CAC, copied a station breaking into a special event net on the 146.86 Mt Ord repeater located North-East of Phoenix and also requesting assistance. As there was a public service event taking place on the .86 machine he was moved the station to the 147.36 repeater also on Mt Ord. There, KD7CAC copied pretty much the same information as had KB6ZZ before the station again faded out. Griffin also alerted authorities, This time the Pinal County Sheriff's Dept via its 911 emergency exchange.

Unfortunately, neither operator thought to request a callsign or name on initial contact and the station was gone before they could follow-up. But the GPS coordinates he gave both operators tracked to an area of desert wilderness southwest of Maricopa.

In response, authorities established a command post at the Vija Truck Stop at State Route 84 and Interstate 8. Units from the Pinal County Sheriff's Office and Arizona Department of Public Safety Search and Rescue combed the area, but turned up nothing.

Later in the afternoon, a new set of coordinates was obtained which put the accident scene near Ajo. Pima County officials were notified, but their subsequent search yielded no results as well.

Authorities now believe that the distress calls were a cruel joke being played on the local ham community by a person and for reasons yet unknown. None the less, Maricopa, Arizona, hams proved that they could respond quickly when an emergency situation came their way, even if that emergency turned out to be a phony call for help.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, reporting from Scottsdale.

--

News reports say this is the second such hoax local authorities have received. As with the use this time of ham radio frequencies the motives for the bogus calls are unknown. (W7FAN, Maricopa 360)

HAM RADIO POLITICS: ARRL ELECTS KAY CRAIGIE, N3KN AS ITS NEW PRESIDENT

A historic day in the history of the American Radio Relay League. This as the Board of Directors elects First Vice President Kay Craigie, N3KN, of Blacksburg, Virginia, as the organization's first ever female president. Amateur Radio Newsline's Mark Abramowicz, NT3V, is at our East Coast Bureau with the details:

--

Kay Cragie says she is humbled to have been elevated to such an honor and is pleased the ARRL board had the confidence to entrust her with such an awesome responsibility.

Craigie, who began her service to the ARRL and its membership in 1986 as the Eastern Pennsylvania section manager, says she also recognizes the legacy of her predecessors.

"If you stand in the lobby at ARRL headquarters, you see photographs of all the presidents of ARRL going all the way back to Hiram Percy Maxim, W1AW," Craigie says. "I'm here to tell you when you think about joining that list of amazing, outstanding radio amateurs, if it doesn't throw you for just a little bit of a loop there's something wrong with you.

"Because these are people who had a tremendous contribution to amateur radio and I am just unbelievably honored to be joining that group."

Craigie moved up the ARRL ladder pretty quickly, becoming the Atlantic Division vice director in 1990 and then director in 1996.

N3KN was elected a vice president in 2000, and moved up to first vice president in 2006.

Craigie says during that time, she got the chance to work on many of the challenges facing the amateur radio service.

"We were believing that Part 15 devices were going to be a challenge for amateur radio," Craigie recalls. "Boy were we right. The whole issue of broadband over powerlines - not so much BPL but the interference that BPL can create - has been a real issue for us over the last several years. We're still working on that one."

"Another challenge that we're now seeing is the increasing demand for spectrum for mobile broad-band," she continues. "I have a Smartphone, lots of radio amateurs have Smartphones. We're using them. They gobble up a great deal of spectrum to serve us the way we want them to.

"And, the ARRL's job is to make sure that meeting the needs of that industry doesn't cut into the spectrum that amateur radio operators have to use and to experiment with."

Craigie says one of the big efforts she is committed to is attracting more qualified and dedicated people into the amateur radio service.

"We're making good strides on that, thanks to the efforts at the grass roots by individual instructors and radio clubs and groups who are getting out the word about amateur radio and helping people become licensed," Craigie says.

"Of course, we'd like to have more younger people involved in amateur radio. Amateur radio is a fellowship based on achievement. Everything else is just a demographic factoid, really.

"Achievement is the key and that's why amateur radio is so good for young people in that it stimulates them to achievement of a very positive and constructive kind and the League wants to do what we can do in cooperation with local hams to promote more young people getting involved in amateur radio."

Craigie - now a retired educator - was tasked to develop what became the league's Education and Technology program. She says it continues to work on a number of levels.

"This project is ongoing, it's successful, it has achieved things beyond my wildest dreams," Craigie says.

"And the League is very pleased to continue to offer school teachers the skills and the knowledge that they need to bring amateur radio into the classroom and help kids get excited about education, excited about science, about technology about social studies, about languages - all the different things that you can use amateur radio to support in the classroom."

Finally, Craigie says, one of her top priorities is to continue to promote the valuable public service role of amateur radio.

"When you have situations where infrastructure is crippled, overloaded, amateur radio, as we say, is what works when all else fails," Craigie says. "And, in the circumstances like what we have in Haiti right now, of course, it's tremendously dangerous.

"We've seen news stories about amateurs who have attempted to help and then had to fall back to safer positions. But, amateur radio for the foreseeable future will be in a position to assist the authorities and to assist charitable relief agencies to help the public.

"Whether it's helping the public in our own communities, elsewhere in our country or in some cases, around the world. And we certainly commend the hams who have the dedication and courage to do that.
"And, of course we also encourage them to take some note for their own personal safety in those circumstances where that's a real issue."

You can download my entire interview with Kay Craigie from our website at www.arnewsline.org. Just scroll down to the words "Kay Craigie interview" and right click on the word "here" to save the file to your computer."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Kay Craigie, N3KN, assumed the reins ARRL from outgoing President Joel Harrison, W5ZN, at the close of the Annual Meeting. In October, Harrison had advised the Board that he would not seek re-election.

(ARNewsline(tm) with biographic information from ARRL)

**

HAM RADIO POLITICS: CHANGES TOP THE ARRL LEADERSHIP

The elevation of Kay Craigie to the presidency has lead to several other changes in the ARRL higherarchy. As a result, Vice President Rick Roderick, K5UR, being elected First Vice President and Midwest Division Director Bruce Frahm, K0BJ, elected to the Vice President position. This has created a vacancy in the Director position in the Midwest Division where following natural order of succession Vice Director Cliff Ahrens, K0CA, will take over as Director.

Another change was the election of Dakota Division Director Jay Bellows, K0QB, as International Vice President. Dakota Division Vice Director Greg Widin, K0GW, will move up to Director in that Division.

Last but by no means least word that ARRL Technical Relations Manager Brennan Price, N4QX, has been elected ARRL Chief Technology Officer. He replaces Paul Rinaldo, W4RI, who retired from the staff in 2008 but retained the officer title through the end of its two-year term.

**

RESTRUCTURING: FCC ELIMINATES PART 23 OF ITS RULES

The FCC has issued an order that eliminates Part 23 of its Rules. Part 23 governed the International Fixed Public Radiocommunication Services.

According to a Commission January 14th release, this change eliminates an outmoded service and makes the frequencies available for other services. Among the re-purposing of the spectrum involved is to provide for newer disaster recovery communications services.

The Commission's rules defined the now defunct International Fixed Public Radiocommunication Services as a publicly available fixed service between the United States and foreign points that was created in the 1930's. For many years facilities on those frequencies provided an important form of international communications. More recently it was used for point-to-point microwave services.

You can read more at:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-10-7A1.doc (CGC, FCC)

**

RESTRUCTURING: BROADCAST TV VS. WIRELESS BROADBAND CONTINUED

The FCC appears to be backing off on reallocating broadcast spectrum for broadband, or so it seems according to a report from John Eggerton of Broadcasting & Cable Magazine. In his article Eggerton quotes Phil Bellaria of the FCC's broadband planning committee as saying the current plan being prepared for Congress does not include enforced reallocation of broadcast spectrum but includes a clause of what he terms as a voluntary opportunity.

By way of background, the FCC began suggesting such a spectrum reallocation late last year. This only weeks after the conclusion of the digital television transition. That's when the Commission's Blair Levin first mentioned the idea of taking broadcast spectrum for the national broadband plan and likely place it in the hands of wireless telephone service providers. A wireless industry spokesman had said that wireless broadband will need at least 800 MHz of additional spectrum in the next six years.

Broadcast TV occupies 300 MHz and according to Wireless Week, the wireless industry maintains that the record overwhelmingly demonstrates there's a need for additional spectrum for mobile broadband services. This includes the almost 300 MHz allocated for broadcast television use which the wireless industry appears to see as being spectrum most favorable to mobile broadband. (B&C)

**

ENFORCEMENT: FCC ISSUES CITITAION FOR UNAUTHORIZED WIRELESES VIDEO CAMERA

The FCC has issued an official Citation to Pinecomputer of Covina, California. This, for marketing unauthorized radio frequency devices in the United States.

According to the FCC, an investigation by the Enforcement Bureau's Los Angeles Office revealed that on November 10, 2009, Pinecomputer marketed model W203CA, 1.2 GHz wireless surveillance cameras and associated receivers which have not been approved for sale by the regulatory agency. The agency maintains that Section 302(b) of the Communications Act provides that no person shall manufacture, import, sell, offer for sale, devices which fail to comply with the FCC regulations in this area.

Violations of the Act or the Commission's Rules may subject the violator to substantial monetary forfeitures, seizure of equipment and criminal sanctions, including imprisonment. The FCC gave Pinecomputer fourteen days to request an in person meeting with the agency to discuss the allegations. (FCC)

THE CHANGING OF THE GUARD: DAVE INGRAM, K4TWJ - S.K.

It is with great sadness that we report that our longtime friend and CQ Magazine columnist, Dave Ingram, K4TWJ, became a Silent Key the morning of January 20th. This as the result of complications from a massive heart attack he suffered on New Year's Eve.

Dave Ingram, K4TWJ, had been writing for CQ at least since 1981 and has been a CQ columnist since 1982, starting with an amateur television column called World of Video. That column eventually broadened its outlook and became Dave's signature monthly column in CQ known as the "World of Ideas." Regular topics included Morse code keys, stealth antennas, building "new vintage" tube gear and mobiling.

In addition, for the past decade, Dave has been CQ's QRP Editor and "How it Works" columnist. His enthusiasm for whatever caught his interest was contagious and spread widely through his informal yet educational style of writing.

But more than anything else, Dave was simply a nice guy. He was a ham who loved the hobby and blessed with the God-given ability to share that enthusiasm with anyone with whom he came in contact.

As this newscast is prepared funeral arrangements are not complete. Additional information will be posted on the CQ website news page when it becomes available. Condolence cards may be sent to Dave's wife, Sandy, WB4OEE, at their Callbook address. Contributions in Dave Ingram's memory be made to the American Heart Association

73 old friend. You will truly be missed.

RADIO HONORS: DAYTON HAMVENTION SEEKING AWARD NOMINEES

The Dayton Hamvention� is once again soliciting nominations for its highly coveted Radio Amateur of the Year, Special Achievement and Technical Excellence awards. To many radio amateurs these are considered the ham radio equivalents of the entertainment industries Tony, Emmy and Oscars.

The Radio Amateur of the Year is someone who has devoted the better part of his or her life to improving the overall state of Amateur Radio. The Special Achievement Award is presented to a radio amateur whose one time accomplishment has had a significant and positive impact on the hobby. The Technical Excellence Award is given to an individual whose expertise in the scientific aspect of the hobby has lead to advancement in the overall state of the art. And this year, there will also be a onetime only a Club of the Year award. This to coincides with the 2010 Hamvention theme which is "Amateur Radio Clubs Worldwide: the Lifeline."

Applications for these awards can be found www.hamvention.org/awards.php. Submissions by e-mail go to awards@hamvention.org or via regular mail to Hamvention� 2010, Attention Awards Committee, Post Office Box 964, Dayton, Ohio, 45401. And less we forget, the cutoff date for submitting all nominations is March 15th. (Hamvention�)

**

THE SOCIAL SCENE: SPEAKERS NEEDED FOR HAMVENTION TOWN MEETING

If you have ever dreamed of being a speaker at the famed Dayton Hamvention�, 2010 may your chance to make that dream come true. Each year Amateur Radio Newsline� produces and hosts the Ham Radio Town Meeting at the Hamvention�. And with the world financial recession continuing and so many people still out of work, we got the idea to dedicate this years session to advising how having a ham radio license might be a way to open doors to employment. If you are one of those people who landed a job because of your experience as a radio amateur, we would love to have you tell your story at this years Ham Radio Town Meeting.

OK, there are a few caveats. First off, you are on your own as far as travel and accommodations. The Hamvention� no longer pays the expenses for speakers. Also, you will only get 10 minutes to tell your story after which you will be expected to answer questions from the audience at the Hara Arena and possibly those on-line in their homes.

If you are interested in being a presenter please e-mail us an outline of your proposed presentation to newsline (at) arnewsline (dot) org. Please be sure to include your postal address, e-mail address, phone number and other contact information. We will look over all submissions and get back to you if what you have to say fits with the goal of this year's Hamvention� Ham Radio Town Meeting.

This year's Ham Radio Town Meeting takes place on Saturday, May 15th at the Dayton Hamvention�. We look forward to hearing from you. (ARNewsline(tm))

HAM RADIO IN SPACE: A SOUNDS OF SPACE WEBSITE

Turning to ham radio space related news, word that DD1US now has an extensive collection of sounds from manned and unmanned space exploration including amateur radio operations on his website. This includes historic recordings like Sputnik 1 and Apollo 11. There is even a page devoted to clips of Amateur Radio satellites from Oscar 1 to Oscar 68. Its all on-line at www.dd1us.de. (Southgate)

**

HAM RADIO IN SPACE: FO-29 TO RETURN TO THE AIR

Fuji Oscar 29 ground controllers at the Japan Amateur Radio League plan to open the satellite for amateur radio use but it may not remain operational after eclipses due to power limitation issues. Depending on the power budget the JARL may need to selectively cancel satellite on time. All hams are reminded to please use as low power as necessary on the uplink to complete their communications. (JE9PEL)

**

RADIOSPORTS: WSJT GROUP SPRING ON JANUARY 30

The first 2010 WSJT Group Sprint will be held on January 30th which is the last Saturday morning of the month. The rules will stay the same as for the last Sprint in April of 2009 and are posted at contest website at. http://www.ykc.com/wa5ufh/Sprint/W5WVO_Sprints.htm

For those who have never heard of a Sprint, these are short duration contests usually aimed at promoting activity on a given band or using a specific mode. In this case its to encourage the use of the WSJT low noise digital communications mode developed by Joe Taylor, K1JT. Subsequent Sprints for 2010 will be on February 27th, March 27th, and April 24th. (W5WVO)

**

RADIOSPORTS: DX MAGAZINE PUBLISHES 2009 MOST WANTED RESULTS.

The DX Magazine's "2009 Most Wanted Survey" has been posted on the publications Web site and printed in the January / February issue. The top five most sought after entities appear to be number five Yemen; number four Bvouvet Island; number 3 Marion Island, number two Navassa Island. The number one most wanted country is North Korea.

The survey was conducted between September and October of 2009. The listing shows the top 100 World-Wide most wanted and also includes their 1998 comparison ranking for 2008. Its on line at dxpub.com/dx_news.html/ (DX Magazine)

**

DX

In other DX, EA5BYP and EA5KM will be active from Annobon Island sometime in April. Dates and callsigns will be announced soon. Their will be on 160 through 10 meters using CW, SSB and RTTY, with an emphasis on the lower bands and Morse. More on this one as information is released.

JA8BMK will be active from Juan Fernandez Island as CE0ZA through February 2nd. His operation will
be on 160 through 10 meters using CW, SSB and the Digital modes. QSL direct only to JA8BMK.

W7EJ, will be active from Morocco as CN2R during the CQ 160 Meter CW

Contest on January 29th through the 31st. This as a Single-Op/High-Power entry. QSL via W7EJ. And MJ0ASP will also be active from Morocco. Look for him as CN2MR between February 18th to the 26th. His activity will be on the HF bands using mostly CW. QSL via his home callsign

Above from various DX news sources

**

THAT FINAL ITEM: LORAN-C NAVIGATION SYSYEM GOING QRT

And finally this week, its time to say goodbye to the old LORAN-C radio navigation system is soon going QRT. Frank Haas, KB4T, is here with the story of a longtime friend to sailors world-wide:

--

LORAN is an acronym for the words long-range navigation. It's a radio navigation system that was developed during World War II for military ships and aircraft. It then was then perfected for civilian use and entered full time service in 1957.

LORAN-C operates in the low frequency portion of the electromagnetic spectrum from 90 to 110 kHz.. It has transmitted the past 52 years from 24 stations operated by the Coast Guard to determine positions at sea or in the air.

For decades, LORAN-C was the standard navigation system for ships, fishing boats, and other vessels. It also served as a supplemental navigation aid on many small to medium sized aircraft. And at its peak popularity, an estimated one and a half million LORAN-C receivers were in use.

But in the mid-1990's mariners and pilots began turning to global positioning systems for its almost pinpoint accuracy. Gradually, use of LORAN-C fell away. Now the Department of Homeland Security says that LORAN-C has become obsolete and is no longer needed for navigation or safety.

Most of the nation's LORAN-C transmission stations will be turned off on February 8th with the remainder being powered down by October 1st. This termination of service does not affect U.S. participation in the Russian American or Canadian LORAN-C chains. U.S. participation in these operations will continue at least temporarily in accordance with international agreements.

From Holly Hill Florida, I'm Frank Haas, KB4T, reporting for the Amateur Radio Newsline.

--

Some had thought that the government might keep LORAN-C as a terrestrial back-up system for the satellite based Global Positioning System but the Department of Homeland Security seems to believe that doing so is not a necessity. (Science OnLine, Boston Globe and various other published reports)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. Beachbum wrote:
> At the risk of exposing my newbness...

At the risk of showing unbounded enthusiasm that there's someone who is looking into entering this fine hobby . . . WELCOME!

> I am considering a tech license and note references to "permission" levels for various bands, as well as indications of certain operating modes for particular freqs/bands (I have not bought a manual yet, still trying to determine what level of total investment will be necessary for my desired use).

I suggest the ARRL web site. Specifically to address this question, see http://www.arrl.org/FandES/field/regulations/bands.html where you can access various sizes of a graphic that will show you which bands are available and what kind of operating (phone, code, etc.) is allowed on each. Unfortunately, this is perhaps the trees when what you are looking for is the forest. If you poke around on the site, you'll find more general information that will give you background on the hobby and explain what the various frequency bands are good for.

> Based on admittedly cursory review thusfar, it appears voice comms have limited availability for a tech ticket. IF that is the case, my primary interest is in emergency voice comms during regional events...will I need to upgrade to a general license for effective use?

The short answer to this question is, no.

The Technician class license has full privileges, including voice, on frequencies that are dubbed VHF and UHF. At these frequencies, communication is "limited" to line-of-sight. However, hams have built repeaters, which generally are on some high place and are line-of-sight to a large area. The bottom line is that the Tech privileges allow you to communicate over most large urban areas.

This is the mode of ham radio that is used for the vast majority of communication during disaster events and public service events. When you see a ham talking into a handi-talkie, he's using one of the frequency bands that the Technician license includes. For short- to medium-range tactical communications, this is the equipment of choice and most of the participants hold the Technician class license.

The lower frequency allocations, which are not available to the Technician license, are useful for longer-range communications. At these frequencies, the radio waves bounce back from the upper layers of the atmosphere, making it possible to communicate around the world. It's quite rewarding to contact someone on the other side of the earth, using just your own equipment. As you can see, there are many aspects of the hobby, and once you get into it you may decide that you want to move into areas other than regional events. Or not . . . it's your choice.

73, Steve KB9X

I believe that the stealth concept has some problems. The main one is that it sort of creates civil criminals, at least in our case.
But for my money, if the homeowners association says no antennas, then it's no antennas.

I live in a thoroughly modern neighborhood, and we don't have antenna restrictions, except for a radius-drop tower restriction - not that a tower is likely to fall that way. NIce well kept houses, and the Ham radio folks all get along with their more normal neighbors. My neighbors actually like to watch my antics.

But here is the clue to the whole thing. Either don't live in a neighborhood with antenna restrictions, or if you have deep pockets and want to be a nuisance, get a lawyer and sue. I know that some are going to say "You can't find a development like that. Park Forest, just north oh State College PA begs to differ. No HOA either. Most respectfully, anyone who lives in a development with an HOA just has to know that restrictions are part of the package, even if some seem arbitrary and even capricious. The restrictions allow the tenants to feel superior. We have one in our area that does not allow any outside decorations or drying clothes outdoors. I think you have to agree to keep your garage door shut at all time (except for ingress and egress) Point is, don't live there.

Side note. I was doing a public service bike-hike ride support. part of it went on a township road through one of those neighborhoods. Suddenly a van pulls up and a guy hops out. "What are you doing here?" he says. The YL who was manning the station was a little concerned - it looked almost like an abduction. Anyhow, we explained the bike ride we were helping with. He wanted to know why, as the President of the local Homeowners association, he wasn't informed or asked permission to do this. Then he said he was doing to call the police. At that point, I took out my cell phone, and said Fine, I'll even help, Ken (yes I knew him). I'm going to call the Police, the Charity we're doing this for, the newspaper and the local radio stations. Still want to do this thing? He thought better of it, got back in the van, and left.

Point is, if you live in such a neighborhood, that is what you get. Don't live in such places if you want to enjoy Ham radio, there are people who want to control your personal life

I agree with your bottom line, Mike. But we've beat this topic to death in this newsgroup, and I can pretty much predict where the discussion will go.

My comment on this general issue is that the non-ham population develops their impression of hams based on what they see and hear. When they see hams helping out in the community by assisting with a public event or teaching radio to the local Boy Scouts, the impression is a positive one. When they see the guy with a bunch of unsightly antennas whose house is a blight on the neighborhood, or the one who flaunts the CCR that they signed, the impression is negative.

Our hobby seems to be cursed with a higher percentage of people who are oblivious to the concerns of their neighbors or the rest of the general population. These are the folks who tend to be visible and influence the impression of ham radio for the general public. Or maybe I'm just suffering from the same effect; it's not the ham who is cooperating with the Boy Scouts that I see, but the one with six towers erected on his city lot.

We need to be more proactive at getting the positive side of ham radio out into the public eye.

73, Steve KB9X

Some hams have added other radio equipment to link together several
repeaters to cover large areas. One linked system in the western USA
is the Intermountain Intertie http://utahvhfs.org/snowlink.html which
covers much of central and southern Idaho, southwestern Wyoming,

northern Utah, western and southwestern Utah, northwestern Arizona,
and northeastern and southeastern Nevada.

The ultimate repeaters, range-wise, are the satellites which hams have
placed in orbit. See http://www.amsat.org/ It is possible to
communicate using these satellites with a hand-held 5-watt radio and a
hand-held directional antenna.

Amateur radio equipment is standard on the International Space Station
(ISS). Most of the astronauts are licensed hams, and in their spare
time they will get on the radio to have fun.

The satellites and the ISS all use VHF and UHF frequencies which a
Technician license covers.

The ultimate long-distance path is bouncing your signals off the moon
and back to earth. See
http://en.wikipedia.org/wiki/EME_%28communications%29
The Technician license covers this.

If your desire is to communicate locally for Emergency Services, you would normally operate on VHF and/or UHF frequencies, which are all open to the Technician license. If you want to communicate further, where VHF/UHF simplex or repeaters won't go, then you would need to upgrade to General to be able to operate voice within the HF bands. For example, if you wanted to participate in the emergency nets for the Haiti earthquake, you must have at least a General class license.

Take a look at the chart at

http://www.arrl.org/FandES/field/regulations/Hambands_color.pdf

which will show you what modes the classes of licensees can use on the various bands.

I think you'll find that a Technician class license will give you full permission on all bands 50MHz and up, which is where is where you'll find almost all local event communications taking place.

I see this whole thing rather differently.

I agree that any ham who wants to have a station at home should buy a house without antenna restrictions. Same as someone who wants to have, say, a vegetable garden should buy a house without vegetable-garden restrictions. Etc.

But I think there's a growing mindset that, for a neighborhood to be "nice", almost everything that someone might find unattractive must be prohibited. And since there's almost nothing that *somebody* won't find unattractive, almost *everything* is prohibited, or strictlyregulated.

I can see the point that a ninety-foot tower on a quarter-acre lot is out of scale. Or when a homeowner lets a place fall to ruin, something needs to be done.

But when a ham can't have a wire dipole in the back yard of a half-acre wooded lot, something's wrong. When the satellite TV folks have to go all the way to the Supreme Court to get preemption to have dishes the size of a large pizza, something's wrong. When American citizens, some of them decorated military veterans, are sued and threatened with eviction for flying the American flag in their own front yards, something's wrong.

Real estate isn't like other things in that it's not portable and the supply is limited. For most people, their home is their biggest investment, and moving is a major event. Many hams simply cannot afford to move just so they can have an antenna. I suspect that antenna restrictions are a major cause of low growth in Amateur Radio in the USA, because why get a license if you can't have a decentstation?

It seems to me that if the rules allow a flagpole, birdhouse, plant trellis, etc., but not antennas, then what's wrong if one of those things has a dual function?

Michael J. Coslo wrote:

> Side note. I was doing a public service bike-hike ride support. part of it went on a township road through one of those neighborhoods. Suddenly a van pulls up and a guy hops out. "What are you doing here?" he says. The YL who was manning the station was a little concerned - it looked almost like an abduction. Anyhow, we explained the bike ride we were helping with. He wanted to know why, as the President of the local Homeowners association, he wasn't informed or asked permission to do this. Then he said he was doing to call the police. At that point, I took out my cell phone, and said Fine, I'll even help, Ken (yes I knew him). I'm going to call the Police, the Charity we're doing this for, the newspaper and the local radio stations. Still want to do this thing? He thought better of it, got back in the van, and left.

Actually what you ran into was some officious idiot with no authority attempting to assert authority over you. Let me note that theoretically streets belong to the governmental entity in which said street is located or some entity which the governmental entity is part of (i.e you can have a state or county road in a small township, it might not belong to the township, but it sure does belong to some governmental entity) and as such, private individuals have no right or privilege of passing on who or what moves on a public street.

The statement advising hams not to move into a development with either home associations or CCRs strikes me as poor advice. There are few locales without one or the other left in the US, and most used boiler plate to bar antennas.

I personally would love to see CCRs and home owner associations expire after some extended period of time like ten years, we thus would not end up with the banning of clothes drying or antennas.

OK, Great! And thanks to all who responded.

As I am located about 2/3rds the way up the side of Punchbowl Crater, my "line of sight" should easily cover most of my operating area in the Honolulu area, including several mil bases, multiple airports and seaports, as well as State and County HQ's. If repeaters remain operational, the rest of the island should be accessible as well, to some extent. Aside from that, I've had a scanner for over 40 years at this point, and pick up a lot, but two-way comms would become critical in a Hurricane or Earthquake scenario.

Now to order the manual and start studying...

I'm inclined to disagree with you, but I don't have any more factual or statistical information than you do to make or refute such a statement. I wonder if such information exists; is there some compilation of data that says that xx% of home sales included some kind of restriction?

It also depends on where you are geographically. Here in rural Minnesota such restrictions do not exist. But not everyone yearns to live in rural Minnesota . . . especially at this time of the year <grin>

I just noodled around the ARRL website and couldn't find any statistics.
Here in the Bay Area, anecdotal evidence is very strong that nothing
besides federally protected pizza dishes are allowed.

>It also depends on where you are geographically. Here in rural
>Minnesota such restrictions do not exist. But not everyone yearns to
>live in rural Minnesota . . . especially at this time of the year <grin>

:-) Which explains why the residents of Lake Wobegon just spent two
weeks here, instead of their customary one-week visit to other cities...

Patty

And that's my point.

A friend of mine, while living in an apartment, unrolled aluminum foil in a double folded dipole and thumbtacked it to his ceiling.

And while living in Culver City, after they introduced a limit to the number of external antennas (rather broadly worded) We just moved some of the fixed point to point antennas inside the attic.

Interestingly enough, in the original article in QST, when asked "What are the wires going to the birdhouse for?" He answered. "It's for a weather station."

Hrmmm, obviously knew the "I have an antenna in violatioin of the rules" was the wrong answer.

Nor do they in Ranger, for that I'm thankful. I don't think I'd like here as much if there were suddenly 25,000 people here.

The key word there is *public*. In some developments the streets are part of the development, a osrt of common driveway. Some local governments like this because it relieves them of the responsibility of snow removal, repair, etc.

> The statement advising hams not to move into a development

I disagree 100%!

In many parts of the USA, there are plenty of homes that allow antennas. From my limited experience, they are usually older (pre-1970s) homes in established neighborhoods.

I think what happens in many cases is that people limit themselves to new construction, townhomes, or similar planned communities where rules and limitations are all part of the boilerplate. In some parts of the country, where growth has happened mostly in the past 20-30 years, much of the housing stock is like that. Particularly the less- expensive homes, oddly enough.

When I moved to my current house 10 years ago, one of the first things I did was to explain to the Realtor what was Not Acceptable. One of those things was a place with no-antennas restrictions. Another requirement was that I and my RE lawyer be able to see any deed restrictions, covenants, etc. before making an offer.

> I personally would love to see CCRs and home owner
> associations expire after
> some extended period of time like ten years, we thus would not > end up with
> the banning of clothes drying or antennas. �

The problem is that most of them are specifically set up to be self-perpetuating, and to make changing the rules all but impossible.

And even if every amateur now licensed decided to never buy another restricted home, we'd still have the problem of hams who currently live in them, and of people who live in them and who want to be hams.

I think the bigger issue is this: Why is there such interest in restricting what other people can do?

Good question! But what we need is even more specific, such as how many homes in a specific price range, etc.

> It also depends on where you are geographically.
>�Here in rural
> Minnesota such restrictions do not exist.
> �But not everyone yearns to

I yearn to live in rural Minnesota. Or New York State, Maine, and many
other places - any time of year.

But for most of us, there has to be a suitable job. Or jobs, in
manycases.

But *is* it a violation? If the HOA people considered it a birdhouse,
and if tall birdhouses are allowed, then maybe he didn't violate the
CCRs. Or at least only in spirit, but not according to the letter of
the CCRs.

I'd wager that the CCRs didn't specifically say, "No outside
antennas with the exception of those that look like bird
houses."

My point is, what part of no outside antennas permitted don't
people understand?

I used to do a lot of closings, most developments and housing tracts built after 1973 had either the original builder or the successor home owners' association include that as a deed restriction.

The restriction is also provided in models for lawyers to draft such restrictions so they will stand up in court. I only only of a few locales in Illinois (a ham lawyer drafted models) where it's not boilerplate.

I'll put it this way, if you want a boring day, go to your local county recorder's office and try to find a division that doesn't include them one way or another. Older locales and most big cities don't have said restrictions, of course, lots are smaller and there are likely to be offsetting problems like for example fear of children climbing your tower.

This is a tricky proposition. If the private way is open to the public only reasonable restrictions are allowed. Thus restricting hours large trucks may make deliveries might be reasonable but the private way also has to give notice that it's private unless it's patently obvious. Thus, you can't parade in someone's driveway without permission and meeting all legal requirements for a parade. I further note that HOAs usually don't want to own roads and streets precisely because then they have to be paid for by the HOA's membership rather than tax dollars.

I'd wager that the CCRs didn't specifically say, "No outside
antennas with the exception of those that look like bird
houses."

My point is, what part of no outside antennas permitted don't
people understand?

I live in a CC&R'ed community, but the CC&Rs were written with an escape
clause which I executed back in 1990. However, none of my neighbors have
ever challenged my property's status despite my 15 antennas (of which 3 are
covered by FCC rulings and state law for TV and satellite reception).
However, I did work out placement with them - but it didn't affect any of
their "city views."

To Jeff: What part of "unenforced CC&Rs" don't people understand? Failing
to complain eventually estops an action when too much time has passed.

It would be useful to read the specific rules. The article doesn't say
the rules prohibit antennas, it just says they *concern* antennas. It

is very possible that the rules don't prohibit antennas outright, just restrict their appearance. Obviously W0ES's arrangement complies with the aesthetic requirements of the rules!

==

While one has to live with the rules one agrees with... one also has to suspect the widespread deployment of such rules is destructive to our hobby. An existing ham may or may not have the option of selecting a home without CC&Rs when looking for a place to live. A young person considering taking up ham radio is not going to be having much luck getting his parents to move so he can have some antennas -- he's probably going to give up on ham radio & take up Linux instead.

It's not difficult to see other hobbies suffering from this aesthetic intolerance as well. Amateur auto mechanics, for one. People who are *not* hams are beginning to get fed up with this as well.

AFAIK that depends on the locality. I know locally if one CC&R is not
enforced the courts -tend- to want to ignore all of them.

A point to consider, if there are CC&R (say like banning antenna''s),
but there is no HOA. In most localities the CC&R has to be enforced by
private court action of another home owner. Since their court costs have
to come out of their personal pocket, it does really reduce the odds of
the CC&R being enforced

After having been the architectural control committee where I live, and researching CC&R's extensively I hate to tell you that these things are almost everywhere now. The pea brained real estate sales people somehow think they're good and preserve property value. But after some point in the early 80's almost any land subdivision included restrictions, and pretty universally included language regarding antennas. Before that the language may have been directed toward "structures" not antennas. It also seems to be more prevalent regionally. That could have something to do with when a particular area experienced rapid growth. (like here near Austin, TX)

So the amateur is faced with no operation or bending the rules. Jeff may be in a nice situation there, but I see it as less than black and white issue. I also balance it in a way that causes no issues. I have a HF6V in the backyard, and a 440 vertical back there too. The 440 antenna is somewhat visible from teh street, the HF6 isn't, obstructed by a tree. The neighbor can see it, but they know that the moment they say anything is when I go after them for their barking yip-dogs, which I see as a worse issue than antennas.

There's nothing to suggest he violated any conditions.

Such rules are generally for esthetic reasons, and he probably
followed them to the letter.

Of course not. But they may do just the opposite: they may talk
about antennas that look like antennas. Or more likely, they're
just very vague.

Patty

From the perspective of a property owner, restrictions generally do preserve property values. From your perspective as a ham, they are horrible things that prevent you from exercising your rights and enjoying your hobby. Both contingents can mount persuasive arguments to support their opinion.

Hams must be careful to realize that earning an amateur radio license and the ability to operate a radio station is a privilege, not a right. There are plenty of other examples in life that are analogous, such has having a driver license. There is, however, that famous clause in the Constitution regarding "the pursuit of happiness." But moving right along....

I was fortunate to be able to erect some kind of antenna in the two CCR developments I lived in in southern AZ over the course of 23 years, even though the "anti-antenna" statement was in the CCR books. No one ever said 'boo' about my antennas. But, then, my neighbors liked me. And, I never asked permission. And I always used my electric clothes dryer.

Howard

On Jan 23, 1:14 pm, N...@AOL.COM wrote:

> I think the bigger issue is this: Why is there such interest in
> restricting what other people can do?

IMO, a couple things. One big thing was that antennas kind of got in there as collateral damage. This is pure conjecture, but the biggest beneficiary of antenna restrictions was the cable TV industry. Even though they had a superior product, if you couldn't put up a TV antenna, it seals the deal. No exceptions were made until the sat TV people made a very similar product with an antenna that is pretty unobtrusive.

Second thing is perhaps one of the less pretty parts of human nature. A lot of people believe that they know what's best, and they have no problem imposing what they know on other people. If a contract in development A has one page of activity restrictions and development B has three, then by their logic, Development B simply has to be "better". That's my guess anyhow.

In some 'hoods, the Birdhouse might be the wrong color. And perhaps as
a birdhouse it is fine. But certainly as antenna it is probably not.

It's a very good point, Ralph. A person who lives in a place with an HOA at some level wants to live there and is accepting of that fact. One of the other less pretty aspects of human nature is that there are people who either want to mess with the HOA, or want it, but want special privileges. I would personally find it a little odd that a person who is accepting of such intense outside control would under normal circumstances both live in such a place, and simultaneously want to put up a AR antenna.

You betchya! We have neighborhoods in my area that dictate almost every facet of your domicile, from yard appearance to house color and style.

And believe it or not, there is a fairly early development around here that has as one of it's restrictions,a racial clause. As you might guess, that one isn't enforced, but it is abhorrent and while early mortgage holders still have their signed documents to that effect - it isn't enforced.

> So the amateur is faced with no operation or bending the rules. Jeff may be
> in a nice situation there, but I see it as less than black and white issue.

And yet I can find dozens of available, nice houses in our area that allow me to put up what I want.

Implied in all of the CCR issues is the unstated part that the prospective station operator wants to live in the nice subdivision, with other people of like mind and status, but want's that one little change that will allow him to do what he wants to do. He doesn't want to live somewhere else.

I chose a different path. I live where I'm allowed to put up antennas. I'm violating no laws or covenants. If other people's situation differs, its more likely to be a matter of that they care more about whatever attracted them to their neighborhood than they care about amateur radio.

I saw the convenants and restrictions before signing the papers (a law here in California), but had no choice given my geographical and financial needs.

I'm not going to argue from a constitutional perspective. A contract is acontract.

Nevertheless there are creative ways to erect an antenna and get on the air unobtrusively. One option is a portable antenna you can put up at night and take down during daylight hours. I leave it to you to decide how to implement this.

Another option is an indoor antenna. When I put up my indoor 20 m dipole in 2008, it performed pretty poorly. Now that conditions have improved, I'm actually able to work some DX, and can work most of the stations I hear. As the cycle 24 progresses, I'm sure the indoor system will be more thanadequate.

Another option is using a *dummy* satellite feedline as an endfed 1/2 wavee or random wire antenna.

Or load up your rain gutters.

I don't know of any study showing that antennas lower property values. For that matter I don't know of any showing that outdoor clotheslines lower values either. It's a claim that appeals to those opposed to antennas, but it doesn't seem to have backing in the real world.

Guess it's time to mention the "awntenna" again. :-)

http://www.wintertime.com/OH/73.jpg

The folks at "73" got diagrams 1a and 1b reversed, so take that into account.

Here's a closeup of the indoor verted-vee ("rabbit ears") backup antenna mentioned in the article:

http://www.wintertime.com/OH/sebastian.jpg

That article was written 24 years ago (yikes!), so I'm sorry to say that Sebastian is no longer with us. I have a cat now, but her ears are way too short for HF.

I ended up working around, I think, 130 countries before I decommissioned the antenna.

Patty

Maybe.

Or maybe they don't have much choice.

Real estate is different from other things in that it's not portable. Plus you can only buy what people want to sell.

What I mean is that if your job is at X and your spouse's job is at Y and the decent schools are at Z, there's a practical limit on where you can live and not spend your entire life commuting. On top of that, most people have definite money and time limitations.

The result is that, in at least some cases, there aren't so many options to buy a non-restricted place. Particularly when there's atime limit.

> One of the other less pretty aspects of human nature is that

> and simultaneously
> want to put up a AR antenna.

There's also the case of the person who was not informed of the rules and limitations.

Some years back I considered moving, and looked at a number of homes in my area. All of them had nice fact sheets and disclosure sheets to look at and take away. None of them - absolutely none - mentioned an HOA, CC&Rs, etc. Most of them had some CC&Rs, but the unsuspecting homebuyer wouldn't know that until closing - if then. When your old house is sold and your stuff is on the truck and you're at the closing, it's just too late.

Some might say "do your research first!" and that's good advice. But back when I was looking, the RE market was so hot around here that a house would go on sale at noon and have three no-contingency offers, often at or above the asking price, before the sun went down.

But people renegotiate contracts all the time. Athletes are one example. Divorce is another - people make a contract "until death do us part" with no escape clause, but then they split up and negotiate who gets what.

Somebody mentioned racial CC&Rs - those were contracts when written, but they are unenforceable now. I suspect that CC&Rs restricting people of certain ethnicities, religions, occupations or political views would be unenforceable too.

There's a case I read of where grandparents living in an "over 55" community are being told they have to either move out or send their grandchild away, because the grandchild is too young. They are the legal guardians because their child is unable to care for the grandchild and the other parent is gone. Isn't that age discrimination?

There's also the "contract of adhesion" idea, a legal term for one side
holding all the cards.

btw, there's an organization specifically about clothesline
prohibitions.

IARU E-LETTER

January, 2010

In this issue: A Message From IARU President Tim Ellam
          Haiti Earthquake Report

A Message From Tim Ellam VE6SH/G4HUA,

Secretary Stafford requested that I provide an update on IARU activities for the IARU E-Letter. I am pleased to do so.

Some recent activities:

o   IARU Secretary Rod Stafford, W6ROD and IARU Coordinator for Emergency Communications, Hans Zimmermann, F5VKP/HB9AQS have attended meetings of the ITU Development Sector and are preparing for the World Telecommunications Development Conference to be held in Hyder&#257;b&#257;d, India in May.

o   IARU Vice President Ole Garpestad,LA2RR and I presented our credentials to ITU Secretary-General Hamadoun Tour�, HB9EHT. We were fortunate to have a lengthy discussion with Dr. Tour� where we outlined the goals for IARU within ITU. Dr. Tour� expressed his appreciation of the activities of the IARU and the Amateur Service in general.

o   Prepare for the upcoming ITU Plenipotentiary Conference to be held in Veracruz, Mexico in October. Items on the agenda for this important meeting include the election of ITU officials and the consideration of changes to the ITU Convention and Constitution that may impact the role of observers such as the IARU. Region 2 Secretary Ramon Santoyo V, XE1KK is working with the Mexican society, FMRE, to arrange an amateur station for this event.

o   Vice President Garpestad and I attended meetings of ITU-Working Party 5A. In particular, we took part in Working Group 1 headed, for the first time, by new Chairman Ken Pulfer VE3PU. This gave us a chance to meet in person with a number of the members of the WRC-12 team. Both Ole and I were very pleased with the efforts that are being made in Working Group 1 and Working Party 5.

o   At our recent meeting in Christchurch, the AC established a common position with respect to the WRC-12 agenda items that are of interest to the Amateur Services

- Amateur Radio Administrative Courses (ARACs) are in the process of being planned in both Laos and Oman for later this year.

- Developed a plan to have the IARU better represented before some Regional Telecommunication Organizations.

- Put in place a proposal to have more than one AC meeting a year with the additional meeting to be held on a "virtual" basis either through radio conferencing or teleconferencing.

- Communication amongst the AC members and the team preparing for WRC-12 has been assisted by the establishment of two email reflectors. This, I think, went a long way in enhancing our discussions during the AC meeting which was held in Christchurch, New Zealand last October

I am very pleased with the cooperative approach of the AC members and our WRC-12 team and I think it bodes well for our future activities.

When I was first elected to this position, I provided the AC members with my view of our goals for 2009-2014. It is my hope that we should strive to make the IARU the global voice of the Amateur Radio Services and the world's leading organization of Amateur Radio Member Societies. I believe we are well along in that process.

One of our other goals is to provide more effective communication to Regions and Member Societies. Hopefully we are improving in that respect through some of the mechanisms we now have in place, such as this E-Letter. We also wanted interact with our Member Societies more frequently than we have in the past. Ole, Rod and I have been able to do that in the past few months by our attendance at various Hamfests or in meeting with Societies directly. We both plan to have similar meetings throughout 2010.

Finally, I would like thank each of you for your continued support of the IARU and its activities. Our work together will continue to enhance the position of the Amateur Radio Services.

Please feel free to contact me or any member of the officer team if you have any questions or issues that you would like to raise. I can be reached by email at ve6sh@iaru.org.

==> Haiti Earthquake

(Note: The following account of the activities related to the response to the earthquake in Haiti that took place on January 12, 2010 is taken from the ARRL web site and provides information that is available as of January 14, 2010.)

On Tuesday, January 12 at 4:53 PM Haiti time (2153 UTC), a magnitude 7.0 earthquake hit 10 miles (15 kilometers) west of Port-au-Prince, the island nation's capital. Communications in and out of Haiti have been disrupted. The ARRL encourages US amateurs to be aware of the emergency operations on the following frequencies: 7.045 and 3.720 MHz (IARU Region 2 nets), 14.265, 7.265 and 3.977 MHz (SATERN nets), and 14.300 MHz (Intercontinental Assistance and Traffic Net); the International Radio Emergency Support Coalition (IRESC) is also active on EchoLink node 278173.

There was no firm estimate on how many people were killed by Tuesday's quake. Haitian President Rene Preval said the toll could be in the thousands: "Let's say that it's too early to give a number."

Tuesday's quake was felt in the Dominican Republic, which shares the island of Hispaniola with Haiti, and in Eastern Cuba, but no major damage was reported in either place. The January 13 edition of The Daily DX reported that the Rev John Henault, HH6JH, made contact late Wednesday morning with the Intercontinental Assistance and Traffic Net (IATN) on 14.300 MHz; this is the IARU Global Center of Activity frequency for emergency communications. He said that he was safe, but had no power and no phone service. He was operating on battery power and hoping to get a generator running later in the day. The edition also noted that Pierre Petry, HH2/HB9AMO -- who was in Cap Haitien (about 140 km north of Port-au-Prince) is safe; Petry is in Haiti working for the United Nations World Food Program.

On Wednesday afternoon, Fred Moore, W3ZU, assisted Jean-Robert Gaillard, HH2JR, with a phone patch to his friend Ariel in Miami. "It's bad, it literally is bad," Gaillard told Ariel. "We don't know how many people are dead. We do not know what to expect. It's chaos, I'm telling you -- it's real chaos. We are really in a disaster area. It's really a war zone. Many, many buildings in the downtown area are stripped from the ground with many people buried underneath them - you name it, it's bad." Gaillard, who lives in Port-au-Prince, was using his neighbor's generator to make the contact. "It's really chaotic. I've never been in a war, but this is what a war zone would be like. Dead bodies all over the place, dead bodies buried. All I can tell you is that I'm okay, my house is okay. We've had 30 aftershocks, the main one yesterday. We are expecting some more shocks, so I'm a bit nervous to be inside the house."

According to IARU Region 3 Disaster Communications Chairman Jim Linton, VK3PC, members of the Radio Club Dominicano (RCD) -- the Dominican Republic's IARU Member-Society -- and Union Dominicana de Radio Aficionados (UDRA) are preparing to go to Port au Prince on the morning of Friday, January 15, where they will install HI8RCD/HH, an emergency radio communications station and a mobile station.

FEMA (U.S. Federal Emergency Management Agency) Administrator Craig Fugate advised that US assets should not self-deploy to affected areas. "Initial reports from Haiti in the wake of yesterday's earthquake are concerning and troubling," he said. "During times like these, the emergency response community always stands ready to assist those in need. The United States Department of State has the lead for foreign disaster assistance, and US assets should deploy only if tasked to do so by the State Department. The most urgent need that the response community can fulfill at this time is supporting ongoing disaster relief fund-raising efforts."

On Thursday, January 14th, planes carrying teams from China and France, Spain and the United States landed at Port-au-Prince's airport with searchers and tons of water, food, medicine and other supplies -- with more promised from around the globe. US Secretary of State Hillary Rodham Clinton said that "tens of thousands, we fear, are dead" and said United States and the world must do everything possible to help Haiti surmount its "cycle of hope and despair." The US Army said a detachment of more than 100 soldiers from the 82nd Airborne Division was heading out from Fort Bragg in North Carolina, looking for locations to set up tents and other essentials in preparation for the arrival of another 800 personnel on Friday. That's in addition to some 2200 Marines to be sent, as the military prepares to help with security, search and rescue missions and the delivery of humanitarian supplies. More than a half-dozen US military ships also are expected to help, with the largest, the aircraft carrier USS Carl Vinson, arriving later Thursday.

Calls to emergency services weren't getting through because systems that connect different phone networks were still not working, said officials from a telecommunications provider in Haiti. The International Telecommunication Union (ITU) is deploying 40 satellite terminals and 60 units with broadband facility to re-establish basic communication links, along with experts to operate them. The ITU will also set up "a reliable, responsive and complete cellular system designed to enable vital wireless communications aimed at strengthening response and recovery mechanisms in a disaster zone," said ITU Emergency Communications Division Chief Cosmas Zavazava. The ITU has allocated a budget of more than $1 million US dollars to strengthen the disaster response effort in Haiti.

ITU Secretary-General Hamadoun Tour�, HB9EHT, expressed his solidarity with the people of Haiti and offered his condolences to the bereaved victims of the disaster. "The whole world is in shock following the devastation and untold misery caused by the earthquake in Haiti," Dr Tour� said. "ITU will do everything possible to provide assistance to the people of Haiti by re-establishing telecommunication links which will be vital in the rescue and rehabilitation efforts in the days ahead."

"The scope of the disaster clearly shows that the response to this is going to be a long term effort," said ARRL Media and Public Relations Manager Allen Pitts, W1AGP. "The ARRL has been in contact with communications leaders of the American Red Cross and Salvation

Army, as well as other key Amateur Radio operators throughout the region. As teams from the hundreds of responding agencies worldwide are formed for deployment, many will have Amateur Radio components. ARRL is committed to providing communications aid to our served agencies and working with the international community in this time of crisis. At this time there are no known requests from agencies for amateurs to travel to Haiti, but this can change. If it develops that there are ARES� assignments for a deployment in Haiti, these will be vetted and processed through each Section's Section Emergency Coordinators."

The situation in Haiti is still chaotic. More information will be posted on the ARRL web site (www.arrl.org) as soon as possible. Information is being validated and shared between many amateur groups and news sources as it unfolds.

If you have any information that would be appropriate to publish in this electronic newsletter, please contact me at w6rod@iaru.org.

Rod Stafford W6ROD
IARU Secretary

I just don't know, Jim. Perhaps I have a different idea of choice.

I'd rent before living in a HOA development.

> What I mean is that if your job is at X and your spouse's job is at Y
> and the decent schools are at Z, there's a practical limit on where you

And I suspect that they have a strong sense of "Right now!"

I waited until a combination of market prices, interest rates and
availability showed me the house I wanted.
There are some canards going around about houses. One is that you have
to have a house immediately and anything other than buying a house now
is throwing money away. That perception on many people's part's has
led them to making bad decisions.

I bought my house in 1994. Until that time, I lived in a mobile home.
We looked at houses the entire time, but saved money and waited until
the right house came along. It was a nice house that came on the
market during a mini-slump. It had sat for some months, so the sellers
were "motivated". We got the house at 75 percent of it's appraised
value, at a good interest rate, and it was in that neighborhood that
doesn't restrict antennas. Then we didn't refi except to reduce the
interest rate. It'll be paid off later this year. I live 2 miles from
work, and the kid walked to school until he went to high school.

I point his out because it's apparently quite different than what most
people think is the way to go about doing the house thing. Some may
say I got lucky. Luck had nothing to do with it. I just waited and

pounced when the time was right. Anyone can do that.

Now some people have issues with living in mobile homes, or fear that any money spent on anything other than a mortgage is wasted. They have to have a house, and they have to have it now. Okay, then they have to put up with the idea of buy in haste, repent at leisure.

> Some years back I considered moving, and looked at a number of homes in

> late.

That's putting yourself in a bad situation. Remember, the real estate agent is not your friend. After firing several agents, for reasons like continually showing me houses outside my price range, (that I determined, not them) and not disclosing HOA and other important stuff, I was pretty well convinced of that. They are the sellers friend, and the more they can get out of you, the better they serve their customer. If that means allowing the buyer to think that something is true while it isn't, they are happy to do that.

My point is that there are always options for a Ham, if people think they just have to take whatever comes along, well, they've taken an option that isn't Ham oriented.

While the idea seems practicable, I notice that article appeared in the April 1986 issue of 73 Magazine. So I have to ask, was it a joke?

The average non-technical person has no idea how microwaves, cell phones, door openers and car remotes work. I have mentioned to several people that these things use radio, and they were amazed. At highway construction projects where they are blasting, the signs say "Turn off all two-way radios and cell phones." because people don't realize that cellphones are radios.

My wife and I looked at over 100 houses before we selected the one I live in now. I have *no* HOA, *no* CC&R's, and *no* problem putting up antennas: I had to fire three agents who hadn't heard me when I told them what *my* requirements were.

Michael is right: the agent represents the *SELLER*, not the buyer. He is legally obligated to disclose _some_ things, but professionally obligated not to disclose anything else that might lower the house's value. Agents are not your friends.

I remember one occasion, when I was asked to put a deposit on a home I was considering: the agent looked at the paper, and said, "The deposit isn't five hundred, Bill, it's five thousand", and I replied, "You're right, it's not five hundred: it's Five dollars". He tried to stare me down, and then said "I don't think you're serious about buying this house, and I won't convey that offer", to which I replied "You'll convey the offer or I'll have your license on a plate"!

The agent had a counter-offer for me within two hours. You have to remember that these guys are salesmen, and they get paid to move the product: the moment you let them dictate to you, you lose.

HTH. FWIW. YMMV.

Bill, W1AC

I'd say it's in the "tongue in cheek" category. The final sentence says it: "My gratitude... to all of the above for contributing valuable jargon with which to obfuscate the subject."

The awning idea itself is quite practical... a lot of people have made very useful contacts by loading up rain gutters, aluminum window screens, bridges, and so forth. It's described in a not-quite-serious fashion (e.g. as a close-spaced array of curved radiators).

The idea of using an actual rabbit, as a "verted" rabbit-ear dipole, is certainly a joke. Actually attempting to transmit via a rabbit would result in severe QRM ("quispy roasted mammal").

All true.

There's also the fact that Amateur Radio emergency communication really is "When All Else Fails".

What I mean is that if I see a situation on the road which requires police, fire and/or ambulance help, I'll first try the cell phone, not the 2 meter autopatch.

If there's a hurricane, ice storm, etc., and email still works, most folks (including me) will use it. Etc.

Where Amateur Radio steps in is when those things don't work, or are inadequate.

Of course when Amateur Radio really is needed and doing the job, the hams involved aren't going to be making sure they get on camera.

> Broadcast stations are in a similar state. Their part is more likely

Filling in as the need arises and resources are available.

the reason is that people were sold on the idea that:

They aren't making any more real estate.

Square footage is cheap to build, and will appeal to the type of
customer you want looking at your house when you move up to the next
level. After all, you're paying 100K for ht eland, you have to put a
proper house on it.

Oh dear, oh dear, the market is going bonkers, you just have to figure
out how to buy this place before the price goes up again. But once you
buy or build it, the value will just keep going up.

Real estate never loses value, so if you overspend now, you can just
refinance in a couple years. Isn't that worth a couple years of a
tight budget?

That isn't opinion BTW, I heard them all.

<snippage>

And that's one of the things that I think ARRL does pretty well at.
It's an expensive game, but we gotta do it.

> And there's the media. More than one person has been allowed to have
> their flagpole or religious display because the media made an issue
> of it.

And Hams have to do a good job of working the media. we need to get the word out, and if we need to ply for sympathy or even get the public a little worked up for our plight, we gotta do it. And above all, we have to look the good part. We want avoid looking like the mad scientist - very hard for me, because I do get excited about this kind of thing. But I've been on TV and in the papers several times now with Ham radio activities, so they either like me or I've got entertainment value! 8^)

The discussion about emergencies and complex systems reminded me of Lister engines.

They're slow-speed diesel engines of very old design. Usually they are used as backup generators.

They've gathered a considerable following, as evidenced on websites like this one:

http://www.f1-rocketboy.com/lister.html

There's almost something steam-punky about them!

Some might wonder why anyone in his/her right mind would bother with such old technology, particularly when much smaller, lighter, newer generators are available.

One reason I can see is that in an emergency situation the big Lister can be fixed with minimal tools and parts. Another is that even a small one isn't going anywhere unless it's on a trailer. Still another is the ability to buy and fabricate parts - everything is so big.

The performance achieved is pretty impressive, once all the bugs areworked out.

What this has to do with Amateur Radio is:

1) In an emergency, old and simple has its advantages. This goes for radios as well as engines

2) No RFI!

3) The Lister isn't too fussy about fuel; I suspect one can run on diesel, heating oil, biodiesel, vegetable oil (in a warm climate) and maybe kerosene (in a cold climate.) Our radios should be as flexible.

4) The Lister is simple enough that a reasonably-knowledgeable non-professional can do whatever is needed to build and maintain a genset based on one. I think the same should be true of Amateur Radio rigs - maybe not all of them, but certainly at least some. While they may not be as fancy or "state of the art" as some, what matters is they work.

Amateur Radio Newsline(tm) Report 1695 - February 5, 2010

Amateur Radio Newsline report number 1695 with a release date of Friday, February 5th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T.   CQ Magazine files a rule making request to give hams more leeway under section 97.113 for rescue radio training, a Texas ham asks the FCC to create a United States 4 meter band and the National Conference of Volunteer Examination Coordinators again revises the recently revised Technician Class question pool. Find out more on Amateur Radio Newsline(tm) report number 1695 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: CQ MAGAZINE FILES RULES CHANGE REQUST ON 97.113

One of the nations leading ham radio publications is joining the movement to modify section 97.113 of the Amateur service rules. This, to permit hams in the employ of government or relief agencies to take part in disaster training drills. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the rest of the story:

--

To hear talk among some in the amateur radio community, the FCC's decision to offer an interpretation of this rule more than a year ago without the filing of a complaint or request for clarification still is puzzling and even troubling.

The commission legal counsel/enforcement officer, read a posting by on a bulletin board by a ham who helped his hospital put together and then participated in a disaster drill.

That ham got a communication from the FCC saying he was in violation of the provision of 97.113 regarding pecuniary interest and an employer benefiting from amateur radio.

The perception by some of this heavy-handed approach by the new FCC administration sent shockwaves among not only the amateur community but those it serves.

The result: Some organizations backed away altogether from using the services of amateur radio for fear they could come under FCC scrutiny.

Then, a clarification from the FCC that waivers could be granted.

What followed, a petition by a group of hams led by noted radio instructor Gordon West, WB6NOA, seeking to change the rule to allow hams to take part in disaster training exercises put on by their employers.

But CQ Magazine editor Rich Moseson, W2VU, says so much more is at stake and that's why he filed a more inclusive petition with the FCC.

"We realized in reading through all this that really this interpretation goes beyond disaster and emergency communication," Moseson explains. "A very strict reading of this rule means, for example, that I as an employee of CQ Communications, would not be able to do equipment reviews.

"Or, at least, not if involved transmitting. And, for decades, staff members of magazines have been doing equipment reviews. And, it's never been a problem. But if you read this closely, if I transmit for the purpose of doing an equipment review, then, I'm in violation of the rules."

But Moseson says the FCCs interpretation of this rule, goes even further, and could impact the Amateur Radio on the International Space Station Program.

"Everyone thinks it's (ARISS) a wonderful program," Moseson says. "It's good for NASA, it's good for ham radio, it's good for kids, it's good for the national interest in promoting young people's interest in science and technology by allowing them to communicate with astronauts on board the space station via amateur radio.

"No one questions the value of this program. But the astronauts are NASA employees and they are clearly communicating on behalf of their employer when they are operating in an ARISS contact."

And, Moseson says, even though they're making those contacts on their free time, if you look at the FCC interpretation, they, too, are in violation. So, Moseson says, it's time to act and he suspects the American Radio Relay League also will weigh in shortly.

"My understanding was that the ARRL board was going to consider at its meeting a couple of weeks ago, filing its own petition," Moseson says. "My guess is that the FCC will wait until the League files its petition and then group all three of them, or more if there have been others filed as well, into a single petition that is put out for initial public comment."

In the meantime, Moseson says the interpretation stands and waivers will have to be sought.

Moseson says it's clear this issue won't be decided quickly. In most cases, he says, it could take up to a year or more for the FCC to issue it's decision.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

You can read the entire story on the CQ petition to change section 97.113 of the Amateur service rules beginning on page 8 and continuing on page 114 of February 2010 issue of that magazine. Its also on-line at http://www.cq-amateur-radio.com/ZeroBiasFeb10.pdf (ARNewsline(tm))

RESTRUCTURING: PETITION FILED FOR CREATION OF U.S. 4 METER BAND

QRZ.com lead moderator Glen Zook, K9STH, of Richardson, Texas has filed a Petition for Rulemaking to the FCC. One aimed at creating a 70.000 MHz to 70.500 MHz amateur radio band in the United States. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

In his January 27th filing, Glen Zook, K9STH, notes that the 4 meter band spectrum has been authorized in a growing number of European and African nations. He says that by establishing such privileges for amateur radio operators in the United States and other areas over which the Commission has jurisdiction that it would be of great benefit to those operators residing in such areas.

According to Zook, the recent migration of broadcast television stations to primarily the UHF frequencies has basically eliminated any probable interference to television channels 4 or 5 which otherwise might have occurred. This is because the 4-meter band is located on frequencies that were allocated to television channel 4. Since the 4-meter amateur radio band does not fall in the 72.0 MHz to 76.0 MHz segment which is allocated to Operational Fixed and various mobile services there would be no potential co-channel or adjacent channel interference.

In his proposal Zook suggests that the FCC allow all classes of amateur radio operators operating privileges on this new band. However, he also suggests that Novice Class licensees be restricted to a lower output level than those allowed for Technician, General, Advanced and Extra Class licensees. He says that if the present maximum power output limitation of 1500 watts P-E-P is granted to the higher class licensees then the Novice

Class licensees should be restricted to no more than 200 watts power output as per most of the privileges granted those operators who hold a Novice Class license.

It should be noted that there are still a small number of low-band VHF television transmitters in operation and their owners will likely oppose the creation of a new ham band at 70 MHz. That said, the level of opposition from broadcasters will likely be far less than it would have been before the Digital Television transition of June 2009. Thats when most of the nations VHF low band stations on channels 2 through 7 migrated to channels in the U-H-F range.

If the FCC decides to issue it a Rule Making designation, Glen Zook's petition to create a ham radio allocation at 70 MHz is likely to garner a lot of support from within the ham radio community. Especially from those who operate in the world above 50 MHz.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

You can read the entire K9STH filing on-line at http://forums.qrz.com/showthread.php?t=234707 (QRZ.com, ARNewsline(tm))

RESCUE RADIO: FCC TEAM ASSESSES HAITI'S COMMUNICATIONS NEEDS - PRAISES HAM RADIO

An FCC led telecommunications assessment team is on-the-ground in Haiti evaluating the status of the country's communications infrastructure. This, following the devastating earthquake that struck that island nation on January 12th.

The communications experts were deployed in coordination with the United States Agency for International Development. They came in response to a request from the Director General of Haiti's Conatel which is the national telecommunications regulatory agency in that quake devastated nation

The FCC team was led by International Bureau Chief Mindel De La Torre. She and the others will continue to work with Conatel and local Haitian telecommunications providers to come up with practical options for restoring communications services to the people of Haiti.

Speaking from Port au Prince, De La Torre said that after seeing the destruction of the country, and particularly the telecommunications infrastructure, that she now has a much better understanding of the monumental task to keep communications up and running in such a difficult environment. She added that it is clear that the communications sector is making a huge difference on a day-to-day basis for Haitians struggling with tremendous personal and property losses.

Bureau Chief DeLaTorre has also taken note of the contributions to earthquake relief efforts of the words ham radio community. Writing in the FCC blog, DeLaTorre noted that in the aftermath of the earthquake, the amateur radio community in Haiti, the Dominican Republic and elsewhere has dedicated equipment and spectrum resources to the relief efforts. (FCC)

YHOTY: 2010 YOUNG HAM OF THE YEAR AWARD NOMINATING PERIOD NOW OPEN

The nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear and CQ Magazine combine to honor a ham radio operator age 18 or younger. This, for his or her contributions to ham radio or to society itself through ham radio.

It is expected that Vertex-Standard will once again fly the winner to Huntsville, Alabama, where the award will be formally presented. Hotel accommodations as well as convention tickets are normally provided. CQ Magazine says that it will again treat the recipient to a week at Spacecamp-Huntsville as it has done in years past.

Please note that if the recipient is unable to travel to the convention, Amateur Radio Newsline will attempt to arrange a special award ceremony where he or she resides. This might be at his or her school, in front of his or her Amateur Radio club. In this case the trip to the convention will be forfeited by the recipient, but all other aspects of the award will remain.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both mail in and electronic submission are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the words "here" to download the directions and the form. We look forward to hearing from you. RADIO LAW: CODIFYING THE VANITY CALL SIGN RULES

The FCC is in the process of making permanent the rules governing the Vanity call sign program. As regular listeners are aware, late last year, the FCC issued a Notice of Proposed Rule Making titled WT Docket 09-209 that seeks to amend the Commission's Amateur Radio Service rules. This, to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations.

Now, interested parties may make comments on this Notice of Proposed Rule Making via the Federal Rulemaking portal or the FCC's own website. Comments must be submitted by March 26, 2010 with reply comments are due no later than April 12, 2010. The U-R-L's to use are http://www.regulations.gov/search/Regs/home.html#home, or via the FCC's Web site at http://fjallfoss.fcc.gov/ecfs/.   (ARRL, FCC)

RADIO TESTING: NCVEC RELEASES REVISED ELEMENT 2 TECH QUESTION POOL

A revision to the new Element 2 Technician class ham radio testing question pool released this past January 4th. This, as the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators says that after further review that it found and corrected more than 50 minor typographical errors. Also that it clarified the questions and answers making them easier to understand.

These changes are now incorporated in a revised Element 2 question pool that contains some 400 questions. 35 are selected to make up any given Element 2 exam. And in a departure from past Element 2 question pools this one contains graphics and diagrams.

According to the NCVEC the errata list, as well as the revised Technician question pool, is available on the organizations website at www dot ncvec dot org. This new Element 2 question pool becomes effective for Technician class examinations administered on or after this coming July 1st and will remain valid until June 30, 2014. (NCVEC)

**

COMMUNICATIONS LAW: NEW GROUP FORMED TO FIGHT DISTRACTED DRIVING

A new group with government support is targeting all forms of distractions while driving. And while amateur radio is not yet in its gun-sights, hams will want to keep a close eye on this one as we hear from Frank Haas, KB4T, has the details:

--

The National Highway Traffic Safety Administration has teamed up with the National Safety Council for form a new organization to end distracted driving. This through the creation of a new organization called

FocusDriven which is the first nonprofit organization devoted to combating distracted driving and supporting victims of distracted drivers.

The National Highway Traffic Safety Administration defines distracted driving as any non-driving activity a person engages in that has the potential to distract him or her from the primary task of driving and increase the risk of crashing. It notes that there are three major types of driving distraction that incude visual, manual and cognitive. In simple terms this means any activity that causes a driver to take one's eyes off the road, ones hands off the steering wheel, or one's mind off of driving.

While distracted driving has always been a safety issue. Now, with the advent of mobile communication devices and other mobile technologies, it has become what the FocusDriven calls a growing epidemic. The group considers cell phone texting the most alarming of newer distractions, because it involves all three types of distraction. Other forms of distracted driving includes driving while using a cell phone, changing a radio station, eating and drinking, talking to passengers, grooming, using a CD or Mp3 player, watching a video or reading, or using a PDA or navigation system or other portable electronic devices.

So far, a ban against texting while driving has been enacted in 19 states plus Washington D.C. and Guam. Six states plus Washington D.C. and the Virgin Islands have banned the use of all hand-held devices for any reason while driving. Most but not all do have exclusions for users of two-way business communications and some have extended that exclusion to amateur radio.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

The new FocusDriven organization is said to be modeled after the organization Mothers Against Drunk Driving. More is on-line at www dot focusdriven dot org. (FocusDriven, various news reports)

**

RADIO LAW: DEPARTMENT OF TRANSPORTATION BANS TRUCKERS FROPM TEXTING

The Department of Transportation has announced an immediate ban on operators of trucks and buses on U.S. roadways text messaging will driving. Transportation Secretary Ray LaHood announced the ban on Tuesday, January 26th saying that this is an important safety step and we will be taking more of them to eliminate the threat of distracted driving.

Officials of the trucking and bus industries say they support the new ban on texting while driving buses and trucks. The president of the American Bus Association told the press that many bus companies already have similar policies in place. Drivers of interstate buses and large trucks who text while driving could face fines of up to $2,750.

Secretary LaHood has been campaigning against texting and cell phone use while driving for some time. He says enforcing restrictions on texting by long haul drivers will be difficult and he's calling on the wireless industry to work with public officials to come up with a solution. (Published reports)

**

RESCUE RADIO: PROPOSED EAS CHANGES COULD LEAD TO ANNUAL TESTS

Federal telecommunications officials are planning to hold the first nationwide test of the broadcast Emergency Alert System, but they have yet to set a specific date. And it will not happen until new regulations are in place.

FCC rules currently provide for voluntary testing at the state and the local level, but not nationally. The FCC has now issued a Second Further Notice of Proposed Rulemaking to change the rules governing the Emergency Alert System so as to conduct national testing at least once a year.

The FCC is also proposing requiring a more detailed form documentation from participating TV, radio and cable operations. The information would be due to the commission within 30 days after the test, and would be made available to the public. The agency is also asking for feedback on the equipment used to retransmit the EAS codes, which the agency says differs depending on the manufacturer. (FCC, Broadcast &Technology)

**

HAM HAPPENINGS: ARRL AUDIO NEWS TEMPORARILY SUSPENDED

The American Radio Relay League has temporarily suspend its ARRL Audio News operation. According to the League, the suspension was brought about by the planned introduction of the ARRL's new and redesigned website. It said that in order to do this properly, the League was suspending the ARRL Audio News operations while it looks for solutions that will enable it to provide the technical quality and distribution channels expected of that organization. The last newscast in the current ARRL Audio News series was issued on Thursday, January 28th. At our airtime the League has not set a date for the return of its audio news service. (ARRL)

**

HAMVENTION HAPPENINGS: 25TH ANNUAL DAYTON DX DINNER ON MAY 14TH

The SouthWest Ohio DX Association will sponsor the 25th annual DX Dinner at the 2010 Dayton Hamvention on Friday, May 14th at 6 p.m. Eastern time. The venue is the Crowne Plaza Hotel, in downtown Dayton. Program details and a list of the prizes will be available on the SouthWest Ohio DX Association website as soon as both are confirmed. You will find that along with information on reservations in cyberspace at www dot SWODXA dot org (SWODXA)

**

HAMVENTION HAPPENINGS: 2010 DAYTON CONTEST DINNER MAY 15TH

And the 18th Annual Dayton Contest Dinner is now slated for Saturday night, May 15th at 6:30 P.M. local time. The venue is the Van Cleve Ballroom also at the Crowne Plaza Hotel in downtown Dayton. Master of Ceremonies will be CQ Magazine Contest Editor John Dorr, K1AR. Along with Dorr will be CQ World-Wide Contest Director Bob Cox, K3EST, who will formally announce the 2010 CQ Contest Hall of Fame inductees. Tickets are available only on-line at www.contestdinner.com. (K3LR)

**

THE SOCIAL SCENE: THE VISALIA TOP BAND DINNER

And the famed Top Band Dinner at the 2010 Visalia DX Convention will be held Friday, April 16th, at the convention hotel. That's the Birth Room at the Visalia Holiday Inn in Visalia, California.

This years dinner speaker is Bruce Butler, W6OSP. He will present the program "The Low Bands from K4M, Midway."

Dinner is buffet style and costs $36. For reservations an email to WB6RSE at his QRZ.com address. And for those of you not aware, the term Top Band refers to 160 meter operation. (Via e-mail)

CHANGING OF THE GUARD: LOUISIANA'S MR. HAM RADIO FRIENDSHIP - MIKE KING, W5PY, S..K

Amateur Radio has lost a great friend and ambassador in the New Orleans and southeast Louisiana region. Mike King, W5PY lost his battle with cancer late Wednesday evening, January 27th. W5PY was a ham's ham. Mike served as ARRL Assistant Section Manager for the State of Louisiana since 2002 and was net Manager for the Louisiana Traffic Net. Passing traffic was a passion for W5PY. He was also past president and past vice president of the Ozone Amateur Radio Club in Slidell, LA. and was a regular net control for the club's weekly 2-meter net. Any visitor to club meetings was greeted

by
Mike at the door and introduced to everyone in the room. Mike also sent welcome letters to newly licensed hams. A friendlier guy you could never hope to meet. Even very late into his battle with cancer he could be found at the door of his church greeting worshipers as they filed in. An intensely private man, Mike never complained or hardly ever acknowledged his terminal illness.

As a naval aviator Captain King flew just about everything with wings. From fighters off of aircraft carriers to cargo planes and everything in between. Mike was awarded many medals and honors for his service in Southeast Asia, Grenada and Viet Nam. W5PY was stationed around the world and was assigned to the Vice Chief of Naval Operations Air Warfare in the Pentagon and Commander Naval Air Forces Atlantic Fleet at NAS Norfolk. After retiring from the military he flew for Braniff Airlines and retired as a 747 First Officer flying freight between Miami and South America. W5PY was an Eagle Scout and 32nd degree Mason. Sailing was a passion as well. He spent many hours sailing his Beneteau 321 on New Orleans' Lake Pontchartrain from his waterfront home in Slidell. He was a volunteer for the First Baptist Church of Slidell, the Red Cross, Life Songs Christian Radio and North Shore Regional Medical Center where he was very active during Hurricane Katrina, practically living at the hospital and spending countless hours at the hospital's ham station passing traffic.

Mike was a fixture at just about every hamfest or testing session in south Louisiana and Mississippi talking up the hobby, welcoming new hams and spreading the word about the Slidell, LA hamfest. I'll never forget the time he came up to me and introduced me to his girlfriend, who he called "Crayola". "Don," he said, "I want you to meet Crayola. I call her that because she's colorful. I love to surround myself with colorful people, Don. That's why I like you so much. You and Crayola are about the most colorful people I know and I wanted you guys to meet". That was Mike King, W5PY. He was a friend to ham radio and all he met. In the more than 10 years I knew him I never once heard him say anything negative about anything or anyone. He is survived by his mother, sister and brother Joel King, KM5CA, All of San Antonio, TX. He was interred at Port Hudson National Cemetery near Baton Rouge, LA. Mike King, W5PY was 62. (AE5DW)

**

THE CHANGING OF THE GUARD: RADCOM COLUMNIST NORMAN FITCH, G3FPK - S.K.

And from the United Kingdom comes word that Radio Communications Magazine VHF/UHF columnist Norman Fitch G3FPK, has also become a silent key. The Southgate news reports that Fitch was found dead at his home in Surrey England on Friday, January 29th.

Back in April of 1989 G3FPK took over the VHF/UHF duties from Ken Willis, G8VR, when it was part of the Spectrum Analysis feature of the magazine. The column then became VHF/UHF News and eventually, it became the VHF/UHF column of today.

Norman Fitch, G3FPK, is described as having been a keen operator on the VHF/UHF and Microwave bands and had been writing for over 20 years. His friends say that he will be greatly missed. (GB2RS)

**

HAM RADIO IN SPACE: NASA TO LAUNCH THREE NEW HAM RADIO CUBESATS

NASA plan to launch 3 CubeSats with amateur radio educational payloads late in November. The small research satellites will go into orbit for several universities as part of the agency's Educational Launch of Nanosatellite mission.

The satellites, called CubeSats because of their shape, come from Montana State University, the University of Colorado and Kentucky Space. Montana State designated its satellite as Explorer 1 Prime in honor of the scientific discoveries of the Explorer-1 mission. Colorado's satellite is named Hermes with a mission objective to improve CubeSat communications through the on-orbit testing.

But its Kentucky's bird called KySat-1 that is what the ham in the street is watching because it is believed to be the first CubeSat ever to carry a 2 meter to 70 cm FM transponder. Truly a crossband repeater in space and one that should be accessible by most hams within its flight path.

CubeSats are in a class of small research spacecraft called pico-satellites. They have a size of approximately four inches, a volume of about one quart and weigh no more than 2.2 pounds. The University of Florida was selected as an alternate in case one of the three primary spacecraft cannot fly. (ANS, Southgate, others)

**

WORLDBEAT: INCREASED VENUE COST CLOSES HAMFEST

Due to increased facility rental costs at the venue of the United Kingdom's Chesterfield Rally the planners have decided to cancel all future events. They add that they have been unable to secure another location with the same space and facilities in the region apologizes for any inconvenience to attendees and exhibitors who were looking forward to this year's hamfest. The group's website at www.chesterfieldrally.com is still online and a new website at www.m0oct.com will carry details of future activities. (G6IBQ)

**

WORLDBEAT: TOP BAND FOR SPANISH HAMS IN CONTESTS

At the request of the Spain's national ham radio society the Spanish Director General of Telecommunications has permitted the use of 160 meter

Top Band in certain contests. In all, some seven contest periods through the end of the year will permit Spanish hams the use of 1810 to 2000 kHz. A complete listing will soon be on-line at the society's website at www.ure.es (URE)

**

DX

In DX, word that EI6DX, will be active portable 6W from Senegal, in November. He will concentrate on the lower bands and CW. QSL via RX3RC, by the bureau or direct. Look for updates via the web at www dot ei6dx dot com.

The VP8 South Shetland Islands AO-51 operation by XR9JA will be active through February 28th. This affair was originally planned for January but had to be rescheduled. The operation is taking place at the Chilean Naval base on Greenwich Island. QSL via CE5JA, either direct or via the bureau.

7Q7HB is again heading to the warmer climate of Malawi for a period of 3 months or so. His activity will probably be on the Digital modes and on CW. QSL only direct to G0IAS with sufficient funds for return cards.

OH5SB operating maritime mobile will activate the wet squares at the Baltic on 2 meter SSB in summer 2010. His primary frequency on 2 meters will be 144.288 or 144.300. QSL direct to DL2SB.

DK1AX, will be active holiday style portable EA8 from Teneriffa in the Canary Islands through February 14th. Hes using only QRP CW on 15, 20, 30 and 40 meters with an Elecraft K1 at 5 watts to a Kelemen dipole primarily on the QRP frequencies. QSL only via the bureau to DK1AX or direct with a self addressed stamped envelope. His address can be found at QRZ.com.

Lastly, UA3DJY, is back in Dar Es Salaam, and is operating from the D-I-T Communications Club station, 5-I-3-A, until March 1st. He says that he will try to be active on all bands with emphasis on 40, 20 and 15 meter CW and 17 amd 15 meters SSB. QSL via RK3AOL.

(Above from various DX news sources)

**

THAT FINAL ITEM: YOU TOO CAN OWN A SPACE SHUTTLE

And finally this week, if you have ever dreamed of operating ham radio from the Space Shuttle, you may soon have your chance. That is if you have a lot of extra bucks and a place on the ground to set one up as your hamshack. Graham Kemp, VK4BB of the W-I-A News had the rest of the story from down-under:

--

NASA has slashed the price of its shuttles to just 20.3m Euro. Discovery is going to the Smithsonian National Air and Space Museum while Atlantis and the Endeavour are up for sale.

The delivery date is given as the second half of 2011 and shuttle main engines are said to be available for the cost of transportation and handling.

Now it can truly be said to watch this space.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of the WIA News in Brisbane, Australia.

--

One problem that might be a bit hard to deal with. If your neighbors think that your tower and beam or unsightly imagine the protests that planting the Atlantis and the Endeavour in your back 40 might create. (WIA News)

Actually, no. Some go away for while, then come back. One of them is
fond of playing two feeds simultaneously. I think the term is "racing
to the bottom". In any event, they are not available all the time.

The really interesting part (and this isn't regulations, but just a
funny contract quirk, is that when the local football team is playing,
most of them have the exact same signal.

> By brother, W3TDH, is fond of saying that "The government's job is to

> indue course.

I mostly agree, at least in principle.  My only problem is that some
times people will speak of deregulation when they actually mean a
```

shift of resources from one end to another. In the case of commercial radio, we've gone from one monopoly of control by the F.C.C. to just a couple of groups owning almost all the stations. So it's a monopoly of regulations, to a monopoly of something else. The quality of the product has deteriorated immensely. The question is that when a large group of stations fail, and after all who is going to listen to two feeds at the same time, how many will come back?

I don't usually comment on typos, Bill, but I was scratching my head for a while on this one. Carp? Fish?

I'm not the sharpest pencil in the box, and I just had to laugh at my first interpretation. I'm in need of a dope slap..... 8^)

I might argue that this entire thread is to some degree ignoring technical advances and economic realities.

Speaking strictly of broadcasting, when the industry got its start there were no PLL frequency control systems, locked to a precisely-controlled 10MHz oscillator.   There wasn't even crystal control. If you didn't have a skilled engineer, temperature changes and physical movement of the antenna would have your station running all over the dial. With no TV, MP3 players, or streaming media, if your station *did* drift on top of the Columbia station in the nearby city, half the audience would lose their nightly entertainment.

(I note with interest this page: http://jeff560.tripod.com/1923am.html . Note the large gap in the radio dial -- with no stations between 790 and 870, except for the dozens listed on "833" (actually a wavelength of 360m). These were a separate "class" of station - with looser technical requirements - and contemporary reports suggest they tended to drift among, and sometimes beyond, the 800-860 band, making it a bad idea to assign any other stations there!)

If you didn't have a skilled engineer, a valuable business might not be where its customers (or at least its audience) expected to find it --

and it could be interfering with the ability of its competitors to do business. Orderly business required strict regulation.

Today, an amateur can, in a few minutes, build a crystal-controlled oscillator that will stay on-channel with no attention whatsoever. Virtually all of our neighbors make daily use of portable UHF transmitters, in all temperatures and locations, without any concerns about off-frequency operation, and with no attention whatsoever. (usually they aren't even turned on/off)   And at the same time, with media players, cable TV, and the Internet, radio is simply no longer the critical lifeline it was in the 1930s. The most popular radio station in town could go off the air for hours and 90% of the population wouldn't even notice.

The risk of interference from an unattended transmitter has plummeted, and the economic consequences if it *does* cause interference have also plummeted.

To put it a bit differently, I might venture that the ESPN station Mike cited feels the losses they're taking by airing two programs simultaneously or losing spots are less than the cost of hiring a qualified engineer.

(you might, on the other hand, argue that if the station were willing to invest in ensuring a proper signal, their advertising revenue might increase by a factor greater than the cost of hiring the engineer. Their management may have decided operating without an engineer makes economic sense, but management isn't always right!)

=============

I would suggest the goal of amateur licensing has also changed over the years.

Just as with commercial broadcasting, in the early days the improper operation of an amateur transmitter could easily cause massive interference, even outside the amateur service. Much important traffic (especially international traffic) was handled by radio and fragile to interference. If amateurs were to exist, it would be critical that they know how to confine their transmissions to their own bands. Commercially-built transmitters were rare, and even when they did exist a skilled operator was necessary to keep them on-channel. Tough technical examinations were necessary to ensure against interference.

Today, it's darned near impossible to radiate a signal outside amateur spectrum unless you want to. I would suggest the FCC would probably be fine with lifting the requirement for licensing examinations altogether! - really, we're not likely to cause interference to anyone except ourselves.

The only reason we still have amateur licensing exams is because *we* want them.

=============

I would also suggest the licensing exam has not become *easier* over the years, only *different*. Maybe to put it a bit differently, we've gone from deeply testing a few areas of knowledge, to shallowly testing a wide variety of knowledge.

When we were shut down for WW2, we had one MF band, four HF bands, and two VHF bands.   We had three legal emission modes - CW, AM, and FM. Repeaters & satellites were unheardof, unless you were Arthur C. Clarke.

Today, we have one MF band, nine HF bands, and four commonly-used VHF/UHF bands.   If you count all "digital" modes as a single mode, I still count six emission modes in common use on HF.

There's a lot more to know about. If we still expected amateur applicants to be able to sketch the diagram of a transmitter or figure the proper biasing of a common-cathode amplifier or explain how to keep an oscillator from drifting, it would take days to write the exam and months to grade it.

That's true for the 1920s, when broadcasting was brand-new and there was little regulation controlling it.

But by the 1930s the technical and regulatory problems had all pretty much been solved from the standpoint of which station gets which frequency, transmitter standards, etc. Crystal control dates from the mid-1920s and by the mid- 1930s was pretty much required for broadcast and other fixed-frequency commercial transmitters. It was becoming common even among Depression-era amateurs.

That was true more than 60 years ago, too.

Yet the Licensed Operator lived on, because the need for them was well understood.

I think that depends on where you are and how you define the "most popular station". Certainly here in Philly, if KYW (all news/weather/traffic/sports) or WHYY (public radio) were to go silent for even a few minutes, there would be a lot of questions.

Of course a big market like the Delaware Valley has many stations on the air, so there are many choices. I suspect that even in the 1920s this was true, because AM BC listeners weren't limited to just the local station. Particularlyafter dark.

In fact, the performance of many of those early sets is quite remarkable when they're in good shape and connected to a good outdoor antenna, as was the usual practice back in the 1920s and 1930s.

All true, but that's not the only reason for operator licensing. By the end of WW2 if not earlier, amateur transmitters that were pretty foolproof were in common use.

> Tough
> technical examinations were necessary
> to ensure against interference.

But the examinations even in those days weren't really very "tough". They only covered the basics. Even before the Novice license was created in 1951, teenagers and younger were licensed amateurs in the USA. For example, W3OVV (now SK) earned her Class B license in 1948 at the age of nine years.

> Today, it's darned near impossible to
> radiate a signal outside amateur
> spectrum unless you want to.

I disagree! There are lots of ways to do it.

For one thing, amateurs are still allowed to use older equipment and build their own. So they need at least some basic understanding of how their rigs work.

Even the most modern sets can have some odd behaviors, such as transmitting out-of-band if the supply voltage is too low. (PLL loses lock). If a ham doesn't know to use heavy-enough wire to connect the rig to the power supply, all kinds of trouble could result, yet the rig receives perfectly.

>�I would suggest the FCC would probably be

I think not.

First off, they are still required by international regulations. Note that the CEPT folks recently changed their rules so that only Advanced and Extra US hams get full reciprocalprivileges.

Second, and more important, is the connection of licensing, control and responsibility.

Back in 1958, the FCC expanded the Citizens Radio Service to include 23 channels on 11 meters. They wrote specific rules to govern it, including the use of radio sets that were pretty much foolproof. No tuning, no tuneup, just select the channel, set volume and maybe squelch, push the button and talk. (Yes, some had tunable receivers but that was a cost-saving thing).

The "license" that was required entailed filling out a form and sending it in with the required fee. No exams of any kind.

At first 11 meter cb was pretty well behaved, but within a dozen years it was out of control. By the early 1970s, the rules had almost no effect on cb users. Superpower, failure to ID, deliberate interference, operation off of the allocated channels, RFI, use of radio to evade law enforcement and much more were common.

I was a ham back then, and I remember how common it was for a ham to be blamed for TVI/RFI caused by cb users with "linears" that weren't.

The problems continue to this day. Just listen to the low end of 10 meters when the band is even moderately open.

Why did cb change for the worse the way it did within a few years of its creation, yet Amateur Radio, which has been around a lot longer and had much less enforcement, stay so well behaved, avoid such a change?

I'd say that the differences in licensing requirements had a lot to do with it. So did the concept of the licensed, skilled operator.

> =============
>
> I would also suggest the licensing exam has not
> become *easier* over

> the years, only *different*.

I disagree, but the only way to really know would be to get hold of actual exams from the various times and compare them.

> Maybe to put it a bit
> differently, we've
> gone from deeply testing a few areas of knowledge,
> to shallowly testing
> a wide variety of knowledge.

That much I agree with!

But the test *methods* have also changed, and that makes a big difference.

For example, answering an essay question is a completely different thing from answering multiple-choice because with multiple choice you *know* the correct answer is there; you just have to determine which one it is. One cannot guess their way to a correct answer on an essay or show-your-work problem, but with a multiple-choice question that has 4 choices there's a 25% chance of a right answer even if the person knows nothing about the subject and chooses randomly. (The multiple-choice SATs avoid this by assigning negative points for wrong answers).

> When we were shut down for WW2, we had

> Repeaters & satellites were unheardof, unless you
> were Arthur C. Clarke.

It's a minor point, but the history was a little different. For accuracy, here's what I found from the literature of those days:

The US amateur bands in 1941 were 160, 80, 40, 20, 10, 5, 2-1/2 and 1-1/4 meters. Frequencies above 30 Mc. were referred to as "UHF" or "the ultra-highs" back then, and above 300 Mc. wasn't really regulated at all.

Amateurs back then were mostly using CW or AM, but a handful used SSB (considered a variant of AM), FM, and MCW. There were amateurs using duplex on 5 meters, and even a repeater or two. Model control was permitted as well, and had been used by hams since the 1930s.

While many if not most amateurs had only simple HF receivers and transmitters, a few had quite sophisticated stations, including things like VFO (then called "ECO"), remote control, double-conversion superhet receivers with crystal filters, rotary beam directional antennas, andmuch more.
>
> Today, we have one MF band, nine HF bands, and four

> commonly-used
> VHF/UHF bands. �If you count all "digital" modes
> as a single mode, I
> still count six emission modes in common use on HF.

Sure - but most of them were in use by hams 50 years ago:

CW and AM date from the beginnings of Amateur Radio - 1920s at thelatest.

SSB was used by a few hams in the 1930s and really took off after 1948

FM (called NBFM) was popular in the late 1940s as well, to the point that manufactured receivers and transmitters sometimes had optional NBFM adapters available.

SSTV was developed by hams in the late 1950s.

RTTY was authorized for US hams in the late 1940s and was reasonably popular considering the cost of the machines and additional equipment/supplies required back then.

There's a lot of ham gear from 40, 50, even 60 years ago that can be used on the air today and the ham on the other end of the QSO will not know you aren't using a "modern" rig unless you mention it. Even some 1930s equipment can be made to work so well that it is indistinguishable from current equipment.

The other night I had an interesting and fun QSO with a ham in North Carolina. He was using a Flex 5000 SDR; I was using a homebrew all-hollow-state transceiver of my own design and construction. The mode was CW, the band was 80 meters. Neither of us could tell thedifference.

That's a very good thing.

> There's a lot more to know about. �If we still expected

>

I don't see how that would be the case.

But it's a moot point. The FCC is extremely unlikely to change from the current test methods, if for no other reason than cost.

So the question is, given the test method of multiple choice exams, how do we tailor the question pools to do the best possible job? We hams have an element of control, because anyone can submit questions to the QPC for inclusion in the pools. And there's no upper limit to the pool size.

Of course a question that requires differential calculus to solve probably isn't going to be accepted. Nor is one that focuses on technologies not used much in Amateur Radio. But a lot can be added.

N2EY@AOL.COM wrote:

> 4) The Lister is simple enough that a reasonably-knowledgeable non-professional can do whatever is needed to build and maintain a genset based on one. I think the same should be true of Amateur Radio rigs - maybe not all of them, but certainly at least some. While they may not be as fancy or "state of the art" as some, what matters is they work.

There are presently a lot of radios that are relatively reliable even if fixing them might be beyond most hams. I've built Heathkits, simple cw transmitters and receivers and bluntly to fix most, I'ld need more test gear than is likely to be available on the spur of the moment. Yeah, I know how to use an antenna analyzer as a signal generator or as a relatively poor GDO, and I almost always have a 50 watt dummy load. I suspect that there presently isn't a ham equivalent of a Lister engine and unless somebody builds one, there won't be. Besides for ham radio, such rigs would need spare parts and some place to work on them. A spare radio would still be a better choice than one that can be fixed in five hours when time is of concern. Of course if you can find or design a kit that's functional, reliable and has easy to acquire spare parts, I'ld like to try building one.

One other point, making rigs simple often amounts to having to limit what frequencies are covered. It doesn't do much good to have let's say an 80M cw rig if contacts are more likely on 40M, or that's where people can hear you. The Icom MKIIG and Yaesu FT-857 are relatively small, relatively reliable, run on 12 volts and are relatively simple to operate. I have a TS50 for HF, but it's getting really long in the tooth, not sure I'ld want it as my sole rig in an emergency. For an emergency, I would prefer one of them especially if I had several. Switching power supplies are relatively tolerant of voltage variations produced by generators so they could be used to power such rigs assuming you have fuel available for a genset.

Finally, maybe we're both ignoring the possibility that the best approach would be complicated rigs that diagnosed their own problems and indicated which module to replace or repair. Given a collection of the modules most likely to fail, that would be the real ideal choice.

Take a look at

www.elecraft.com

particularly the K2 and K3 transceivers.

> Besides for ham radio, such rigs would need
> spare parts and some place to work on them.
> �A spare radio would still be a

Of course!

But the point is to be able to use what's available.

> Of course if you can find or design a kit
> that's functional,
> reliable and has easy to acquire
> spare parts, I'ld like to try building one.

See the above reference. Thousands of Elecraft rigs have been built and used, with a minimum of tools and test equipment.

Of course. But there's also the opposite extreme, where it is expected that one rig will do everything.

>�The Icom MKIIG and Yaesu FT-857

All good rigs but how reliable are they really? And how fixable?

One trend I see in Amateur Radio, which IMHO isn't a good one, is the idea that ham rigs are like consumer electronics, with a useful life of maybe a decade, and "no user-serviceable parts inside".

> For an emergency, I would prefer one of
> them especially if I had several.

Having several of anything is good planning in an emergency. But it's also expensive!

>�Switching power supplies are relatively
> tolerant of voltage variations produced by
> generators so they could be used
> to power such rigs assuming you have
> fuel available for a genset. �

IMHO a better option is rigs that can run from a variety of energy sources so that you aren't tied to a genset or auto electrical system.

> a collection of the modules most
> likely to fail, that would be the real ideal choice.

The problem is that the complexity required to do that can reduce the overall reliability...

I know the following is a blue-sky fantasy, but here's what I'd like to see.

In the world of PCs, there are lots of standards which have evolved over time and been adopted by many different manufacturers. The result is that you can assemble, upgrade or repair most PCs made in the past 15 years or so with just a screwdriver.

Wouldn't it be great if ham rigs were built the same way?

I think the same should be true of Amateur Radio rigs - maybe not all of them, but certainly at least some. While they may not be as fancy or "state of the art" as some, what matters is they work.
>
> There are presently a lot of radios that are relatively reliable even if fixing them might be beyond most hams. I've built Heathkits, simple cw transmitters and receivers and bluntly to fix most, I'ld need more test gear than is likely to be available on the spur of the moment. Yeah, I know how to use an antenna analyzer as a signal generator or as a relatively poor GDO, and I almost always have a 50 watt dummy load. I suspect that there presently isn't a ham equivalent of a Lister engine and unless somebody builds one, there won't be. Besides for ham radio, such rigs would need spare parts and some place to work on them. A spare radio would still be a better choice than one that can be fixed in five hours when time is of concern. Of course if you can find or design a kit that's functional, reliable and has easy to acquire spare parts, I'ld like to try building one.
>
> One other point, making rigs simple often amounts to having to limit what frequencies are covered. It doesn't do much good to have let's say an 80M cw rig if contacts are more likely on 40M, or that's where people can hear you. The Icom MKIIG and Yaesu FT-857 are relatively small, relatively reliable, run on 12 volts and are relatively simple to operate. I have a TS50 for HF, but it's getting really long in the tooth, not sure I'ld want it as my sole rig in an emergency. For an emergency, I would prefer one of them especially if I had several. Switching power supplies are relatively tolerant of voltage variations produced by generators so they could be used to power such rigs assuming you have fuel available for a genset.
>
> Finally, maybe we're both ignoring the possibility that the best approach would be complicated rigs that diagnosed their own problems and indicated which module to replace or repair. Given a collection of the modules most likely to fail, that would be the real ideal choice.

Ditto.

I've been licensed since 1958 and have gone through a boatload of rigs -- old, new, military surplus, homebrew, QRO, QRP.

I lived in Bay St. Louis, MS, when Hurricane Katrina took out the town. My FT-857 with the ATAS-120 antenna mounted on the back of my truck provided the only commo in and out for about 12 hours until National Guard arrived.

I'm not familiar with the ICOM or Kenwood equivalents but the FT-817 and -857 seem to me to be almost perfect emergency rigs: Cover 80-435, all modes; very complex rigs but can be set up for simple operation; reliable; very portable; low power requirements. In fact, with a battery and a solar charger, the FT-817 could operate indefinitely, as could any other similar rig with power throttled back to around 5 watts.

Not really. The community will reach a point where it looks like it is. The restrictions try to artificially modify the appearance. I have general dislike for real estate people. I've dealt with enough personally and professionally and have found very few who really get it. Rednecks will have dogs...and pickup trucks. Don't want to deal with those, buy elsewhere. But after moving in, don't force them to get rid of the trucks. (This one I speak from experience...7 long years of listening to these hounds...they finally moved out and that home now has a Mercedes and no dogs)

As far as preserving value, that should be fairly easy, if everyone involved is reasonable. It gets bad when you have the one idiot that wants to raise livestock on a 6000 sq ft lot. But the community can take care of that without restrictions. I keep my property nice, because I want to. I absolutely HATE a gun at my head regarding it. Its a Texas thing...

And adding to the general angst is where some individuals were conned into thinking the house is their pension plan. No, its a place to live, and don't expect a 25% gain every year, as the real estate agent told you it would.

I guess my, and others perspectives would be different if there were some areas built out without the absolute ban on antennas, specifically. But these people writing the restrictions seem to have a font of boilerplate that is bad.

And why is it recently that it has become so bad? To my view, homes built pre-1980 or so are easier on the restrictions. All of the "new" construction is where it is severe. And in an area like Austin Texas the construction has been intense over the past 15 years. (the saying goes...everytime they raise taxes in California a new subdivision is built here)

Take care.

I guess I'd argue that there's still a BIG technological split between what was required to keep a transmitter on-channel (and without spurs) even in the early 1950s vs. what's necessary today. I *know* I once inadvertently called CQ on 21.6MHz because of a mistake tuning a HW-16, that was in the early 1970s. That mistake would be impossible with today's amateur gear.

The licensed operator was necessary through the 1970s. Today, speaking strictly from the standpoint of avoiding ruinous interference to economically-important services, my argument is that that's no longer the case.

(there may be other reasons for maintaining the licensing requirement -- to prevent the amateur service from being hijacked into a different purpose, to ensure there's a "workbench" for experimentation with new circuits and /or means of transmission, etc...)

I stand somewhat corrected. The last Philadelphia Arbitrons on http://ww w.radio-info.com/site/markets/grid/philadelphia show WBEB-FM exceeded a 10% rating. It was however the only Philadelphia station to do so. KYW was a fairly distant second, (well below 10%) and WHYY got less than half KYW's numbers. (not that WHYY did badly -- they beat three high-powered commer cial FMs and Philadelphia's other 50,000-watt AM station, and if they didn't have to split the public radio audience with WRTI they'd have been in 5th place.)

But I'd stick to my guns to argue that if KYW went off the air, more than 90% of Philadelphians wouldn't immediately notice, and probably wouldn't notice for some time.

That's certainly a good reason for us to still want amateur licensing
exams!

But I would suggest the vast majority of the problems resulting from CB
were limited to CB spectrum or other spectrum of little economic
value.

Even much of the RFI was not the CBers' fault (even if they were
operating at illegally high power); often the cheap consumer gear
would have reacted the same way to a perfectly legal 28MHz licensed
amateur transmission.

Really I don't think it's *possible* to objectively prove whether the
exams are easier or not... have a group of people take both exams &
see how the pass rates compare? -- but most EE graduates today have no
idea how a vacuum tube works (and would find it impossible to pass the
1940 exam) while no EE graduate in 1940 had ever heard of a transistor.
(and would find it impossible to pass the 2010 exam)

though if you have four choices for each question, if you don't know
your stuff you're not going to be able to guess enough right to pass.
It's more about providing the proper selection of wrong answers!

You could argue that essay questions in part test the wrong skill -
your ability to cause someone else to understand the concept, not your
understanding of the concept itself.

I can certainly concur with this.

Let me make it clear, I'm not trying to argue that we shouldn't have
lice nse exams! I'm suggesting that *the FCC* doesn't really care if
we have exams -- *the amateur community* certainly feels we need them,
and I thin k the amateur community is right.

I think there are two keys to effective exams: - The largest possible
question pool.   Make it impossible to simply memor ize the
questions/answers. - Careful selection of the multiple-choice answers.
Provide wrong answer s that are close enough to the right answer that
applicants have to know the concept to find the right onw.

Even inadvertently.  In 2000, I bought an ICOM IC-746 HF/VHF
transceiver brand-new from one of the major ham radio stores.  One of
the options in the menu was to beep when you tuned to the edge of a
band.  I noticed that on some bands it did not beep at the edge.  For
example, on 75 meters, as I tuned upwards to and beyond the 4.0 MHz
band limit, the radio did not beep until I got to 4.5 MHz.  I connected
the rig to a dummy load, and sure enough I could transmit all the way
up to 4.5 MHz (well, actually 4.999 MHz).

I'm a Volunteer Examiner, accredited by ARRL/VEC, so I have some experience here. The current multiple-choice system is the most practicable for testing at many sites in the field. My VEC sends to me test question booklets with the required number (35 or 50) and distribution of questions taken from the pool. They supply us with templates to put over the answer sheets to grade the exams. Everything that we do regarding grading is specified to the nth degree. This is to protect us as well as to insure the integrety of the testing process. If we were to switch to essay questions, I, and I suspect most of my fellow VE's, would not feel competent to grade them. Grading of essay questions is necessarily subjective, not objective.

I do like the idea of negative points for wrong answers. But, that's not the program as we operate it. If we did deduct for wrong answers, we'd probably have to reduce the passing percentage of 74% (26 out of 35) to something lower, say 65%. And any changes in this would have to be approved by the FCC in Part 97.503.

But they could do more in the concepts of things like Fourier analysis and field theory, without having to work with big complicated equations. I have a Masters degree in Electrical Engineering, so in college I studied all kinds of complicated equations dealing with Fourier analysis and field theory (and had to derive some of them on closed-book tests). But after I graduated, I rarely had to apply those equations directly, just know the concepts and apply them. The basic concepts can be understood, at a qualitative level, by simple diagrams and hand-waving.

I agree with your assessment. The station was probably bought at a good price, and certainly the national advertisers don't know about the outages, or "doubleages". Local advertisement is appreciated, but probably more of a nuisance than an asset, because once again, they have to pay a person to take care of canvassing and deal with people. And employing a person costs money.

I think that the business model is to employ an absolute minimum of people, to get checks that are automatically distributed from HQ from the national advertisers, and to extract profits until it isn't profitable any more - When the tower falls from lack of maintenance, the station is finished. The people involved are not interested in Radio, per se, but in what they can extract from it, until they move on to another thing to generate cash. Its a very short term outlook these folks have. Get it, use it up, leave it.

<snippage>

> I would also suggest the licensing exam has not become *easier* over

I would agree here, Doug.

The closest I have ever been to old time tests is an old 1957 Ameco test guide for Novice and General. I was a little shocked to find that some of the questions were verbatim to today. Granted there are only so many ways to phrase some of them, but verbatim? Looking over the questions, the Novice was amazingly easy, and the General would have required me to spend an afternoon studying about tube circuits. No difficulty there, at least for my current knowledge level. So yeah, they weren't the questions on the official exam, but I can't help think the books were put out with a very good idea of what the questions would be.

So, I believe that the answers have been out there for a lot longer than F.C.C. question pools, Bash books and all the other examples of how things are easier today than they were "when I was a kid".

So what is the discrepancy? I think that we sometimes forget that we are always learning. There was a time when I would have had difficulties with the tests. Before I learned what I needed to know, they would have been hard stuff. I suspect that many of the folks who look at today's tests and scoff, remembering how they had to struggle when taking their version of the same class might just be showing how much they've learned in the intervening years.

> even in the early 1950s vs. what's necessary today.

That depends on the transmitter.

And unlike other services, amateurs are allowed and even encouraged todesign, build, repair and modify their own rigs. Any US-licensed amateur witha clean record is trusted by the FCC enough that no formal certification, type-acceptance, documentation, etc. is required to put a transmitter on the air. That applies to any rig an amateur might use, regardless of technology, age, band ormode.

Of course nowadays many if not most hams just buy "modern" manufactured plug-and-play equipment. Point is, we're not *required* to do so.

> I *know* I once

> inadvertentl y called CQ on 21.6MHz because of a mistake tuning a
> HW-16, that was in the early 1970s.

The mistake was probably not in tuning. What I suspect happened isthat you had a 40 meter Novice crystal plugged in, and tuned up on 15meters. The 40 meter Novice band back then was 7.150-7.200 MHz, so a crystalnear 7.200 would triple to about 21.6.

Such mistakes were common back-when. I suspect they are why so many Novice rigs had the crystal socket right up-front, rather than havinga switch and multiple sockets inside. Some hams would color-code their crystalsto avoid such problems.

No amount of skill in tuning nor technical know-how would prevent such a mistake unless the person knew to look at the crystal and multiplyby 3.

> That mistake would be impossible
> with today's amateur gear.

I disagree!

Yes, a rig with no tuneup controls cannot be mistuned, and you can'tleave the wrong crystal in a rig that doesn't use them. But even "modern" rigscan bemisused.

For example, many linear amplifiers still require manual tuneup, andmistakes that cause out-of-band spurs are possible. Not all "modern" rigs arelocked out of transmitting precisely at the US amateur band edges, and even thosewhich are can be (and sometimes are) modified to transmit out-of-band forMARS operation. No rig I know of enforces subbands-by-mode or subbands-by-licenseclass.

New rigs don't eliminate the possibility of operator error. The oldclassic mistake of wrong-crystal has been replaced by the modern classic of forgot-to-turn-off-the-split-button. Etc. Doesn't mean new hams areany dumber, just that while the details change the basic issues (operator know- how) remain.

Most of all, a US amateur license permits the use of older rigs - likethat HW-16. Which brings up a related issue:

More than a few newer hams I have encountered got into Amateur Radio *specifically* to use older rigs. Often the rigs they want to use are older than theyare. It's a retro thing, like old cars, vintage clothing, period furniture, etc. Some of us OTs have our hands full on the reflectors keeping them out of trouble. Forexample, more than a few don't realize that the power ratings on older rigs are*DC input*, not RF output.

> The licensed operator was necessary through the 1970s. Today, speaking
> strictly from the standpoint of avoiding ruinous interference to
> economically-important services, my argument is that that's no longer

> the case.

If we were all using certified, no-user-adjustment equipment that all ahd built-in protection against all sorts of troubles, maybe. But that's not Amateur Radio today, and hopefully never will be.

While HF may be "old-school" to some, consider that any class of US amateur except Novice has full priveleges above 30 MHz - includingthe operation of high power transmitters on frequencies close to public-safety services. So I think the need continues today.

> (there may be other reasons for maintaining the licensing requirement
> -- to prevent the amateur service from being hijacked into a different
> purpose, to ensure there's a "workbench" for experimentation with new
> circuits and /or means of transmission, etc...)

And just to maintain a semblance of order.

> I stand somewhat corrected. The last Philadelphia Arbitrons
> onhttp://www.radio-info.com/site/markets/grid/philadelphia show WBEB-FM
> exceeded a 10% rating. It was however the only Philadelphia station to
> do so. KYW was a fairly distant second, (well below 10%) and WHYY got
> less than half KYW's numbers.

KYW is a special case. Almost nobody listens to KYW continuously. What people do is to push the 1060 button for a specific purpose (trafficon the Schuylkill, weather, school closings, DJIA numbers, etc.) KYW's format is structured so that you know when to listen ("traffic on the twos")

That sort of programming is quite different from the kind of radio people listen to for considerable lengths of time, such as WHYY's "Fresh Air"

> (not that WHYY did badly -- they beat
> three high-powered commer cial FMs and Philadelphia's other 50,000-watt
> AM station, and if they didn't have to split the public radio audience
> with WRTI they'd have been in 5th place.)

WHYY also competes with public radio station WXPN. There's also WLEV to the north.

> But I'd stick to my guns to argue that if KYW went off the air, more
> than 90% of Philadelphians wouldn't immediately notice, and probably
> wouldn't notice for some time.

Middle of the night, maybe. Drive time - watch out!

I previously wrote:

>
> That's certainly a good reason for us to still want amateur licensing
> exams!

Agreed! But I've encountered folks who would like to see the
requirements for an amateur license reduced far below what they are
today. Somewould even remove the ability of some hams to homebrew and
use older rigs.

For an example, google "Amateur Radio In the 21st Century" and/or look
at the second NCVEC restructuring proposal. (I'll post links ifanybody
is interested).

> But I would suggest the vast majority of the problems resulting from CB

> operatin g at illegally high power); often the cheap consumer gear
> would have reacted the same way to a perfectly legal 28MHz licensed
> amateur transmission.

In my experience the cb linears were anything but, and were often the
direct cause. Low pass filter? What's that?

> Really I don't think it's *possible* to objectively prove whether the
> exa ms are easier or not... have a group of people take both exams &
> see how the pass rates compare? -- but most EE graduates today have no
> idea how a vac uum tube works (and would find it impossible to pass the
> 1940 exam) while no EE graduate in 1940 had ever heard of a transistor.
> (and would find it i mpossible to pass the 2010 exam)

Couple of points:

1) There's nothing on the exams, old or new, that's even close to
EElevel. All of the stuff required for all three current exams would
amount to maybe one EE level course. An introductory course at that.

2) Tube and transistor theory aren't showstoppers; the number
ofquestions related to them has always been rather small. IMHO there
were more ofthem in the past...

3) While a 1940 EE graduate would not understand what a transistorwas,
and many 2010 EE graduates wouldn't know what a tube is, if youshowed
them the devices and explained their characteristics, they'd be ableto
get right answers on all the amateur exam questions involving them in
very short order. If anything, the 2010 graduates would have more to
learnthan the 1940 ones!

4) It's not really about "easy" vs. 'hard" but about how much thelicensee winds up actually knowing. I think that it's quite possible for a newamateur to pass all the license exams yet be hampered by lack of basicknowledge about Amateur Radio to such an extent that they don't even get on theair, or are severely limited in what they do.

> > answers).
>
> though if you have four choices for each question, if you don't know
> your stuff you're not going to be able to guess enough right to pass.

True, but you don't need to get them all right. All you need is 75%. While random guessing won't get someone a license, it can help a person with big gaping holes in their knowledge pass.

> You could argue that essay questions in part test the wrong skill -
> your ability to cause someone else to understand the concept, not your
> understanding of the concept itself.

But how can a person be able to cause someone else to understand a concept they don't understand themselves? Particularly when the exact question isn't known beforehand?

The old exams weren't all essays, either; they included draw-a-diagram questions, show-your-work calculations, and multiple choice.

Historic trivia: About 1940 the FCC went to all-multiple-choice examsas a way of conserving resources at exam sites. Sometime during WW2 they went back to the old system, which continued until about 1960.

> Let me make it clear, I'm not trying to argue that we shouldn't have
> lice nse exams! I'm suggesting that *the FCC* doesn't really care if
> we have exams -- *the amateur community* certainly feels we need them,
> and I thin k the amateur community is right.

I don't know what FCC thinks on the subject. I do know that FCC has repeatedly refused all proposals to give free no-exam upgrades, and all proposals to eliminate the Extra class.

> I think there are two keys to effective exams: - The largest possible
> question pool. Make it impossible to simply memor ize the

> Provide wrong answer s that are close enough to the right answer that
> applicants have to know the concept to find the right onw.
>

No matter how big you make the pools, *somebody* will probably be able to memorize them well enough to pass without any understanding. But that doesn't really matter, because there comes a point where, if the pools are big enough, it's easier for most people to just learn theconcepts.

Careful selection of multiple-choice answers is a good idea, but hasto be done in such a way as to avoid other problems.

For example, consider the classic "how long is a 40 meter half-wavedipole made of #12 wire and cut for the middle of the band"?

Here's one set of answers:

1) 66 feet2) 132 feet3) 43 feet4) 18 feet

And here's another:

1) 66 feet2) 67 feet3) 68 feet4) 65 feet

Which one really tests understanding of the concepts?

The real kick for the modes was the sound card operations. What once took a good bit of space and effort, is now done with a computer and some software.

It never fails to amaze me when I think about my station laptop having so much ability. There seems to be about a bazillion digital modes now, and SSTV rtty and the other legacy modes.

In fact I'd say the biggest drawback is that to use the soundcard modes is simple enough that it can impede the appreciation of the power.

For instance, I used Ham Radio Deluxe and Digital Master 780 on my laptop.

Let's say I'm doing some PSK on 20 meters. I see a fellow operating Olivia mode a little up from me on the bandscope. I switch to his mode, and the software detects his callsign, I tell it I want to do a QSO with him, and the computer looks up and displays it in the "pre-log" window. Then it goes out to QRZ.com, and looks up the Op's information. We type out our QSO, and maybe do a little rag chewing. After we sign, my computer uploads the QSO info to eQSL.

All that time, I've been monitoring the DX clusters, have a grayline display and complete control of the rig from my laptop (I do have a second display because that is a lot of stuff for one screen!

That's easy to spoil a person that way.

Then again, sometimes it's fun to power up an old hollow state Heathkit.

> > There's a lot more to know about. If we still expected amateur applicants to be able to sketch the diagram of a transmitter or figure the proper biasing of a common-cathode amplifier or explain how to keep an oscillator from drifting, it would take days to write the exam and months to grade it.
>
> I don't see how that would be the case.

I just don't think there would be that much purpose to tube technology in a modern day test. That to me seems more of a thing that you learn as part of a niche you find to your liking.

> But it's a moot point. The FCC is extremely unlikely to change from the current test methods, if for no other reason than cost.

Multiple choice is pretty much accepted practice in most fields also.

> So the question is, given the test method of multiple choice exams, how do we tailor the question pools to do the best possible job? We hams have an element of control, because anyone can submit questions to the QPC for inclusion in the pools. And there's no upper limit to the pool size.

First you define what you want to do. There are many possibilities.

Some want to make things easier, some want to make things more difficult.

Much of this is coupled to how people see the tests in the first place. If we want to make them more difficult in order to serve as a sort of filtering mechanism, we can put in questions that involve a lot of calculations, then move the decimal points around or make them very close.

I'd never suggest this, but I took a test once that was incredibly ambiguous. One question was multiple choice "What temperature does solder melt at?"

But in the end, I like the idea of an easy starting point, then becoming more difficult as you move up. I think that in a historical context, we're doing what we have been doing for a long time now.

> Of course a question that requires differential calculus to solve probably isn't going to be accepted. Nor is one that focuses on technologies not used much in Amateur Radio. But a lot can be added.

I'm of the opinion that the tests are not far from where they should be. I wouldn't mind the Extra being more difficult, but that's because I had a lot of fun studying for mine.

Why not?

When the VEC system was created, they didn't start the question pools from scratch. They just took the existing exams and expanded the number of possible questions.

Some things haven't changed (40 meters in the USA has been 7.0 to 7.3 since 1929) so why rewrite the questions?

> Looking over the
> questions, the Novice was amazingly easy, and the General would have
> required me to spend an afternoon studying about tube circuits. No
> difficulty there, at least for my current knowledge level.

The Novice was intended to be amazingly easy.

Remember that in 1957 the Novice conveyed very limited privileges (small parts of 80, 40 and 15 CW, plus half of 2 meters, voice or CW. 75 watts input, crystal controlonly.)

More important, a 1957 Novice license was only good for a year, could not be renewed, and was a once-in-a-lifetime grant. Once a person's Novice expired, they could not get another one, and it was upgrade or leave ham radio.

The result was that most Novices were quite motivated...

> So yeah,
> they weren't the questions on the official exam, but I can't help
> think the books were put out with a very good idea of what the
> questions would be.

Of course. But there's a very big difference in having a study guide that indicates the general areas that will be on the test, and one that shows the exact questions and answers that will be used.

Remember too that in 1957 the FCC was still using essays, draw-a-diagram and show-your-work calculation questions on the exams for all license classes except Novice.

> So, I believe that the answers have been out there for a lot longer
> than F.C.C. question pools, Bash books and all the other examples of
> how things are easier today than they were "when I was a kid".

Sure. But there's a big difference between knowing the answers are outthere, and knowing exactly what the questions will be.

> So what is the discrepancy? I think that we sometimes forget that we

> much they've learned in the intervening years.

Yup. Or how little they knew back-when.....

I think another factor is the difficulty-of-access part. Some mayscoff at this, but it was a real issue in the bad old days.

What I mean is that, when FCC did the exams at FCC offices, just getting to an exam session could be more involved than the actualtest.

For those of us near big cities that had FCC offices, travel was no big deal, but for a hams further out it could be a serious journey. Particularly after FCC increased the "Conditional distance" from 75 to 175 miles in 1964 or 65. FCC exams were usually only given on weekday mornings, too.

If you failed an exam, you had to wait 30 days to retest.

No CSCEs; if a license required both code and written exams, you had to pass them all at the same test session. The General class ham trying to upgrade to Extra would have to pass 20 wpm receiving, 20 wpm sending, the Advanced written and the Extra written all at the same session.

There was also a time when FCC charged fees for the tests. Adjusted for inflation, the fees could be substantial. $9 in the 1960s equatesto about $50 today.

For a working people, such limits to access could mean taking a day off work and significant travel time and expense. For a kid in school, such as I was, it meant waiting for an exam day in the summer or on a school holiday that wasn't a federal holiday.

What all this added up to was a real incentive not to fail, because retesting was such a bother. So many hams would overlearn the material in order to be absolutely certain of passing on the first go. Very few would go to an exam session just to see if they could do it; the costs were too high.

What the old system also did was to make it very difficult for those who had various forms of "test anxiety" which often had nothing to do with their knowledge of the material and everything to do with the cost of getting to the exam session.

To many hams of those days, the exams probably seemed a lot "harder" than they really were, because of the pressure. I think it's a very good thing that the VE system has eliminated or reduced those problems.

At the same time, I think it's important to recognize the differences and how things have changed.

I'd feel competent to grade them. But that's not the issue.

> Grading
> of essay questions is necessarily subjective, not objective.

That's the issue.

With multiple choice, there's one right answer for each question and all the rest are wrong. No knowledge of the subject is needed to grade such a test.

> I do like the idea of negative points for wrong answers. But, that's

It would take a change of FCC rules, too.

> If we did deduct for wrong answers,

Why?

All that negative points do is to remove any possible gain fromguessing.

The way the multiple-choice questions (5 choices for each) on the SATs were graded (back in the ancient times when I took them) wasthis:

5 points for each right answer -1 point for each wrong answer 0 points for each answer left blank.

> And any changes in this would have to
> be approved by the FCC in Part 97.503.

Which would be the hardest part.

I'd settle for more in the concepts of Basic Radio.

Me too. Plus real-life tends to be open-book; you check to be sure.

> The basic
> concepts can be understood, at a qualitative level, by simple diagrams
> and hand-waving.

One of the things that ARRL publications do really well is to explain the concepts without tons of math and physics. Particularly the older Handbooks and the treasured "Understanding Amateur Radio" book. Simplified? Yes. Useful? Extremely!

OK, that's different.  I was envisioning subtracting the number of
wrong answers from the number of right answers.  If a wrong answer
counted a negative 1/5 of a right answer, then the passing threshold
could stay the same.

But then the VE's would have to do a bit more math.  Either multiply
the right answers by 5, or deal with fractions.

>> I have a Masters degree in Electrical Engineering, so in

In my college, the Math and Pysics departments used closed-book exams.
The EE department used open-book exams: the prof would say: "You can
bring with you to the exam anything except another sentient being."

The math is pretty simple.

Since the questions are all 4 choice, it would work like this:

For all exams, you get 4 points for a correct answer, -1 point for a wrong answer and 0 points for no answer.

Each exam would require a certain minimum number of points to pass. If my math is right, the 35 question exams would require 104 points to pass, 50 question exams would require 148 points to pass.

> In my college, the Math and Pysics departments used closed-book exams.

In my EE undergrad school, all the lower-level exams were closed book but as things progressed they became open book or test-free (based on homeworks and projects).

In EE grad school, tests became even less important and projects/ homeworks more important. One course series involved doing presentations in front of the class, with questions from both the prof and the other students.

Formulas were the least of it.

I forget if I told the story of Professor W. here, but sometimes the lessons weren't immediately apparent in those classes...

```

Join us at the ARRL Nebraska State Convention -- End of Winter Hamfest on March 20, 2010. Among the featured speakers are Bob Allison, WB1GCM, from ARRL HQ giving us a look at the ARRL Lab and how it works and the ARRL Midwest Division Director, Cliff Ahrens, K�CA, who will be bringing us up to date happenings at ARRL HQ and within the Division.

This looks like a great event. There will be lots of hams to talk with, lots of equipment to look at, and plenty of interesting presentations.

The Convention is being held at the Lancaster Event Center located at 84th and Havelock in Lincoln. For more information, please visit the hamfest website: http://www.lincolnhamfest.org. You can also download a flyer describing the event at
http://www.ctwsoft.com/hamfest/2010_LARC_Conv_Flyer.pdf.

I'll look forward to seeing you there!

73, Art K�AIZ

==> ON-THE-AIR : GET READY FOR THE ARRL DX CW CONTEST

The weekend of February 20-21 will be a busy one for CW operators as the 2010 ARRL DX CW Contest takes center stage. First started in 1929 as the ARRL International Relay Party, the ARRL DX CW contest lays claim to the longest running contest in Amateur Radio. Stations from all around the world -- from Australia to Zimbabwe -- should be active for this great event that takes place on 160-10 meters (contest QSOs are not permitted on 60, 30, 17 or 12 meters). Read more here <http://www.arrl.org/news/stories/2010/02/09/11334/?nc=1>.

==> ARRL FIELD DAY : 2010 FIELD DAY PACKETS NOW AVAILABLE

It's that time of year again -- time to start gearing up for ARRL Field Day, June 26-27, 2010! ARRL's flagship operating event -- always held the fourth full weekend in June -- brings together new and experienced hams for 24 hours of operating fun. Field Day packets are now available for download <http://www.arrl.org/contests/forms/fd-2010-packet.pdf> and include the complete rules (including changes for 2010), as well as other reference items such as forms, ARRL Section abbreviation list, entry submission instructions, a Frequently Asked Questions section, guidelines for getting bonus points, instructions for GOTA stations, a kit to publicize your event with the local press and more.

==> EYE ON AWARDS : THE IARU REGION 2 AWARD

In October 2009, IARU <http://www.iaru.org/> Region 2 <http://www.iaru-r2.org/wp-content/uploads/r2-award.pdf> announced a new award -- the IARU Region 2 Award <http://www.iaru-r2.org/wp-content/uploads/r2-award.pdf#pdf> -- available to amateurs and shortwave listeners who submit confirmed QSLs with 20 Region 2 countries or entities. To be considered for the award, contacts must have been made after April 16, 1964 -- the date when IARU Region 2 was founded. Read more here <http://www.arrl.org/news/stories/2010/02/11/11335/?nc=1>.

==> HINTS AND KINKS: UNISTRUT ANTENNA SUPPORT

This idea comes to us from Louis Kobet, WB3DZD, of Camas, Washington.

When considering a center support for the installation of an inverted V antenna I decided on the following requirements: a strong material, easy assembly, corrosion resistant and with tilt-over capability. The initial design was to use several 10-12 foot sections of antenna mast or 2 inch galvanized pipe coupled together. Due to the cost of antenna mast and galvanized pipe being more than anticipated, an alternative, 10 foot sections of 1-5/8 inch Unistrut channel was selected.

Figure 1: The PVC pipe and hoist pulley device mounted to the top of the Unistrut for hoisting the antenna.

Unistrut is a ham's Tinkertoy. It is available in 13/16, 1 1/4 and 1-5/8 inch widths, 10 and 20 foot lengths and in 12, 14 and 16 gauge sizes. It is made with dipped surface protective treatments from electro-deposition acrylic green to "hot dipped" galvanized coatings and multiple channel designs (including telescoping sections). A vast selection of brackets and fasteners is available and it is continuously slotted for easy guying. The design and choices for project use are limited only by the creativity of the user.

The tilt over base support consisted of a treated 4×4 inch landscape post anchored in concrete. (The wooden post was moisture sealed at the top using the dipped coating used for hand tools and along the length with several coats of wood sealer.) The Unistrut mast pivot point on the support base was a 3 inch lag bolt about 50 inches above ground. In retrospect, a section of Unistrut could have been set in the concrete as the antenna base support.

The Unistrut mast preparation consisted of black paint (except for areas where the sections were bolted together) and the addition of a hoisting pulley mounted at the end of a 2 foot PVC pipe (see Figure 1). One problem encountered was in bolting the Unistrut together. Bolting back-to-back against the base of the "U" was not possible because I couldn't get a socket on the bolt head inside the Unistrut channel. To get around this the Unistrut was bolted with the open "U" ends face to face. Square Unistrut channel would have eliminated this issue. The three Unistrut sections were bolted together with about a 12 inch overlap.

An antenna hoisting line was fed through the pulley and mast section carried to the base support for mounting. After attaching the mast to the pivot point it was tilted up into position, plumbed and secured in place with three additional lag bolts.

The V antenna was spread out, transmission cable attached and hoisted to the top of the mast. The ends of the V antenna were attached to a 12 foot landscape treated 4×4 that was secured to the property fence.

Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint in QST, you will receive $20. Send your hints via e-mail <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address.

==> LEGISLATIVE HAPPENINGS: MORE COSPONSORS ON BOARD FOR HR 2160

<http://www.arrl.org/news/stories/2009/05/12/10818> Last month, another Congressional Representative -- Jo Bonner (R-AL-1) -- pledged his support for HR 2160 <http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>, The Amateur Radio Emergency Communications Enhancement Act of 2009, bringing the total number of cosponsors to 34, including original sponsor Sheila Jackson-Lee <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1> (D-TX-18). HR 2160 is also sponsored by W. Todd Akin (R-MO-2), Michael Arcuri (D-NY-24), Roscoe Bartlett (R-MD-6), John Boozman (R-AR-3), Madeleine Bordallo (D-Guam), Andre Carson (D-IN-7), Geoff Davis (R-KY-4), Bob Filner (D-CA-51), Scott Garrett (R-NJ-5), Bart Gordon (D-TN-6), Brett Guthrie (R-KY-02), Maurice Hinchey (D-NY-22), Michael Honda (D-CA-15), Mary Jo Kilroy (D-OH-15), Tom Latham (R-IA-4), Zoe Lofgren (D-CA-16), Blaine Luetkemeyer (R-MO-9), Thaddeus McCotter (R-MI-11), Charlie Melancon (D-LA-3), Candice Miller (R-MI-10), Dennis Moore (D-KS-3), John Olver (D-MA-1), Bill Posey (R-FL-15), Dana Rohrabacher (R-CA-46),

Bennie Thompson (D-MS-2), Michael Turner (R-OH-3), Peter Welch (D-VT), David Wu (D-OR-1), C.W. Bill Young (R-FL-10) and Don Young (R-AK). Click here <http://www.arrl.org/news/stories/2009/05/12/10818> for information on how to encourage your Congressional Representative to sponsor HR 2160.

==> PIO NEWS : THE FEBRUARY ISSUE OF CONTACT! NOW ONLINE

<http://www.arrl.org/pio/contact/>   The ARRL is committed to public relations and has built a national PR program designed to represent Amateur Radio to government, the media and the public. The Newington Headquarters' national effort is supported -- and greatly enhanced -- by ARRL public information appointees and other interested volunteers who work to promote Amateur Radio on the local level. One of the tools to help these volunteers is CONTACT <http://www.arrl.org/pio/contact/2010/02/>, the monthly online newsletter designed to be a resource for ARRL Public Information Coordinators (PIC <http://www.arrl.org/FandES/field/org/pic.html>), Public Information Officers (PIO <http://www.arrl.org/FandES/field/org/pio.html>) and anyone with an interest in Amateur Radio public or media relations activities. Each issue contains helpful articles and tips to help spread the good word about Amateur Radio.

The February issue of CONTACT was released earlier this week and is full of information that you can use. With Field Day approaching, how are you going to publicize your club's participation in the largest operating event in the world? Find out what some hams will be doing combine Field Day with other events happening in their communities. Speaking of Field Day, find out how your club can earn 500 bonus points. Learn how a club in New Zealand got people who had no electronics experience excited about Amateur Radio. There's more information in the February issue of CONTACT. You can read it -- as well as other materials prepared specifically to promote Amateur Radio -- on the PIO Web page <http://www.arrl.org/pio/>.

==> NEW ARRL WEB SITE COMING SOON

After more than two years of planning, designing and writing, we here at the ARRL are eagerly anticipating the launch of the new ARRL Web site. We've been able to make the online experience easier for our members -- from the online store, to registering for a class, to finding a club -- plus we've created a new, enhanced member profile with many more options available. We've made improvements with you in mind, making sure that we've created the easiest, most enjoyable online experience possible. The new Web site will be available at the end of February.

==> ITU NEWS: ITU DIGITIZES HISTORICAL ARCHIVES

The International Telecommunication Union (ITU <http://www.itu.int/>) announced <http://www.itu.int/newsroom/press_releases/2010/CM02.html> on February

11 that they have launched the History of ITU portal <http://www.itu.int/history>. This program -- the digitizing of the ITU's archive of historical documents -- aims to improve access to information on the ITU and chart its evolution since its establishment in 1865, while ensuring the long-term preservation of historic documents. The archives will be freely accessible. ITU's Historical Documents Digitization Program is an ongoing project to catalogue and scan key ITU documents and outcomes of major conferences and make them available on the web. Optical character recognition (OCR <http://en.wikipedia.org/wiki/Optical_character_recognition>) allows the documents to be fully searchable. Documents generated from ITU Plenipotentiary Conferences -- as well as from early radio, telegraph and telephone conferences -- are now available on the portal. The portal provides background information, key data and links to the documents and other materials for each conference. The digitization program will continue to make available documents of historic significance, including those related to Radiocommunication Conferences since 1903.

==> SILENT KEY: HERBERT "PETE" HOOVER III, W6ZH (SK)

Herbert "Pete" Hoover III, W6ZH (ex-W6APW) -- the grandson of Herbert Hoover, the 31st President of the United States, and the son of former IARU and ARRL President Herbert Hoover Jr, W6ZH (SK) -- passed away <http://www.legacy.com/obituaries/latimes/obituary.aspx?n=herbert-hoover-pete&pid=139549574> February 4, 2010. He was 82. A resident of San Marino, California, Hoover was active in ARRL activities, serving as a Director of the ARRL Foundation <http://www.arrlf.org/> in 1976 and as a member of the ARRL Long Range Planning Committee from 1978-1981. In the 1970s, Hoover, along with EIMAC's Bill Eitel, W6UF (SK), established a matching fund to encourage contributions to the amateur satellite program. Hoover served as Vice President and Trustee of the Pasadena (California) Radio Club and was also a member and former President of the Southern California DX Club. In 1978, he was elected to the National Red Cross (later the American Red Cross) Board of Governors. A memorial service is being planned. Donations may be made to Doheney Eye Institute, 1490 San Pablo St, Los Angeles, CA 90033; Hoover Institution, 434 Galvez Mall, Stanford University, Stanford, CA 94305-6010; Herbert Hoover Presidential Library Association, 302 Parkside Dr, West Branch, IA 52358 or the House Ear Institute, 2100 W 3rd St, Los Angeles, CA 90057.

==> SILENT KEY: CHRIS WALTERS, N0HVK, KILLED IN CONNECTICUT EXPLOSION

Chris Walters, N0HVK, of Florissant, Missouri, was killed in an explosion <http://www.nbcconnecticut.com/news/Widow-Mourns-Husband-Killed-in-Plant-Blast-83855942.html> on Sunday, February 7. He was 48. Walters -- who was employed as a safety manager for an electrical subcontractor at the Kleen Energy Plant in Middletown, Connecticut -- was one of five men killed in the explosion; at least a dozen were injured. The accident received national news coverage. According to officials, the plant was in the process of doing a "blow down" -- clearing the natural gas lines -- when the explosion occurred, but investigators are still determining the cause of the explosion. According to his wife, Fran, Walters was unemployed in Missouri and had been in Connecticut for two months working a temporary job. While in Connecticut, Walters found time to enjoy Amateur Radio activities. He was a member of the Shore Point Amateur Radio Club (SPARC <http://sparc.us/sparc.htm>), volunteering for community events and fundraisers with the club; he was also part of SPARC's first ARRL Field Day. Connecticut Governor M. Jodi Rell requested that flags fly at half-staff on February 10 in honor and memory of the five men who perished in the explosion. -- Some information provided by WVIT and SPARC

==> SOLAR UPDATE

Tad "Light breaks where no Sun shines <http://www.poemhunter.com/poem/light-breaks-where-no-sun-shines/>" Cook, K7RA, reports: The increasing sunspot activity continues, and images from NASA's STEREO mission <http://stereo.gsfc.nasa.gov/> show a string of active regions in the Sun's northern hemisphere -- both visible and over the horizon on the far side. The high sunspot number for the week was 71 on February 8; the average for the week was 43.3. We haven't reported a weekly average that high since the week of March 27-April 4 in 2008 when it was 43.6. The daily sunspot number hasn't been as high as 71 since May 28, 2006 when it was 78. The earlier reading that reached that level or more was 105 on April 6, 2006. On February 8 -- when the daily sunspot number was 71 -- the total area covered by sunspot activity was 460 millionths of a solar hemisphere. That number hasn't been as high since the same earlier week in 2008 that had a high sunspot number average. The dates were March 26-27 when the area of sunspots was 520 and 510. Look for more information on the ARRL Web site on Friday, February 12. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by Dylan Thomas' Light Breaks Where No Sun Shines <http://www.poemhunter.com/poem/light-breaks-where-no-sun-shines/>.

==> THIS WEEK ON THE RADIO

This week, the NCCC Sprint Ladder is February 12. The YLRL YL-OM Contest is February 12-14 and the FISTS Winter Sprint is February 13. On February 13-14, be sure to check out the CQWW RTTY WPX Contest, the KCJ Topband Contest, the Louisiana QSO Party and the OMISS QSO Party. The North American Sprint (SSB) and the SKCC Weekend Sprint are both February 14. The Classic Exchange (Phone) is February 15 and the AGCW Semi-Automatic Key Evening is February 17. Next week, the ARRL International DX Contest (CW) <http://www.arrl.org/contests/rules/2010/intldx.html> is February 20-21. There is another NCCC Sprint Ladder on February 19. The Feld Hell Sprint is February 20, the Run for the Bacon QRP Contest is February 22 and the SKCC Sprint is February 24. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, February 21, 2010, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, March 5, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1696 - February 12, 2010

Please note that this is an extended amateur radio Newsline report with three breaks and a total running time of 34 minutes. Newscast begins rightnow.

**

Amateur Radio Newsline report number 1696 with a release date of Friday, February 12th, 2010 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio relief communications continue in Haiti, a UK publisher gives financial support to the RSGB's fight against BPL, a major sunspot appears on the surface of the solar disc, a radio prank brings a $16,000 fine and a teen finds a way to send radio waves through solid rock.   Find out the details on Amateur Radio Newsline(tm) report number 1696 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIOS ROLL EXPANDING IN HAITI

Amateur radio's effort to assist in earthquake ravaged Haiti continues to expand. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

The role being played by radio amateurs in post quake relief efforts is far from over. This with word through the ARRL that Doug Lapin, K1OY, and the Dominican Radio Club's team were to returned there earlier this past week to install another repeater which will serve as a major upgrade to the system.

There are two fixed sites at the Dominican Embassy and the UN Logistics Base. The system is used primarily by the Dominican Red Cross. Lapin and the Dominican group were to be in Haiti for two days and hoped come back the following week to upgrade the power plant.

Lapin says that he attended a recent United Nations weekly status meeting where was deluged with requests by the UN and others to use the network. He notes that there are still severe communications problems in Haiti, especially as more aid organizations get organized.

Meantime, Julio Ripoll, WD4R, reports that the University of Miami Hospital's Amateur Radio teams have been very busy passing messages between
Florida the hospital ship Comfort and around the airport in Haiti. He notes that the University of Miami Hospital's hams have also been put to work repairing radio and medical equipment for other relief groups.

Ripoll says that landline communications are still down and that cell phone service is "only about 80%. And says Ripoll, the latter is only in the immediate area of Haiti's main airport.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

With Haiti's communications infrastructure still in a state of disarray, it appears that ham radio will play an important role in rescue radio efforts for months to come. (ARRL)

**

RESCUE RADIO: MARS UNITS TO SHARE HAITI RESPONSIIBILITY

Meantime, to assist the MARS communications support effort in earthquake relief to Haiti, the heads of Army, Air Force, and Navy-Marine Corps MARS have agreed to divvy up responsibilities among the three MARS programs. In a report carried by the ARRL, Air Force MARS Public Information Officer David Trachtenberg, N4WWL, said that the delegation of responsibility will facilitate more efficient utilization of MARS communications assets in the overall relief operation. The January 12th earthquake wiped out the island nation's communications infrastructure. (MARS Release)

**

RESCUE RADIO: A LIST OF NATIVE HAITIAN HAMS

A partial list of hams believed to have been active from Haiti prior to the January earthquake has surfaced. Amateur Radio Newsline's Don Wilbanks, AE5DW, has the calls to listen for:

--

According to a posting from KC8VWM, the following stations represent "known" Haitian nationals who are hams who have been operating stations in Haiti in the past year or so. They are HH2AW, HH2DMJ, HH2DZ, HH2GM. HH2FJM, HH2JR, HH5HK, HH3AR, HH6JH, HH2B and HH2LX.

There may be others but if there are they have not been heard on the air in a long time. Charles adds that some of these call signs may have expired and some hams may have relocated to other countries. Also, latest reports indicate none of these stations listed in Haiti have been contacted.

I'm Don Wilbanks, AE5DW, near New Orleans.

--

At airtime nothing more is known about the health and welfare of anyone on this list. (KC8VWM via Internet)

**

RESCUE RADIO: ETOW TO SEND WIND UP RADIOS TO HAITI

In other Haiti earthquake relief news, some free radios are on their way to Haiti to help the general public know more about humanitarian efforts coming their way. Jim Damron, N8TMW, has the details:

--

The humanitarian organization Ears to our World has launched an initiative to distribute a substantial number of Eton Corporation-donated radios to individuals in remote and impoverished areas of that nation. These are wind-up generator powered radios which also have a built-in flashlight.

The group believes that the radios could provide life-saving medical and food/water supply information to families and communities.

The organization is currently raising funds to help pay the expedited shipping costs and perhaps allocate even more radios for a future shipment.

I'm Jim Damron, N8TMW.

--

The initial shipment of over 100 of these self-powered radios was to be sent to Haiti this last week. (Southgate)

**

THE BPL WAR: UK PUBLISHER DONATES TO RSGB ANTI BPL FIGHT

PW Publishing, the company that owns United Kingdom magazines Practical Wireless and RadioUser, has joined the BPL fight. This as it becomes the first corporate donor to the Radio Society of Great Britain's Spectrum Defense Fund. The company has also generously given the RSGB advertising space throughout the year to highlight the problems of Broadband over Power Line interference. (GB2RS)

**

PROPAGATION: A BIG SUNSPOT AT LAST

A possible turning point in the High Frequency propagation doldrums. This as Spaceweather dot com reports the sudden emergence of sunspot 1045 which in turn has caused a sharp increase in solar activity.

The active region appeared on Saturday, February 6th. By mid-week it had produced three M-class and almost a dozen C-class solar flares. The strongest blast, an M6-class eruption on February 7th, may have hurled a coronal mass ejection toward Earth.

Whether or not sunspot 1045 is a precursor to ongoing improved solar activity or just a one-time occurrence remains to be seen. Sample sounds and images may be found at spaceweather.com. (Spaceweather)

RADIO HONORS: ARRL ANNOUNCES LEONARD AWARD WINNERS

Three people have been named as recipients of the ARRL's 2009 Bill Leonard W2SKE, Professional Media Award. First up in the audio category is radio host Ted Randall, WB8PUM of the weekly QSO Radio Show. The ARRL Board of Directors recognized that Randall's show has become even more effective as a podcast of consistently high quality in its treatment of issues within amateur radio week after week. Ted was the recipient of this award in 2008, as well.

In the area of video the award was given to reporter Kim Byrnes of Kansas City television station WDAF. She covered the Raytown Amateur Radio Club's 2009 Field Day operation for her station's Sunday morning news magazine. Byrnes also provided reports on the diverse aspects of amateur radio, specifically highlighting ham radio as a hobby, as an emergency communications service, and as a radiosport. She also chronicled the evolution of two-way radio technology with what the Board called a fascinating video report.

Lastly, the print journalism award was given to Vicky Taylor who is a reporter for the Chambersburg, Pennsylvania, newspaper Public Opinion. She was honored for her coverage of the licensing of 8 year old Victoria Latham, KB3SSM, and her 7 year old sister Veronica, KB3SSN. This was the heartwarming story of how these two pre-teens convinced their dad Shannon, W3SML, and mom Rachel, KB3RNP, that they were ready to get their ham tickets. (ARRL)

ENFORCEMENT: RADIO PRANK LEADS TO $16000 FINE

A New York radio station that played what has been described as a distasteful radio prank on a listener has been issued a proposed fine of $16,000 by the FCC. But it's not what was said that got the station in trouble, but the way it tried to circumvent the FCC rules that say a person being recorded during a call must be advised before the station rolls tape. Amateur Radio Newsline's Bruce Tennant, K6PZW picks up the story from here:

--

In its Notice of Apparent Liability for Forfeiture against WSKQ Licensing, Inc. the regulatory agency says it is proposing to assess this $16,000 fine because of WSKQ's apparent willful and repeated violation of Section 73.1206 of the Commission's Rules. This by broadcasting a telephone conversation without giving prior notice to the individual being called of its intention to do so.

On August 23, 2007 the FCC's Enforcement Bureau received a complaint alleging that a station employee made a call to a woman claiming to be an employee of a local hospital. The caller told the recipient of the call that her husband had been seriously injured in a motorcycle accident and that he died at the hospital. The complaint also alleged that the call recipient became distraught when she received this information. Thereafter, the Station employee informed her that the call was a nothing more than a joke.

Based on the complaint the FCC issued a letter of inquiry to WSKQ Licensing on September 25, 2008. In its response WSKQ Licensing stated that its parent company, Spanish Broadcasting System, Inc., contracted with a vendor, Rubin Ithier, who recorded the call for a prank call feature show. It admitted that Ithier initiated the call broadcast by the station. It went on to claim that the call was made at the call recipient's husband's request, and that Ithier performed the prank.

WSKQ Licensing did admit that Rubin Ithier did not inform the call recipient that the call was being recorded for later broadcast until after the call had been recorded and played over the air. The licensee provided a transcript of the program, the content of which confirmed that the call recipient was not given notice prior to the call being recorded that it was being recorded for future broadcast. The licensee also admitted that the Station broadcast the call twice on August 23, 2007.

WSKQ Licensing also included a recording and transcript of the broadcast. We have read it and find it far to distasteful to repeat. I does however indicate that the prank call recipient hung up the phone when she learned that the call was a prank. Also that Rubin Ithier telephoned her again to obtain her permission to broadcast the call.

In its February 4th decision to issue the proposed fine the FCC did not touch on the content of the prank call. Rather its concern was the fact that the call was recorded and replayed without the consent of the recipient. As such, the FCC says that based on the preponderance of the evidence, that the person who made the prank call willfully or repeatedly violated the Communications Act or a Commission rule. As such the FCC concluded under the procedure that WSKQ Licensing used in producing this broadcast that it is apparently liable for the willful and repeated violation of Section 73.1206 and liable for a $16,000 fine.

For the Amateur Radio Newsline, I'm Bruce TennantK K6PZW, in Los Angeles.

--

As is customary, the FCC has given the station's owners 30 days to pay the $16,000 fine or file an appeal. (FCC)

**

RADIO LAW: CODIFYING THE VANITY CALL SIGN RULES

The FCC is in the process of making permanent the rules governing the Vanity call sign program. As regular listeners are aware, late last year, the FCC issued a Notice of Proposed Rule Making titled WT Docket 09-209 that seeks to amend the Commission's Amateur Radio Service rules. This, to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations.

Now, interested parties may make comments on this Notice of Proposed Rule Making via the Federal eRulemaking portal or the FCC's own website. Comments must be submitted by March 26, 2010 with reply comments due no later than April 12, 2010. The URL's to use are http://www.regulations.gov/search/Regs/home.html#home, or via the FCC's Web site at http://fjallfoss.fcc.gov/ecfs/. (ARRL, FCC)

**

RADIO LAW: FCC CLOSES CABLE SYSYEM PROGRAMMING LOOPHOLE

Cable TV companies will no longer be able to use a federal loophole to withhold sports networks and other popular programming they own from satellite providers and other rivals. This after the Federal Communications Commission voted 4-to-1 on Wednesday, January 20th to close the so-called terrestrial loophole that was written into a 1992 federal cable regulation law.

Under that legislation a cable TV provider must let competitors carry any channel it owns if satellite connections are used to transmit the channel to the individual cable systems around the country. Until now, the provision didn't apply when cable operators sent programming over land-based networks instead. As a result cable companies have been using the loophole to withhold sports and other programming from competing services. Now that the quirk in the law is gone, satellite and phone-line television providers are calling it a big win for consumers and fair competition in the marketplace. (Published reports)

**

RADIO ACCIDENTS: PHOTOS OF THE KWRM TOWER THAT SNAPPED IN HALF

High winds may be to blame for the recent toppling of an AM radio station tower out in Corona, California.

One person speculates that a gust in excess of 100 MPH during a tornado watch may have been involved. This, since the KWRM towers have withstood very high winds in the past.

The station is currently investigating to determine the exact cause of the structure's failure. Photos of the felled tower can be seen at the http://earthsignals.com/add_CGC/Images/KWRN_tower_down.html (CGC)

**

NAMES IN THE NEWS: KQ6FM NEW RADIO SHOW IN MONTEREY CALIFORNIA

And as most of you know, many of the voices you hear on Amateur Radio Newsline have professional careers as news reporters and voice over talent. Some even have their own radio shows and that includes our own Don Carlson. KQ6FM.

Thanks to the magic of modern digital communications, Don has just begun a new gig at a new radio station in Monterey, California known as Z-97.9 FM. What's so neat about this is that Don does the show from the comfort of his own studio in Reno, Nevada. Its then sent digitally to Monterey where the voice of Don as D-J Don Murray is heard playing the greatest hits of the 60's and 70's over Z97.9 from 10 in the morning until 2 PM in the afternoon, local Pacific time.

You can read more about Don the radio air personality and his new job at http://www.z979fm.com/The-DJ-s/5304063 (ARNewsline(tm))

**

THE SOCIAL SCENE: INTERNATIONAL DX CONVENTION IN APRIL IN CALIFORNIA

Turning to the ham radio social scene, the 61st Annual International DX Convention sponsored by the Southern California DX Club will be held April 16th to the 18th at the Holiday Inn Hotel and Conference Center, in Visalia, California. This is the premiere DX gathering in the world with top names from around the world in attendance. More information is on-line at www.dxconvention.org (IDXC)

**

THE SOCIAL SCENE: HEIL SOUND TO AGAIN HOST HAM RADIO RECEPTION AT NAB

Heil Sound Limited and BSW will again co-host the annual Amateur Radio Reception at the 2010 National Association of Broadcasters Convention to be held this spring in Las Vegas, Nevada. The event is slated for Wednesday, April 14th from 6 to 8 PM Pacific time at the Hilton Las Vegas Convention Center Hotel. The hotel is right next door to the Convention Center. Just bring your NAB badge to get in.

Again that's Wednesday, April 14th from 6 to 8 PM Pacific time at the Hilton Las Vegas Convention Center Hotel for the 2010 Amateur Radio Reception co-hosted by Heil Sound Limited and BSW. We hope to see some of you there. (Heil Sound via Facebook)

THE CHANGING OF THE GUARD: FORMER ARRL FOUNDATION DIRECTOR PETE HOOVER, W6ZH - S.K.

We have said this way too many times in recent days and we find ourselves saying it again. That being the changing of the guard in amateur radio which continues with word of the passing of Herbert Hoover III, W6ZH, on February 4th at the age of 82.

A resident of the Los Angeles suburb of San Marino, "Pete" as he was known in the ham community was a grandson of United States President Herbert

Hoover. He was also the son of former IARU and ARRL President Herbert Hoover Jr, W6ZH whose callsign Pete adopted.

Pete Hoover grew up in California, where he was an electrical engineer and venture capitalist. And following in his family's tradition of public service he was elected to the board of the National Red Cross which later became the American Red Cross Board of Governors. Although he never lived in his grandfather's home state of Iowa, he was active as a trustee with the Herbert Hoover Presidential Library Association in West Branch.

But it was to amateur radio where Pete Hoover, W6ZH, devoted a lot of his time and personal wealth. An ardent supporter of the ham radio space program in the 1970's, Pete and the late Bill Eitel, W6UF, jointly established a matching fund to encourage contributions to the amateur satellite program.

Pete was also involved in several important ARRL activities. He served as a Director of the ARRL Foundation in 1976 and as a member of the ARRL Long Range Planning Committee from 1978 to 1981. Locally, W6ZH, served as Vice President and Trustee of the Pasadena Radio Club and was also a longtime member of the Southern California DX Club.

Pete Hoover, W6ZH, is survived by his wife Meredith, his son Stephen Hoover, his daughter Leslie Hoover-Lauble along with his grandchildren and great grandchildren. In lieu of flowers, the family requests donations be made to one of several charitable institutions: Doheney Eye Institute, 1490 San Pablo St., Los Angeles, CA 90033, Hoover Institution, 434 Galvez Mall, Stanford University, Stanford, CA 94305-6010, Herbert Hoover Presidential Library Assoc., 302 Parkside Drive, West Branch, IA 52358, House Ear Institute, 2100 W. 3rd St., Los Angeles, CA 90057

A future memorial service is being planned. (ARNewsline(tm) from various published reports)

HAM KILLED IN POWER PLANT INDUSTRIAL ACCIDENT

A ham has lost his life in an industrial accident at a power generating facility that is under construction in Connecticut. According to the Shore Point Amateur Radio Club, member Chris Walters, N0HVK, of Florissant, Missouri, was one of five workers killed in the Sunday, February 7th explosion at the Kleen Energy Plant near the city of Middletown, Connecticut.

Walters, a 48-year-old father of three was in Connecticut to work a temporary job as a safety manager for an electrical subcontractor at the plant where the accident occurred. According to Middletown Mayor Sebastian Giuliano the workers were purging a natural gas pipeline when the explosion occurred. The cause of the accident remains under investigation.

In a posting to its website the Shore Point Amateur Radio Club said that Walters has been a member of the club since October of 2009. It said that

N0HVK embodied the spirit of amateur radio by volunteering for community events such as walk-a-thons, fundraisers and by attending club meetings. He was also a part of the club's first Field Day.

Chris Walters, N0HVK, is survived by his wife Fran and three children, ages 10, 13 and 15. The Shore Point Amateur Radio Club says that it plans to take up a collection to assist the family. (Southgate, telegraph.com, CBC)

EMERGING TECHNOLOGY: NIST UNVEILS THE WORLDS MOST ACCURATE CLOCK

Researchers at the National Institute of Standards and Technology have produced what they call an enhanced version of an experimental atomic clock. One based on a single aluminum atom that is more than twice as accurate as the previous pacesetter based on a mercury atom.

The new clock is the second version of NIST's "quantum logic clock. It derives its name from the fact that it borrows the logical processing used for atoms storing data in experimental quantum computing. This is another major focus of the same NIST research group.

According to measurements to be reported in Physical Review Letters, the new aluminum atom clock should neither gain nor lose one second in about 3.7 billion years.   (Science OnLine)

**

HAM HAPPENINGS: GB10GKA TO REMEMBER PORTISHEAD RADIO

If you are a follower of radio history then this is for you. As you may be aware, Portishead Radio using the callsign GKA was a radio station in England that provided worldwide maritime communications and long-range aeronautical communications from 1928 until 2000. At its height of operation it was the world's largest and busiest radiotelephony station that in 1974 employed 154 radio operators who handled over 20 million words per year.

Now, to mark the 10th Anniversary of the closure of Portishead Radio the special callsign GB10GKA has been authorized from April 30th through May 27th. Operations will be on all High Frequency bands with each position manned by an ex-GKA Radio Officer.

Communications will primarily be on CW. Hours of operation will be dependent on individual operator's free time. More information about Portishead Radio can be found on-line at www.gka.btinternet.co.uk. (GB2RS)

DX

In DX, word that TX4T is the callsign of F6BEE, FO8RZ, G3TXF, and VE2TZT as they activate Tahiti on 160 through 10 meters through February 24th. They hope to take part in the CQ WPX RTTY Contest (on February 13th and 14th as well as the ARRL DX CW Contest the weekend of February 20th and the 21st. QSL via the bureau to G3TXF.

N7MSU should be on from Belize as V31SU through February 24th. His operation will be on CW and SSB concentrating on 40 and 20 meters. QSLs should be sent to his home call either direct or via bureau.

And while kind of short notice, VK6DXI, will be in Zimbabwe through February 13th. While he does not have much time for amateur radio he still hopes to make some QSOs as Zed-21-D-X-I. If you work him please QSL via SP5UAF.

NE8Z will once again be in Ecuador and plans to be active through February 24th as HC1MD. Activity should be on 80 through 10 meters using CW, SSB, RTTY and PSK31. QSL via K8LJG.

DL1NL is currently active "portable OA4" from Lima, Peru. He will be there through mid-February mostly on CW from Radio Club Peruano as time permits. His recent activity shows he can usually be found on 20, 17 and 15 meters between 1530 to 1730 UTC. QSL via his home callsign.

N0RC will be active "stroke OX3" from Thule, Greenland between March 22nd and April 8th. His operation will be limited as work permits, but he plans to operate at least every other day. QSL to N0RC direct or via the bureau.

Lastly, our old friend John Abbruscato, W5JON, will again be operating from a hilltop QTH overlooking the Caribbean Sea, at Marigot Bay on St. Lucia. Listen out for him as J68JA from March 2nd to the 11th on 160 through 6 meters. QSL direct to W5JON. He adds that as in the past, his XYL Cathy,W5HAM, will be very busy pool side.

(Above from various DX news sources.)

**

THAT FINAL ITEM: TALKING THROUGH ROCK

And finally this week, the story of a young experimenter who is taking communications underground. And his work might save lives. We have more in this report from Amateur Radio Newsline's Norm Seeley, KI7UP:

--

According to National Public Radio, caves are some of the last places in the world left to explore. And while cave exploration or caving is relatively safe, if something goes wrong a rescue can take days or longer.

Part of the delay is because cell phones, walkie-talkies and most radio systems simply do not work when trying to communicate underground through hundreds of feet of solid rock. But now a 16 year old New Mexico teenager named has Alexander Kendrick has developed a device that may make it possible for someone trapped hundreds or even thousands of feet under the Earth's surface to text a message for help.

NPR says that Kendrick's device looks something like a computer attached to a ham radio transceiver. But ham radio it isn't because it transmits data using ultra frequency radio waves that can penetrate rock more easily than on the high frequency or VHF bands.

The first test of Kendrick's cave communications device was at the famed Carlsbad Caverns in New Mexico. Kendrick was at the 950 foot level below the surface and transmitted the single word "happy" to a receiving station manned by his father directly above. The screen on the surface displayed only the letters "a-p-p-y." Not 100% copy bit in an emergency situation more than enough to alert rescue workers of a cave explorers need.

Even at only this level of success observers believe that Kendrick's invention holds the potential to significantly speed the rescue process with the ability to text from underground caves. They say that it may have other applications as well.

As far as we can determine, Alexander Kendrick is not a radio amateur. No matter, because for his development of this new underground texting communicator he was named as the winner of the 2009 International Science Fair. As such, he was awarded a new computer, a trip to Switzerland and a $12,000 cash prize. We say congratulations on a job well done.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

You can read and hear more about this remarkable teenage inventor at http://www.npr.org/templates/story/story.php?storyId=123116417&ft=1&f=1001

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, The RAIN Report, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

Before we go, a reminder that the nominating period for the 2010 Amateur Radio Newsline Young Ham of the Year Award is now open. Each year, we here at the Amateur Radio Newsline in association with Vertex Standard Corporation -- the makers of Yaesu brand ham radio gear -- and CQ Magazine combine to honor a ham radio operator age 18 or younger for his or her contributions to ham radio or to society itself through ham radio.

All nominations and materials required by the official rules must be received by Amateur Radio Newsline no later than midnight on May 30th. Both "mail-in" and electronic submissions are being accepted this year. Full rules and a downloadable nominating form are now on our website at www dot arnewsline dot org. Just scroll down until you see "2010 Young Ham of the Year Awards Now Being Accepted" and click on the word "here" to download the directions and the form. We look forward to hearing from you.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Frank Haas, KB4T, saying 73 from Holly Hill, Florida, And as always, we thank you for listening.

> One reason I can see is that in an emergency situation the big Lister can be fixed with minimal tools and parts. Another is that even a small one isn't going anywhere unless it's on a trailer. Still another is the ability to buy and fabricate parts - everything is so big.
>

I don't think your avarage guy (or gal) is going to be able to do what that guy did, and even he had to have some spare parts on hand to keep his generator on line. They had issues with injectors and fuel lines that required parts that where not on hand or available from the hardware store up the street. This was far from a "build it all yourself" power generator. So I don't think your comparison to ham radios is a fair one.

However, it does underscore the need to have alternate power sources to power our radios. Batteries are great, but they need to be charged, generators are wonderful, but they need fuel. Thinking though these things and comming up with a long term plan to deal with likely emergency situations is the key. Then actually testing to make sure it will work is something we need to get done.

For instance, I live in the Dallas area so I have to consider what kind of emergencies I might face. Hurracaines are not likely, but tornados and ice storms are. Short term power outages are likely, long term outages a lot less. My current plan deals with short term outages using batteries and things I can operate/charge in my car. If I am faced with a long term outage, I have the ability to move far enough away to get out of the area that is likely dammaged. What you need are plans to use what you currently have that have been tested.

Being preaired is not that hard or expensive and doesn't depend on being able to build my equipment from scratch. It depends on being able and ready to deal with the likely situations I will face with the equipment I now have. And like the rest of you, I'm into collecting more radio equipment so I also consider how that new radio fits into my emergency plans or what I need to make my current radios work in that new car. It's having that necessary power cable, that cable adapter, or that coax jumper needed to make your radio work with that antenna you just purchased, and knowing where this stuff is when you need it in the middle of the night when the power is out and your flash light batteries are about to give up.

You have to plan, test, evaluate, improve and repeat to be the most effective when the emergency hits. Simple may be better, but this doesn't mean you have to be able to run CW from a self built tuna can built out of scattered house parts using a wire thrown into a tree after an F4 levels your town. It means you have a workable plan that has been practiced that can get you on the air in as many situations as possible with what you have on hand.

My own emergency powering system consists of solar panels and
batteries.

I am building it in a stepwise fashion. The local Harbor Freight
occasionally has sales on small solar panels. My goal is to eventually
have 50 watts worth of panels. I'm at around 5 watts now, and charging
batteries with it. I run HF at around 50 watts, in fact used it for
last year's field day as a off-the grid demonstration with my Kenwood
480. Took it the whole way from full power to qrp levels and it worked
well at all of them. 50 Watts seemed to be the best compromise between
desired power and battery life. After draining the battery, I switched
to QRP.

But when I reach the 50 watt level, I expect the cells and batteries
to keep up pretty well.

March 2010 issue of QST, page 35:
"After moving in, I was told this CR also applied to any outside antennas, because the might possibly be visible to the neighbors. Drat -- time to come up with a compact stealth mode antenna..."

Here we go again. Another signed contract and another evasive maneuver around it.

Now while it is my understanding that the whole purpose behind the PRB-1 thing was to keep cities from preemptively banning any antenna structure. It does not allow you to just ignore contracts that you sign.

Am I missing something here?

> Am I missing something here?

Maybe. 1) How is the contract worded with regard to antennas? 2) No CC&R can prevent a homeowner (of a single family free-standing house) from erecting a television receiving antenna (within limits), so all it'd take is disguising a ham antenna as a tv antenna and he may not be breaking the terms of the contract. Of course a tv antenna might look odd if he lives too far from any tv transmitting antennas.

First, we have the OP saying he "was told" about this (apparent) interpretation of the CR; maybe that's not what it says at all.

Further, he says that the reason for this (apparent) interpretation was that the antennas "might possibly be visible to the neighbors."

Making an antenna which was not visible would appear to meet the requirement of this (apparent) interpretation.

Jeff,

You are missing the fact that the Commissars of The Public Morality
want to turn all ham operators into subservient sheep who must humbly
beg their betters for the privilege of doing something unusual. Anyone
who does anything that's not expected is a danger to the Public
Morality! You must conform!

Gotta go; there's a helicopter circling overhead and I can't hear
myselfthink.

Bill, W1AC

Right, but my point was, and still is, "What part of no don't you understand?"

I know there's a few real lawyers involved specifically with antenna issues and
amateur radio, but why is it everyone else jumps in their favorite armchair and
puts on their lawyer hat and immediately tries to find every possible excuse to
get around the "no antennas" clauses they've agreed to?

There are additional issues now regarding RF radiation. This trapped vertical

I referred to in the March 2010 QST for example. How would his neighbor
upstairs feel about sitting on top of an active radiator putting out
somewhere
in the neighborhood of 100 watts?

People tend to go sideways about cell phone towers within sight of a school
yard. That's a LOT less radiated power than 100 watts under your feet.

....But at a *much* lower frequency. Or doesn't that matter? Anyway, there are guidelines, for hams, with regard to ERP and required distance. No responsible ham would transmit 100 watts physically nearby on any frequency. I made sure I included the adjective "responsible."

Once again, we don't know what is in that fellow's contract. In one place I lived it said "no antennas without permission," and that was before the FCC mandate to allow tv antennas and small satellite dishes. As I wrote once before, I didn't ask, I erected an antenna, and no one ever complained.

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
    2.1 Netiquette guidelines
    2.2 Posting form requirements
    2.3 Guidelines on signature (.sig) files
    2.4 Guidelines on excessive quoting
    2.5 Guidelines on pointers to outside sources
    2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
    2.7 Guidelines regarding name-calling
    2.8 Guidelines regarding civility
    2.9 Other unacceptable topics

---

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/
d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.
